More sharing

Claris' XTND turns MacDraw Pro into a "graphics hub" for all your applications. You can import virtually all clip art files using the formats above and output your finished work in an EPSF file for precision publishing.

MacWrite Text Ruler

Scanned Image

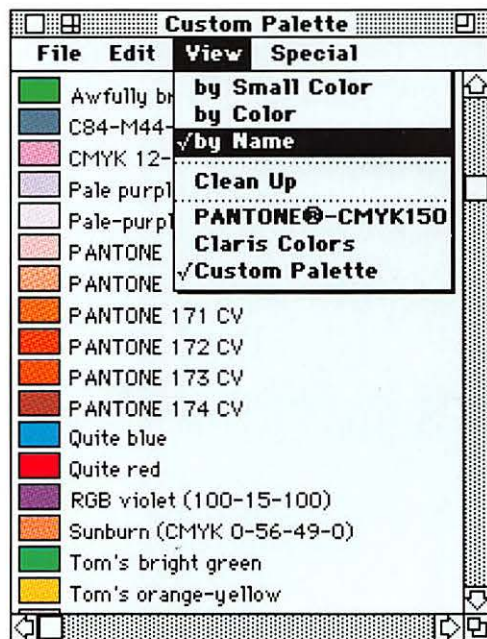

Imported Graphic

The purpose of letters is the practical one of making our thoughts visible. In the choosing of any typeface to convey a message certain factors will be applicable. Context frequently contributes to decisions regarding type style, size and weight.

Imported Text

More publishable

MacWrite-style text handling gives you full formatting power in every paragraph of every text block. Composing text, scanned images and graphics is simple.

More colorful

Create custom palettes, choosing from millions of colors—including standard PANTONE® colors. You can also custom-name colors for faster, easier reference.

Work be like if MacDraw Pro?

More productive

MacDraw Pro lets you concentrate on your work, and not on the software. When needed, context-sensitive help is always available.

Well rounded

Imagine drawing true Bézier curves without handles. (You can draw the figure above with just nine clicks. Try it.) There's no easier way.

More graphic

You have three customizable ways to add highlights or shading to your graphics and presentations. You'll look more professional, both on screen and on paper.

New Product

More Rewarding

Could your job use some exciting changes? Well, here's our best idea yet: the new MacDraw® Pro.

We've taken the graphics tool you know and love—MacDraw II—and stuffed it with power and new features. More than 100 new features in all.

Yet for all its graphic power, MacDraw Pro remains one of the most comfortable and accessible tools since the T-square.

It's the ideal, all-around graphics software for presenting, publishing, designing and illustrating!

Allow us to illustrate.

Curves. A hassle with most drawing programs; no big deal with MacDraw Pro. Just use your mouse to click out the general shape you want, and presto. If you need more precision, you can use standard Bézier handles to fine-tune what you've drawn.

Colors. With MacDraw Pro you create your own custom palettes, and keep as many open as you wish. You can even name each color, so your "logo blue" is never confused with your "sky blue."

Text. It's the Achilles' heel of most graphics software—but not this one. You'll work with the same powerful formatting tools that our MacWrite® II software is famous for.

The result: instead of inventing unheard of tools that do new things, we let you use familiar tools to do unheard of things. In other words, simply powerful software.

But why read about it? Just visit your nearest Claris dealer. And draw your own conclusions.

They are all on the same page!

Of course, that's *only* when you're using RagTime 3, the first truly integrated productivity tool for the Macintosh®. RagTime 3 lets you create documents and forms with text, spreadsheets, graphs and pictures on a single page – without moving back and forth between applications.

In no time you'll be able to edit and format text. Quickly generate pie charts, bar, line and area graphs, and scatter plots. Place imported pictures with precision. Produce presentation quality spreadsheets with impressive features like full typographical control, rotated and wraparound text cells. *All on a single page!*

But the most powerful feature of all – the **Hot Link** – lets you do what no other program can: dynamically link spreadsheet cells to other spreadsheets, text references and graphs.

In short, document processing was never easier than with RagTime 3's seamless integration. For more information call us toll-free at **800-875-9632**.

Setting the standard for Macintosh integration.

Text: Full-featured multilingual word processing. Text frames provide spell-checking, hot links to spreadsheet cells, multi-column WYSIWYG layout, mailmerge, type macros and more.

Spreadsheet: Offers presentation-quality formatting. Includes over 80 mathematical, financial and statistical functions, hot links within and between documents, rotated and word-wrap cells.

Graph: Present your data using category, X-Y and pie graphs, overlay, stacked and logarithmic charts. Graphs have hot links to spreadsheets for automatic updating of information.

Picture: Full Apple 32-bit QuickDraw compatibility. Import TIFF, EPS, PICT, PICT2 and more. Make grayscale and color adjustments to your TIFF images. Scale, crop, and rotate graphics in 90° increments. Scan directly into RagTime picture frames!

Our Newest Introduction.

Color monitor illustration by Rob Mageira.

Since 1985 Ehman has been a leader in providing high quality peripherals to the Macintosh market. Our hard drives, monochrome monitors and removable drives have been a mainstay

to the industry, with a name that is well known and highly respected.

Now allow us to introduce the newest

All hard drives come bundled with your choice of two utility software packages and a 2-year warranty.

*Disk Doubler not available with 45MB removable

member of our family; 20 inches of 8-bit and 24-bit color in high quality, 72 DPI monitors that end users will love, and budget watchers will adore.

The new Ehman 2-page color monitors are as affordable as they are practical. Backed up by a one year warranty and our 30 day money back guarantee, the price tags once again demonstrate Ehman's commitment to value on the most popular peripherals.

The other members of the family are just as cost conscious. From the impressive 210MB drive to our popular 45MB removable and the highly

No Introduction Needed.

"At \$899, Ehman's Two-Page Monochrome display is an excellent buy."

MACWORLD, MAY, 1991

"If you want a full-page display, we recommend the Ehman: it's rare to find such high quality and low price (\$499) in the same monitor."

FAST PATH. FASTER PATH.

This is about something no new product announcement should be without. Words that end in e-r: like newer, better and faster. Words that best describe FastPath® 5, Shiva's new generation of the leading, most reliable LocalTalk-to-Ethernet gateway.

FastPath 5 is better. It has a LocalTalk I/O processor that can handle all the traffic a LocalTalk network can support and more. It has a larger memory, too; 512K to store and route more information than the most complicated networks can handle. Plus Shiva has given FastPath 5 support for more

FASTPATH SUPPORTS SEAMLESS CONNECTIONS WITH APPLETALK PHASE 1 AND PHASE 2, TCP/IP, DEC-NET, SNMP, AND IPTALK PROTOCOLS.

types of Ethernet connections — Ethernet thick and thin, the Apple Ethernet Cable System and 10BaseT. And for a limited time, Shiva is giving away a free copy of NFS/Share software with each new FastPath. NFS/

Share lets Macintosh users take full advantage of NFS servers on their Ethernet network.

Now, back to the best e-r word of all. Power. In the form of the Shiva Network Manager. A powerful program that lets you configure and manage your entire network from one location. Which

THE SHIVA NETWORK MANAGER ALLOWS YOU TO CONFIGURE AND MANAGE ALL OF YOUR SHIVA PRODUCTS FROM ONE LOCATION.

comes in handy when there are over 100 FastPaths on the line.

But what if you're one of the thousands using FastPath 4? Shiva's made it easy to get a free upgrade kit (which includes software and a

PROM, a \$149 value), or a special offer on a trade-in if you act before September 30, 1991.*

Take advantage of our free upgrade, or our special trade-in. Just call 1-800-458-3550. Or 617-252-6300. You may find that by using the newer, faster, better gateway, your stature around the company will, well, get bigger.

Shiva FastPath®5
Shiva Corporation, One Cambridge Center, Cambridge, MA 02142

*Trade-in offer is good for any FastPath or competitive hardware products. The trade-in enables you to purchase a FastPath 5 at \$1,299 until September 30, 1991. The free PROM and software upgrade is limited to one per company — additional PROMs can be purchased in ten packs for \$150. All product names are trademarks or registered trademarks of their respective manufacturers.

Now Kodak delivers superior imagesetter results with Kodak Pagi-Set films and papers—and Kodak Precision imagesetter linearization software.

It's an unbeatable combination: Kodak Pagi-Set HN and IR films and papers for superior density and image resolution with helium-neon and infrared imagesetters. And Kodak Precision software for calibrating your imagesetter—so halftones, screens and tints are dead-on.

Pagi-Set products help make the most of the desktop publishing medium, whether you're creating type, graphics, halftones or color separations—to paper page output, or plate-ready film negatives or positives.

Kodak Precision software calibration tables are stored in the RIP, and the correct table is automatically chosen each time for accurate, predictable halftones or color separations, without costly remakes. For details, talk to your supplier or dealer, or call 1 800 242-2424, Ext. 724. In Canada, call 1 800 465-6325, Ext. 3318.

Kodak. Your competitive advantage.

The Evolution of CAD

From the beginning of time, man has tried to express himself through graphics.

In the beginning man had to use primitive tools for creating graphic designs.

In the 15th Century design tools were quill ink pens and crude styles of paper.

By the 18th Century man had advanced to the drafting table with the T-squares, slide rules, precision ink pens and the dreaded eraser.

In the 20th Century the first CAD programs were very slow and extremely difficult to use, not to mention the expense of buying them.

As programs became easier to use, they thought they were radical and intelligent, but lacked real CAD power.

Now step into the 21st Century...

DesignCAD 2D/3D

The power of intelligence!

MACBULLETIN

21-Inch Apple Monitor Sparks Protest

A 21-inch color monitor that Apple is expected to announce in early June is being protested by some third-party monitor makers and international distributors who say the monitor will hurt their business and possibly reduce the number of distributors who carry Apple-related products internationally. The two-page monitor will be made by FIMI, a subsidiary of Philips Italy; will have reduced magnetic-field emissions; and will be bundled with an 8-bit graphics adapter, according to sources inside Apple and at third-party vendors briefed by Apple. "If they bring it out, then companies such as RasterOps, Radius, SuperMac, E-Machines, PCPC, and others will probably find that their [large-screen] 8-bit sales will drop off completely," said Randy Green, executive director of the Federation of International Distributors, a not-for-profit association in Boston. The monitor's features, combined with the Apple logo and a rumored low price, could be deadly for the third-party vendors, according to Green. Green and the third-party sources said that Apple had already made a concession by not bringing the monitor out in the United States. However, the monitor is expected to be available in Canada and Mexico, making a U.S. gray market possible.

Quark and Scitex Settle

Quark and Scitex have settled a dispute that forced Scitex to stop marketing Visionary, a version of QuarkXPress that can read Quark files and send them to a Scitex prepress system. Quark, which developed Visionary for Scitex, wanted Scitex's permission to make Visionary capable of saving files in a format that QuarkXPress could read, but Scitex refused. The agreement calls for Scitex to take over Visionary and develop it as an add-on to QuarkXPress. The Visionary Xtension, as the new product will be called, will probably not allow QuarkXPress to open its files.

What's True at Letraset

FontStudio 2.0 can create TrueType fonts and convert Type 1, Type 3, and LetraStudio fonts to TrueType format. It can also interpolate between heavy and light weights to create intermediate weights, and automatically add hinting. It lists for \$595. LetraStudio 2.0 incorporates Pantone's tools for precise matching of Pantone, RGB, and CMYK colors; antialiases the color channels as well as the black; imports Illustrator 3.0 outlines directly; and sup-

ports copying and pasting the "envelopes" that contain font-manipulation information from one block of text to another, as well as saving envelopes as templates. It can perform distortions on all four sides of a text block at one time, and screen-rendering speed is greatly increased. Pricing for LetraStudio 2.0 was not set at press time. Letraset is at 201/845-6100.

Farallon Rewrites Sound Edit to Work with 6.0.7

Farallon Computing said recently that it has rewritten its Sound Edit utility to enable its Sound Recorder to work with Apple's new Sound Input Manager in System 6.0.7. Apple designed Sound Input Manager to work with the microphones and other hardware included with the Macintosh LC and the IIsi, but the software was incompatible with several third-party sound-editing utilities, according to Farallon. For upgrade information, contact Farallon at 415/596-9100.

Apple Says Macintosh Shipments Up by 85 Percent

The total number of Macintoshes shipped in Apple's second fiscal quarter was up by about 85 percent over the same quarter a year ago, Apple said. Apple chairman John Sculley attributed the increase to the company's strategy of lowering prices and gaining market share.

Rush Hour

One of the first announced utilities for managing the complexities of System 7.0 is Traffic Controller, which will monitor AppleEvents—communication between applications—and enable users to intervene by, for example, redirecting an IAC call to a different application. Traffic Controller will also let users examine a log of publish-and-subscribe relationships; keep several iterations of intertwined files and roll them back to earlier versions; and provide information about network AppleEvents for network administrators. Single-user Traffic Controller will list for \$129, and the network version for \$249. For more information, contact Tactic Software at 305/378-4110.

Toshiba Shows Speedy CD ROM Player

Toshiba America Information Systems has announced the TXM-3300A, a fast CD ROM player with an average access time of 325ms. Unlike most CD ROM players, the drive has improved seals to prevent *(continues)*

contamination by dust, and it automatically cleans the read lens for greater reliability. The TXM-3300A, slated to ship in July, comes in versions with interface kits for IBM PCs and compatibles or Macs. The Macintosh version will have a suggested list price of \$895. For more information, contact Toshiba at 714/583-3000.

Ethernet Hits New Low at \$199

Start-up vendor Sonic Systems says it has begun shipping two series of Ethernet boards for Macs at a cost of \$199 each, considerably less expensive than other Ethernet devices. The Ether TnT series all have a thin Ethernet interface, and the Ether TwT series of 10BaseT boards connect via twisted-pair cable. All the boards are compatible with AppleTalk Phase 1 and Phase 2 protocols, which means they can communicate using those protocols over Ethernet and connect more easily to AppleTalk networks. The company said it ships both series in versions that work in the Macintosh SE, SE/30, LC, and all Macintosh II machines. The \$199 price is a firm figure, since the company sells direct. For more information, contact Sonic Systems at 408/725-1400.

Kodak Gives Away Color Tool

Eastman Kodak is releasing a public domain utility for decompressing color images compressed with the company's Colorsqueeze, a \$179 application. The utility is available on most online services. Kodak is also developing a system to convert images from photographic film to digital format and save them on a CD ROM. Kodak is at 716/726-3437.

HP Drops Price of DeskWriter Again

Hewlett-Packard recently cut the suggested retail price of its popular DeskWriter ink-jet printer for the Mac from \$995 to \$729. The cut came not long after Apple introduced its low-cost StyleWriter and Personal LaserWriter LS. For more information, contact HP at 800/752-0900.

AppleTalk's New Voice

Like most network-management tools, TalkManage can watch activity on a network; decode packet headers; and record traffic levels, transmission errors, and similar information, and display the information in real time on a histogram. But it also has some unusual features. Currently shipping version 1.4 can send a message on its own or use QuickMail to inform someone when a network event triggers an alarm—for example, informing the net administrator when a device disappears from the net. TalkManage generates a map of a network (in 1.4 the map is resizable) and provides tools for analyzing network layout and designing more-efficient networks. From within TalkManage you can also configure most AppleTalk routers, including those from Cayman Systems and Shiva. Version 2.0 will provide similar tools for Ether-

nets, including configuring a VAX-based Ethernet using DEC's DECMCC; will be able to send messages with Microsoft Mail; and will support the Simple Network Management Protocol, which Apple has finally settled on as its AppleTalk standard. Pricing depends on network configuration. For more information, contact Distributed Technologies at 617/684-0060.

Silicon Graphics to Discontinue Mac Development?

Silicon Graphics Inc. (SGI) recently said that it will likely discontinue any development of its highly regarded IRIS 3-D graphics software for the Macintosh. In early April Silicon Graphics signed a technology agreement with Microsoft to integrate SGI's IRIS Graphics Library into Microsoft's applications and system software. At the same time, Compaq Computer and SG announced a strategic relationship and Compaq acquired 13 percent of SGI's stock.

Apple II Board for the Mac LC Shipping

Apple said it has begun shipping the Apple II emulation board designed for the Macintosh LC. The Apple IIe Card was designed to let schools and others buy Mac LCs without losing the benefit of the Apple II software they already have. The board is compatible with most of the thousands of Apple II applications, according to Apple, and can support an external Apple II 5¼-inch floppy drive and an Apple joystick. The card's suggested retail price is \$199. For more information, contact your Apple dealer.

The Future of Fax

The TR-29.2 committee of the Telecommunication Industry Association is establishing a new fax-modem standard, Class 2, which moves responsibility for timing control from the computer to the fax chip. The committee may also require fax-modem chips to detect when the computer's serial port overflows and loses data. Committee member Tom Evslin, whose company Solutions markets Macintosh fax-modem software, says the Mac's tiny 3-byte serial port buffer is especially vulnerable to data loss, and that on-chip detection would let fax modems run reliably in the background. Class 3 modems, which are years away, will free up the computer from imaging tasks—for example, converting QuickDraw or PostScript to a fax bitmap.

DiskExpress Ready for System 7

Version 2.07 of the disk-optimization utility DiskExpress II is designed to cooperate with System 7's complexity. It can defragment a volume that several people on a network are sharing with FileShare, without disturbing users' access privileges; notice and optimize around blocks marked as unusable by System 7; and operate in virtual memory and large RAM environments. It will list for \$89.95. For more information, call ALSoft at 713/353-4090. ■

PixelPaint Professional® 2.0

Available
NOW

Paint Takes On A New Perspective.

Redefining the Paint Category

PixelPaint Pro *defined* the category of Professional Color Paint. Now, version 2.0 extends the Paint category into artistic image processing. Demanding designwork requiring image compositing, 8-bit masking, transparency and antialiasing or special effects such as embossing, patterning, tinting or controlled warping is dramatically simplified. Photographs can be turned into spectacular art with a few commands or brushstrokes. And precision controls and full color separations mean your designs come out looking the way you expect them to look.

While Better Simulating Traditional Paint

And, if you enjoy working with physical media, Pro 2.0 has the tools you've been searching for! PixelPaper™, which simulates textured surfaces such as linen, charcoal paper or even concrete, and pressure sensitive brushes, charcoals, pastels and airbrushes, combine to create outstanding, natural, painterly effects on a computer. In autoscrollable documents up to 4000 x 4000 pixels. All with the flexibility of Macintosh®-assisted design—Pro 2.0's object-oriented paint tools allow you to continue manipulating your strokes before applying them to your image.

With Second Generation Interface Breakthroughs

A second generation in Paint, Pro 2.0 is easier to use than ever before because the interface has been redesigned with the designer's needs in mind. Floating palettes and multiple documents allow you to immediately access and apply tools without climbing through a jungle gym of menus. And, with Balloon Help under System 7.0, Pro verbally tells you what each tool will do.

Buy PixelPaint Professional 2.0 now and receive a CookBook tutorial (\$19.95 value) free when you return your registration card. Call 1-800-624-8999 (x. 210B) for more information about Pro 2.0.

Remember the first day you got your hands on a Mac?
Remember how excited you felt when
you saw all the things it could do?
This may refresh your memory.

Introducing WordPerfect® 2.0.

Every once in a while a new product comes along that sparks the same kind of excitement you may have experienced with your first Macintosh (you stayed up half the night, right?). As we've shown new WordPerfect® 2.0 to Macintosh users around the country, we've seen a very similar reaction. First eyes open wider. Then heads start to nod. Followed by grins that stretch dimple to dimple.

Here are some of the more graphic improvements.

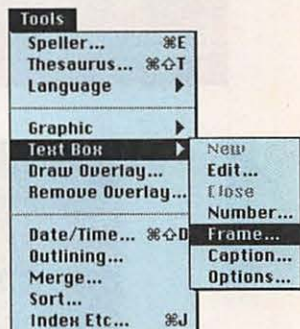

We built a graphics and drawing package right into the program. With WordPerfect 2.0, you don't have to leave your document to incorporate graphics. You can create, edit, size, scale and crop graphic figures just by clicking "graphics" or "draw" on the pull-down menu. The palette includes all of the standard drawing tools, plus Bezier curves, polygons and a free rotation tool.

WordPerfect 2.0 also lets you create text boxes. Inside your text boxes you can change font size and attributes. Then you can drag your text box wherever you want in your document and the rest of your text will wrap around it automatically.

The list of new features could fill a page. Or up to 24 columns.

By clicking and dragging icons on the new WordPerfect ruler, you can create columns (newspaper or parallel) and then adjust the column settings, align text, set tabs, change line spacing, move margins and do a number of other formatting changes to your document.

Want to add a border to text, paragraph, column, or page? Easy. WordPerfect 2.0 gives you 36 different border styles from which to choose.

Like working with Styles? WordPerfect not only lets you use them, you can also share your styles with other people on your network.

We've also added new features like

a Macro Editor, Tables of Authorities, and Line Numbering. And we've made enhancements to Merge, Search and Replace, and Macros.

Of course, what counts is how you feel.

See WordPerfect 2.0 up and running at your dealer. Better yet, buy a copy of WordPerfect 2.0 and load it onto your Mac. But when you try WordPerfect 2.0 for the first time, one word of warning. Don't plan on going to bed early.

For more information, call us at (800) 526-5034.

Improve VDT Safety Conditions

Six simple steps you can take.

At Curtis, we've been saying it for years. In San Francisco, it's the law. Use ergonomic accessories to improve computing comfort and safety.

1. Relieve eyestrain and fatigue, cut glare 95%, and absorb 98% of VLF radiation with a Curtis Glare Filter.
2. Relieve tired, aching wrists and organize your desktop with the Curtis Keyboard Organizer.
3. Keyboard at a more comfortable height—install a Curtis Keyboard Spacesaver.
4. Reduce eye fatigue—use a Curtis Clip to hold copy

and eliminate constant refocusing from desktop to monitor.

5. Position and adjust monitor to optimum viewing angle with a Curtis Monitor Arm—arm and platform both swivel 360°.

6. Improve monitor viewing comfort instantly with a Curtis Tilt & Swivel or Curtis Universal Monitor Base.

Don't take chances with your health and safety—start using Curtis accessories today. Write or call for your free "Tips to Computing More Comfortably" brochure.

For the Curtis dealer nearest you call (603) 532-4123 Ext. 42

What's Happening to Desktop Publishing

PART TWO: WORKING WITH PHOTOGRAPHY AND PREPRESS COLOR

BY JERRY BORRELL

Cooking instructions for using color in desktop publishing. 1. Obtain graphics file from a color scanner. (For this recipe use a 90MB file scanned on a Scitex system.) 2. Launch Adobe Photoshop in order to look at the file on screen. 3. Open

the file (assuming you're lucky enough to have the file in a format Photoshop can read). 4. Buy a larger hard drive. (Photoshop keeps a "scratch copy" of the image you have opened, requiring that you have disk space available that equals the size of the original file.) 5. Wait 35 minutes for the file to open. 6. Convert the file from CMYK mode to RGB mode in order to see it in color (this operation requires another 50 minutes). 7. Once the file is in RGB format, move the on-screen image (wait 3 minutes for it to redraw). 8. Save the file as, say, a PICT file (wait 15 minutes). 9. Now you can begin work. Allow 50 minutes (or more) for Photoshop operations such as applying a filter to the image, or 25 minutes to compress the image with Radius's ImpressIt.

Warning! These instructions apply only to ideal situations and may prove more difficult in practice.

How It All Got Started

A few months ago, assistant managing editor Luis Camus retrieved two test files from our color-separation house,

Luis Camus working with files that are shipped via ISDN to Macworld Japan. Ninety-megabyte files have presented some problems.

Balzer/Shopes. One was a 90MB file produced by scanning a 4-by-5-inch transparency, which was enlarged to fill the first two pages of our March hard drive article. The other was a 7MB file of another image that ran with the same article.

I had eagerly installed ImpressIt on our international file server and was preparing to compress the 90MB file

to a size that would be practical for Macworld Japan president David Ushijima to download in Tokyo via our ISDN link. It was Friday afternoon, the start of a pretty spring evening in San Francisco, and we had some new products to play with before taking off.

By 9 p.m. San Francisco time Luis and I were both calling our respective dates to explain that we had run into a few problems. So began our glorious venture into the world of four-color electronic publishing. I made a call to David in Tokyo and explained that we should wait a little longer before he tried downloading the image files for output on the kanji PostScript imagesetter in Tokyo.

How We Got This Far

This spring was an expectant time for us. Since May of 1989 Macworld has used desktop publishing technology. There is a bustle of behind-the-scenes activity required to put each issue of the magazine together. Every article is designed on the Macintosh, but type, illustrations, mechanical color, and

SIX REASONS WHY LA CIE HARD DRIVES ARE THE BEST YOU CAN BUY.

Quantum mechanisms are the best.
That's why we use them in La Cie hard drives.

1

A Quantum Difference.

Quantum drive mechanisms offer blazing-fast effective access time as low as 8 milliseconds.* No other drive mechanisms in their class (Mac-compatible) run faster, which is why they are in La Cie drives.**

*Typical application access time using 64KB DisCache®

**Seagate drive mechanisms also available (capacities from 300MB to 1.2GB).

Tsunami, Silverlining, La Cie and the La Cie Ltd. logo are trademarks of La Cie, Ltd., a Plus Development Company. All other trademarks are the property of their respective owners. All prices, specifications, terms, and descriptions of products and services herein are subject to change without notice or recourse. La Cie, Ltd. 19552 SW 90th Court, Tualatin, OR 97062. Phone (503) 691-0771, Fax (503) 692-8289. © La Cie, Ltd. 1991 All rights reserved. Printed in U.S.A.

2

Software with a Silverlining.

Every La Cie drive includes a FREE copy of Silverlining, the #1-rated hard drive management utilities program.

Silverlining drivers can get 30% more speed from a drive than the competition. It works with any true SCSI drive, internal or external. So one program can manage it all. Plus,

MacUser says, "Silverlining is one of the most powerful and useful hard disk utilities you can find—most Apple engineers prefer it to Apple's own."

Silverlining optimizes your data so it's consecutive on your drive, which makes your applications run faster.

And, Silverlining drivers are intelligent. They test the drives' functionality at startup to ensure that everything is working properly. If it's not, it protects you.

For even more protection, every La Cie drive includes a FREE copy of Norton Utilities® for the Macintosh. It automatically diagnoses, reports and repairs common and dangerous disk problems. Silverlining and Norton Utilities are regularly priced at \$149 each. So, you get software worth almost \$300—ABSOLUTELY FREE—when you buy a La Cie drive!

3

A Company You Can Count On.

La Cie is a Plus Development Company (makers of the Hardcard® XL), backed by \$400 million in assets. That means you can trust La Cie to provide a constant source of high-quality mechanisms and components. And you can be certain that we'll be around to help you with service and support. For a long, long time.

4

The Most Unusual Warranty in the Business.

La Cie features a RENEWABLE 2-YEAR LIMITED WARRANTY.† If anything goes wrong with your La Cie Quantum drive within two years, we'll repair or replace it within 48 hours—and then renew your warranty for another 2 years. Free of charge!

Every La Cie drive is backed by toll-free support from customer service and technical assistance experts.

†Restrictions apply. Please contact La Cie for complete warranty information.

5

Award-Winning Design.

Hard drives that win design awards? Who says intelligence has to be ugly? The Tsunami and Cirrus hard drives have received prestigious awards from both the industrial design and computer communities.

La Cie drives are designed from the inside out. Designed to be quiet (with a ½ speed fan), lightweight (as light as 2½ lbs.), durable and reliable. Plus, they have an external termination and SCSI address switch, which means you'll never have to open the case for any reason! You don't win awards for these features, but you do win a loyal following.

6

Rave Reviews from Critics and Customers.

Frankly, there's been a lot of talk about La Cie hard drives. Leading Macintosh consumer magazines praise us. Customers write us fan letters. In fact, we're happy to let critics and customers have the last word about La Cie drives. Because they tend to be words like these:

★★★★★ —MacUser

"...the cream of the crop." —Macworld

"Of all the drives tested we recommend La Cie's drive." —MacUser

"This is an excellent drive and Silverlining is great!" —D. Jordan
Burbank, CA

La Cie offers internal and external hard drives from 40MB to 1.2 Gigabytes. Choose from the award-winning Tsunami, Cirrus, ZFP Family and Internal drives. Plus, La Cie now offers the Bacster, a hard drive that attaches directly to the back of a Macintosh Plus or SE.

Sanjay Sakhuja (standing) and Eric Hudson of Digital Pre-Press International working with the Scitex SmartScan.

Leslie Barton of the Macworld design department placing 8-bit versions of scanned photographs in PageMaker.

four-color and continuous-tone image separations are produced by different service bureaus. These prepress processes are joined in a final step to produce the film that we send to Brown Printing, in Waseca, Minnesota.

In February we began to unite all these prepress processes and to produce film on an Agfa Compu-graphics SelectSet 5000. We had several reasons to push ahead with our use of the technology. First, we support other *Macworld* magazines around the world, and those publications can take advantage of our digital page separations (see Part One, *Commentary*, in the June issue). Our ISDN and Switch 56 network capability offers more-reliable phone connections and higher transmission speeds than standard transmission lines do, making it practical to download large story files to these foreign publications.

We also hope to reduce costs, speed production, and simplify processes such as accounting, by reducing the number of suppliers with whom we have to work, and gain greater control over the entire production process.

Finally, we feel an obligation to use the technology that we write about, rather than merely recording our observations of others' work. It helps keep *Macworld* articles useful. So if prepress on the Macintosh was actually becoming practical, we felt it was time to take the plunge.

Talks with Our Suppliers

As you might imagine, magazine editors become jaundiced by talking with developers—all of whom say they are

going to ship new products tomorrow. But as consumers of professional services from graphics arts suppliers, we demonstrated considerably more naïveté. When we began, we met with a multitude of prepress-service suppliers to discuss who would work with us on color publishing. When we asked for film output, the crowd thinned considerably.

Since placement of continuous-tone (CT) scans was crucial, we had to select a partner who had the highest-quality scanning equipment available. One of our suppliers already had Crosfield and Scitex scanners. But as a large business, this supplier seemed less than attentive to our need to push the technology forward, and mainly interested in building a business that would serve the existing customer base and expand into a new market.

One of the contenders, Sanjay Sakhuja at Digital Pre-Press International (DPI), agreed to buy a high-end scanner that would match in quality the Agfa CG 9600 and Agfa CG Select-Set 5000 imagesetters that his company already owns. He also cooperated by adding a direct connection to our digital (ISDN) network, enabling us to transmit files and images between *Macworld* and DPI at 64,000-bits-per-second. This makes Sakhuja's computers appear on our network as if they were actually in our building.

Sakhuja was uncertain whether to purchase a Scitex or a DaiNippon screen scanner; in the end he chose the Scitex SmartScan because it's faster to load with transparencies (since it uses a flatbed rather than a drum) and is semiconductor-based, (continues)

PostScript solutions for LaserJet printers haven't exactly set records for speed.

But times have changed.

In the past, patience has been a necessity for getting PostScript® quality graphics and text on a LaserJet IIP, III, IIID, or IIIP laser printer.

Introducing PacificPage XL™ for Macintosh – it will change the way you look at PostScript emulation products, both in performance and price.

PacificPage XL for Macintosh provides the newest version of the PacificPage P•E cartridge, our PacificTalk interface module, and a high speed accelerator board that installs into the printer's memory slot. Included on the accelerator board is an Intel i960™ KB RISC microprocessor and 2 MB of memory which produces output 2 to 8 times faster and at a lower price than competitive cartridge solutions.

PacificPage XL for Macintosh supports Adobe Type 1 and 3 outline fonts and utilizes

the Resolution Enhancement feature of the LaserJet III printer family for the sharpest 300 dpi output available. And, PacificPage XL for Macintosh comes

with a lifetime warranty and a money back guarantee of satisfaction.

If you're looking for

a change of pace in PostScript solutions for the HP LaserJet III printers, call your nearest dealer or contact Pacific Data Products Inc., 9125 Rehco Road, San Diego, California 92121, U.S.A., (619) 597-4651, Fax (619) 552-0889.

Circle 111 on reader service card.

John Warnock (left) and John Knoll's development of Photoshop will determine whether that product will allow the Mac to support professional prepress color work.

and thus more easily updated as technology changes. With this device he can scan 35mm, 125mm, 3 by 4, 4 by 5, and 8 by 10 transparencies, as well as entire groups of transparencies on one plate. At its highest resolution, the scanner digitizes at 5000 lines per transparency—regardless of the transparency's size. This is where we obtain all of the information that makes up a color file (at 8 bits per pixel, on each of 3 scans for red, blue, and green; files are then processed into CMYK by the scanner's firmware). That amount of data is required to describe the color values in a transparency in order to print high-quality film for separations.

Once the transparencies are digitized, low-resolution versions of the original scans are available on our network for designers, such as *Macworld's* Leslie Barton, who place the images as Desktop Color Separation (DCS) files in Aldus PageMaker for positioning, scaling, cropping, and other effects. Once the page design has been completed, the PageMaker file is transmitted to DPI, where Sakhuja's staff uses Aldus PrePrint to make color page separations. As Aldus PrePrint processes the separations, it automatically pulls in high-resolution image files stored on a file server at DPI to replace the low-res files denoted by DCS tags on the PageMaker page files. Sakhuja's staff then outputs the final color page separations on the Agfa SelectSet.

Who Does Color Retouching?

Until now, our color retouching work has been performed by only one of

our suppliers, using a Scitex Assembly station at costs of up to \$250 per hour. Many publishers and designers working with color want to avoid these costs.

The color-separation houses that have kept color publishing looking good over the years sense that the days of charging \$250 per hour are nearly over. But not entirely, since those of us rushing to bring prepress technologies in-house often lack the skills and equipment in the near term to compete with the quality that service bureaus produce on high-end Scitex- and Crosfield-based systems.

We cannot compete in part because until recently, our artists and designers have not needed to be concerned with some aspects of their trade, such as the impact that manipulating 32-bit images on-screen has on the quality of film produced through analog devices. But they will probably develop the same facility in adapting to in-house prepress color work that they showed when we replaced traditional design and typography processes with Aldus PageMaker.

Not Ready for Prime Time

The real problems that slow down the process of bringing color prepress work in-house are the woeful inadequacies of today's hardware and software. When you watch a Mac take 30 minutes to open a file, you realize that Macintosh hardware and software are inadequate at present to the task of color prepress. But if we want to use the technology we'll have to suffer through the transition.

Problems first arise because of the size of the files. I'm using a Rodime Cobra 650 and a Storage Dimensions MacinStor 650 drive to open test files. Our image files generally run 7MB to 15MB in size, but full-page images can be as large as 45MB. When I try to open the 90MB two-page spread, Photoshop responds with a dialog box saying that there is insufficient disk space—an impossibility. I discovered that both drives, because of manufacturer formatting, may not allocate physical space large enough to store a single file as large as 90MB unless I reformat the drive. Then I can store (continues)

SORRY, CLARIS. BUT IT'S DEJA VU ALL OVER AGAIN.

THE NEW
CANVAS™ 3.0

THE NEW
MACDRAW® PRO

Another new model year. And Canvas is still miles ahead. Lucky you. With brand new models of both the world's top-ranked drawing programs to choose from. Simultaneously.

And MacDraw® Pro isn't a bad try. In fact, it reminds us of another drawing program we've always had the utmost respect for: Canvas 2.1.

Unfortunately for Claris, our new Canvas 3.0 includes enough major enhancements to leave their latest effort idling somewhere back in the dust. Again.

Let's take a look under the hoods.

Canvas 3.0 gives you more high-end text handling features. Like binding to curves. Slanted margins. Text-wrapping outside — and/or inside — irregular objects, and full kerning & tracking control. Even conversion of PostScript® Type 1 fonts to customizable Bézier outlines.

MacDraw Pro doesn't.

Canvas 3.0 gives you more technical drawing features. Like custom dy-

namic hatching. Custom parallel lines & curves. Custom dashed lines, curves & borders. Automatic dimension lines. Area & perimeter calculations. And a Smart Mouse™ drawing aide.

MacDraw Pro doesn't.

Canvas 3.0 gives you more design/illustration features. Including unparalleled Bézier curve editing power—from multi-point selection & editing to automatic object conversion, combining and blending. Magnetic guidelines. Center line auto tracing of scanned images. And full bitmap editing in 24-bit color.

MacDraw Pro doesn't.

Canvas 3.0 also gives you new built-in translators for important multi-platform

formats like CGM, IGES and DXF™. And Open Architecture technology — allowing new tools, effects and translators to be added with ease at any time.

MacDraw Pro doesn't.

You are what you drive. Like Canvas 2.1 before it, the new Canvas 3.0 was developed in direct response to the wish lists of thousands of drawing professionals. Its heritage of performance is proven. Its price is right. And its ease of use is legendary. Which leaves just one last question. If what you draw is important to you, why settle for Claris's sedate sedan when you can get your hands on a dream machine?

BUY VERSION 2.1 NOW AND SAVE!

Buy Canvas 2.1 between January 1, 1991 and August 31, 1991 and receive a free upgrade to Canvas 3.0!

International Users: Please contact your local authorized distributor for upgrade availability and pricing details.

Radius's Mike Boich (at the wheel) and Storm Technologies' Adriaan Ligtenberg—in a race to supply image-compression technology to professional publishers.

multiple large files on one drive.

The real hardware problem is the Mac: the 68030 chip's inadequate power for image processing (particularly since it does double-duty running the operating system); the inadequate technology for processing large blocks of data within the computer system; the inadequate technology for writing images out of memory and onto the screen. Thirty minutes for Photoshop to apply one filter to an image? This is simply not real-world. And those of us looking at accelerators that use the 68040 microprocessor—the micro-processor that will be the heart of Apple's new high-end Macintosh—do not believe that the 040 chip will solve these problems. Nor will simply adding 24-bit color to the system board of a next-generation computer.

If Apple and the Macintosh are to be players in the desktop publishing market's next evolutionary step, that of color prepress on the desktop, then Apple is going to have to reconsider the kind of computing horsepower that it supplies its customers.

Image Processing

In terms of software, we have been blessed in the Mac universe with Adobe Photoshop. This product is known to most of us as a universal can opener for images because we use it to open files saved in different formats, but it has some other uses. *Macworld* readers, for example, voted Photoshop their favorite for both color paint and image processing. It is in these two capacities that artists and designers are coming to depend upon Photo-

Single and Multi-User versions now available!

"NEVER BEFORE HAS SO MUCH MUSCLE BEEN AVAILABLE AT SUCH A MODEST PRICE."

THE NEW LOW-COST MACS--FROM \$999

Even before the Macintosh Classic® & its new companions came along to wow the reviewers with heroic price/performance ratios, UltraPaint was keeping them plenty busy.

"As advertised, Deneba's UltraPaint...really does set new Macintosh graphics standards", wrote Ernest Mau of CompuServe.

"...many more B&W paint features than SuperPaint, almost all of PixelPaint's color tools, a superset of MacDraw II's object-oriented features, and the gray-scale prowess of Digital Darkroom. All this comes in a single program for less than half the price...", wrote David Pogue in MacWorld.

Perhaps Chris Prior of MacUser UK summed it up best when he wrote that "UltraPaint...could prove to be the ideal software package for those looking for a powerful, all-around draw and paint program."

And it's true. UltraPaint really does offer you the

DITTO.

same sophisticated graphics processing power of several leading programs combined — all in one inexpensive, easy-to-use package.

Open it up on one of Apple's new low-cost machines and we're talking a match made in heaven.

Particularly if you've always pictured heaven as a place where you get big muscles without having to pay the price.

WE'LL PAY YOU \$25 FOR BEING SMART.

Purchase UltraPaint and a Macintosh Classic, LC, or IIx between October 15, 1990 and May 31, 1991, and receive a \$25.00 rebate direct from Deneba. Simply send a copy of your qualifying Mac registration card, your original UltraPaint registration card, and dated proof of purchase for both to our main address. We'll send a check for \$25 US by return mail!

See below for further details.

shop. But the program needs to evolve in two ways if it is to serve the professional prepress market: first, it must manipulate real-world image files more quickly; and second, the range of its already considerable software effects must be expanded to rival those available through Scitex or Crosfield workstations.

Several smaller improvements are needed as well: Photoshop should compress image files directly; you should be able to open files in a given format (like RGB) without having to first open the file in another format; PostScript 2 code implementation is a must. Such changes will be up to Adobe and the developers of the product, John and Tom Knoll.

In the near term we plan to make Photoshop on a Macintosh compete with a Scitex system by throwing hardware at the problem. Sanjay Sakhuja, for example, has 32MB of RAM on the Mac IIci that he uses for color retouching at DPI, and he plans to upgrade to 128MB.

Image Compression Is Crucial

Given the size of the files that I'm writing about, compression is vital. We have to store a year's worth of images for use by our sister *Macworlds*. We'll eventually build up a collection of multigigabyte drives, but they're expensive. And at up to a gigabyte of storage for each issue of the magazine, we'll never be able to afford storing images at full size.

Compression is important for other reasons as well. We want to transmit images across our ISDN network, which is too slow even at 64,000 bits per second and runs out of capacity quickly. Storm Technologies' Adriaan Ligtenberg and Radius's Mike Boich have been sensitive to our initial input on these products, and changes are under way in their compression products.

Looking Ahead

Last year I suggested that 1991 would be the year of color in publishing. I still believe that, but it's going to take until the end of the year before we get all the bugs worked out and are producing all our photography on the Mac. And, of course, just a little more equipment. ■

THINK TWICE BEFORE YOU SWITCH TO ... 7 ...

Think backup. And once you switch, think backup again.

You need Retrospect, a backup program that won an Eddy under System 6 and carries on the tradition into System 7. Retrospect is as familiar with Aliases and the Extensions folder as it is with tape drives and SyQuest cartridges. And to backup networked Macintoshes to one storage device, there's Retrospect Remote.

RETROSPECT & RETROSPECT REMOTE
To Go Forward You Must Backup

NOW THE COMPUTER FOR THE REST OF US

PRESENTING PATHWORKS FOR MACINTOSH. APPLE AND DIGITAL REALLY DID IT THIS TIME. AND NOW, NETWORKING WILL NEVER BE THE SAME. TOGETHER WE'VE CREATED PATHWORKS™ FOR MACINTOSH. NETWORKING MADE SO SIMPLE, THAT IF YOU CAN RUN A MAC, YOU CAN NETWORK ONE TO A SERVER.

HOOK UP WITH THE BIG BOYS. ISN'T IT ABOUT TIME YOU COULD ACCESS CORPORATE AND DEPARTMENTAL DATA—NOT TO MENTION APPLICATIONS—RIGHT FROM YOUR DESK? NOW YOU CAN.

AGIANT LEAP FORWARD IN BACKUP OF COURSE YOUR FILES ARE SAFE WITH US. BECAUSE PATHWORKS AUTOMATICALLY BACKS THEM UP FOR YOU. EVERY STEP OF THE WAY.

NOW LOADING SOFTWARE IS LOADS EASIER. PATHWORKS LETS YOU DISTRIBUTE FONTS AND APPLICATIONS ALL IN ONE SHOT. ALL ACROSS YOUR NETWORK. ALL FROM A CENTRAL LOCATION. SO EVERYONE CAN WORK FROM THE SAME SOFTWARE VERSION.

FIRST CLASS ELECTRONIC MAIL. WHEN IT ABSOLUTELY POSITIVELY HAS TO GET THERE, SHIP IT VIA LANs. BECAUSE NOT ONLY DOES PATHWORKS LET YOU CREATE, EDIT, SEND AND RECEIVE MESSAGES, IT TIES INTO YOUR COMPANY'S E-MAIL SYSTEM.

BRINGS OUT THE BEST IN OTHERS.

THANKS TO PATHWORKS, ALL PCs CAN SHARE AND SHARE ALIKE.

NETWORK PERSONAL

WORKS WITH THE REST OF YOUR COMPUTERS.

SERVES ALL KINDS.
PATHWORKS IS THE IDEAL
PLATFORM FOR CLIENT-
SERVER COMPUTING.
WHICH MEANS IT CAN
ACT AS A DATABASE
SERVER, APPLICATIONS
SERVER, AND HECK,
EVEN A DEVELOPMENT
PLATFORM.

**MAKE FRIENDS IN
FAREWAY LANs.**
FROM ACROSS THE HALL,
TO AROUND THE WORLD,
PATHWORKS CONNECTS
ALL YOUR APPLETALK LANs
TO ONE ANOTHER.

PATHWORKS. From Digital And Apple.

Incredibly enough, PATHWORKS for Macintosh has made the world's friendliest computer friendly with every computer in the world. Thanks in part to Network Application Support (NAS), Digital's unique way of turning every system into an open system.

So if you like the sound of PATHWORKS, call us.
The number's 1-800-343-4040.

RASTEROPS IS REDEFINING THE PLAYING FIELD WITH OUR NEW 24XLTV.

When it comes to 21" color video systems, the new RasterOps® 24XLTV is in a league by itself. Using unsurpassed VLSI and state-of-the-art surface mount technology, we've packed an unprecedented combination of features and functionality into a single slot solution.

Consider the stats. Our 21" color video display system adds 24-bit True Color brilliance to any design. And the on-board accelerator does it fast. The video in a window, as well as Mac® to video output, lets you catch all the best plays. And the optional JPEG

True Color and video comes to the big screen all in one system with the new RasterOps 24XLTV.

compression adaptor lets you do all this in less space than you thought possible.

With these kinds of advancements in the art and science of color, there's no doubt that the new RasterOps 24XLTV is a whole new ball game. But that should come as no surprise. After all, in the field

of color video solutions, RasterOps has consistently been batting 1000 season after season.

To find out more and get a free poster size version of this True Color photo, call us today at 1.800.SAY.COLOR, ext. 220.

End of the Macintosh

Won't it be great when Apple finds its Macintosh monopoly and market share and technological lead disappear at the hands of all those NuTek machines ["Send In the Clones," April 1991]? Won't it be great when Apple loses its peripheral business? Or loses its dealer network at the hands of the mail-order shops? Hey, who cares? Apple can always fall back on its mainframe business like IBM did. What? Apple doesn't have a mainframe business? Too bad.

I guess I have to go with the clone article as my favorite. After all, I made a conscious decision to go Mac rather than IBM, and if I end up with an orphan machine I have no one to blame but myself.

Paul Galanti
Indianapolis, Indiana

The Atari That Would Be Mac

In your discussion of Mac clones and emulators currently in production, I was disappointed that you failed to mention the Spectre GCR cartridge, which transforms an Atari ST computer into a (faster) Mac Plus. The Spectre GCR (minus the 128K Mac Plus ROMs) retails for \$299.95 from Gadgets by Small, Inc., 40 W. Littleton Blvd., #210-211, Littleton, CO 80120.
Forrest Blood
Delran, New Jersey

Develop, Don't Litigate

What a waste! If NuTek spent those zillions on developing the next generation of personal computers instead of meticulously cloning the Mac and preparing to do battle in the courts, the consumer would be light-years ahead. Apple is equally to blame.

Michael W. Miller
Middleton, Wisconsin

AutoMac's Unlauded Advantages

Yes, you can assign the F-keys to your [AutoMac III] macros ["The Desk Potato's Guide to Macros," April 1991], although you can't just press F8 and start recording a macro to empty the Trash or print, as you can with other macros. You can still use them by simply typing "F8" in the Re-

cord dialog box. AutoMac will then ask you to press the F8 key to define its position on the keyboard, then just record away. You can use all 12 F-keys and also the escape key this way.

Where you got the figure 20 for the number of times AutoMac can loop, I don't know. I set up a macro before I leave for the night and it's still running in the morning.

I was also disappointed that you did not mention the editing feature in AutoMac, which has been a real time-saver more than once.
Paul Reznick
Troy, Michigan

Thanks for pointing out the undocumented feature. In our tests, AutoMac's recursive macro loop only about 20 times. In

related news, CE Software has released an Extensions set for QuickKeys². One of them pastes any text or graphic at a key-stroke; another permits controlled looping; and still another switches your monitor between various color settings.

Paper Chase Redux

You guys were way too easy on that apparent environmental nut who complained in a letter to the editor in your April issue that you are using 1485 metric tons of paper per month to include subscription forms in *Macworld*. That figure is incredible because it is grossly wrong. My calculation gives something like 3 tons. Even her calculation of 809.4 times 340,000 was off by more than a factor of 10. Your (continues)

Corrections

The upgrade price [Updates, April 1991] for Falcon from Spectrum HoloByte is \$5.

Ehman lowered the price of the Swift 165 hard drive as "Midrange Hard Drives, Just Right" [March 1991] was going to press. The \$849 price is reflected in the table but not in the text.

The TokaMac LC accelerator (MacBulletin, April 1991) is available from Fusion Data Systems, 512/338-5326.

typist should have caught that. Why are people so gullible about ridiculous environmental claims? Anyone who didn't instantly recognize how preposterous the numbers in that letter were would probably also believe, say, that monitor emissions are harmful.

*Bill Mixon
Austin, Texas*

In fact, we use 10 tons of paper per issue for the subscription cards and the reader service cards combined. Also, the National Academy of Sciences is currently studying electromagnetic emissions.

Biodegradable Reviews

How about printing *Macworld* on quality recycled stock? *Garbage* magazine does it and it

looks great. If you're serious about the environment, drop the posturing and do something constructive!

*Gary Young
Albany, California*

We are exploring with our printer the use of recycled paper and soy-based inks. Currently, there are no acceptable solutions, but we are in constant contact with our printer about the latest technological breakthroughs and how soon we might be able to utilize them. We currently use recycled paper for all our marketing pieces and are testing the use of recycled paper for our inserts and subscription and renewal cards.

Pros of Prodigy

Prodigy has yet to have a fair review in your magazine. Essentially, Prodigy gives you unlimited time

on the service for \$10 a month. Some few percent of its membership were using this fact to send over 1000 pages of mail a month. Prodigy could do it only if other members subsidized the heavy E-mail users.

The question of censorship is two-sided. Because of children, Prodigy needs more supervision of its bulletin boards and public clubs than the other services.

*Calvin S. McLaughlin
Corona del Mar,
California*

Don't Censor Stupidity

I find it amazing that one of the examples cited by Brian Ek of Prodigy [*Letters*, April 1991] is their censoring of the comment, "You can't get pregnant if you don't have an orgasm." So

now they are censoring stupidity as well? As an educator, I find this disturbing. The best way to combat such stupidity is to bring such comments to the fore and let the light of public scrutiny set such people straight. Learning and truth thrive when there is a free and open exchange of ideas.

*Allen Shoemaker
Grand Rapids, Michigan*

Keyboarding with UltraKey

Unfortunately, Larry Stevens's comments [*Window Shopping*, March 1991] are uninformed about the purpose of a keyboarding tutor. Most keyboarding tutors do little more than provide drill and practice. UltraKey shows people how to type correctly. In each (*continues*)

lesson, keys are introduced by demonstrating the key-stroke and letting the user respond.

The review's largest oversight is the failure to mention the skill-check component of UltraKey, which treats users to a unique, new experience. UltraKey is the only key-boarding tutor that tests your skill by letting you freely type just as if you were word processing. It then analyzes your work, looking for strategic problems—the kinds of problems that result from poor posture and incorrect hand position. When you use UltraKey, it's like having a private teacher.

We know that UltraKey costs more, but in our opinion, a \$79 list price is what it takes to provide

customers with a key-boarding tutor that really works. If, after using UltraKey in the recommended manner, any customer is not satisfied that UltraKey is worth every penny paid, then Bytes of Learning will refund that customer's money.

Art Willer
President, Bytes of Learning
Willowdale, Ontario, Canada

Bad Call to Bottom Line

I was looking for a printer for my Mac, and on page 323 of your February issue I saw an ad from Bottom Line Distribution that quoted a price significantly lower than any other I'd seen. The ad also gave a 900 phone number, and said it would cost me \$2 per

minute to call. That made me a bit nervous, but I figured even with a few bucks for the call the price would still be lower than anywhere else. So I made the call, and was told the item was "out of stock."

Now I get my phone bill and find it cost me \$4 to learn this. So how come this company has a 900 phone number? Generally, the point of a 900 number is that what the caller is buying is the content of the call itself—as in the 900 numbers on late-night TV ads featuring sultry girls in filmy negligees. In this case, Bottom Line's quoted prices are pretty sexy, to be sure, but the final product delivered is what used to be called a tease. Big talk, no action.

Macworld made mon-

ey on the ad; I got taken. I'm disappointed in you guys.

Andrew Main
Santa Fe, New Mexico

Bottom Line Responds

We use our 900 number as a tool to help lower our overhead. The majority of our customers realize that the phone charges are small in comparison to the amount of money they save, as well as the service and technical support that Bottom Line provides.

It is an unfortunate reality that items are sometimes out of stock. However, as we do stock over \$160 million worth of inventory, if anyone has it, chances are it is us. If you had requested that we do so, your order could have

easier to use
and more
powerful than
a Macintosh.

High Yield CDs.

Quantum Leap delivers great value in CD software.

Quantum Leap Technologies created the largest collection of Mac software ever produced—the **CD7™ Super-Library** with over 700 megs of select shareware and public domain programs.

Quantum Leap didn't stop there. We published an even larger disc, the **Giga-ROM™**, a hefty 1,200 megabytes of shareware on a single compact disc. How did we do it? We archived and

indexed the whole collection with "On Location™" for fast, easy retrieval. The Giga-ROM™ offers an instant 1.2 gigabyte ready-to-go BBS file section!

We also gave you the world's largest collection of educational, instructional and self-help software, **Macademic™**.

Watch for Quantum Leap to set the standards for price and performance in Macintosh CD Software.

Dangerous Surge Protection

I enjoy reading *Quick Tips* by Mr. Poole, but when I read the answer to the "Surge Suppression" question in your March 1991 issue, I found that for the second month in succession the subject of supplying AC power to computers did not address the potential hazards of conventional spike/surge protectors. MOV devices deteriorate with age and minor surges,

and both MOV and diode protection technology are apt to damage communications equipment while attempting to protect computers by diverting high voltage to ground. The trend to network computers has made this more than just a problem for modems.

Dave Lueders

Bethesda, Maryland

Order today. Call 1 800 661 9410.

Congratulations. You already own it.

System 7 is here. The biggest improvement in Macintosh since Macintosh.

System 7 brings many new and exciting capabilities to Apple® Macintosh® computers. It also makes the computer that's famous for being easy to use even easier.

But what's really exciting is the fact that the Macintosh computer sitting there on your desktop has the power to take advantage of all these advanced capabilities.

System 7 can run on every Macintosh personal computer we've built since 1986.

(All you need is a hard disk drive and at least two megabytes of memory.)

It's like getting a whole new Macintosh without buying a whole new Macintosh.

And while we have been busy reinventing your Macintosh, the best software developers in the world have been busy, too. Creating the next generation of Macintosh software. Bringing new powers to your favorite Macintosh applications. And creating new programs that will enable your Macintosh to do things no other personal computer has ever done before.

System 7 is just the latest example of how Apple moves technology ahead without leaving you behind. To not only protect your invest-

ment, but also to make it worth more than ever.

To make the transition easy, we've prepared two System 7 Upgrade Kits.

The Personal Upgrade Kit is for individual users and contains everything you need. Including System 7 software, a compatibility checker, HyperCard® 2.1 software, a comprehensive manual and 90 days of toll-free upgrade assistance from Apple.

The Group Upgrade Kit is designed for managers of large Macintosh installations. It will let you upgrade your entire network quickly and easily. And it includes System 7 software, the compatibility checker, HyperCard 2.1, a special Macintosh guide to networking and 180 days of toll-free upgrade assistance.

For information on upgrade kits, call your authorized Apple reseller. For the name of the reseller near you, call 800-538-9696, ext. 777.

And rediscover the power no other computer can offer. The power to do more than ever. The power to be your best.®

Introducing System 7 for Macintosh.

Version 3.0
HAS ARRIVED!

It takes power.

One-step power.

Since 1985, Microsoft's **Excel** has been the standard-setting spreadsheet complete with high-performance charting, database, and custom development tools. In fact, it's been the choice of nine out of ten Mac spreadsheet users. And with Version 3.0 it's even easier to use, thanks to the new Toolbar, which lets you

perform charting, formatting, and analytical functions *in a single step*. For example, instead of executing several keystrokes or clicks to sum a row or column of numbers, just click Autosum. Other single clicks let you format worksheets, create charts, apply styles, run macros, and do much more.

Along with the Toolbar, this new version has

a host of other power features that help you analyze, customize, and produce professional-looking charts, reports, and presentations faster than ever. And Excel 3.0 fully supports Apple's System 7.0. It truly has Excel'd itself.

Microsoft ... 30 day MBG

9803 Excel 3.0 \$309.

It takes vision.

Turn your Mac into a power office.

Write letters, memos, and reports. Crunch numbers and create sophisticated graphics. Put on first-class presentations. And share information instantly. Sounds like what you need to run an efficient office, right? Well, you can have it all in **The Microsoft Office**. It includes *Microsoft Word 4.0*, *Microsoft*

Excel 3.0, *Microsoft PowerPoint 2.01*, and *Microsoft Mail 3.0*, four of the most popular business programs for the Mac in one package, for far less than what they'd cost purchased separately.

And, best of all, the programs work as well together as they do by themselves. Especially with innovations like shared user dictionaries,

mail integration, and Excel/Word warm links (which, for example, will automatically update a graph in a Word document when you change the linked Excel spreadsheet). This Office is definitely the fast track to productivity.

NEW VERSION 4.0
Only \$99

On the money.

Total control of finances.

Whether you just want to budget your household expenses and print checks, or you're looking for a portfolio-management and financial tool, **Managing Your Money** is all the software you need. The latest version features easy-to-follow visual navigators that make the learning curve real smooth and there's HELP behind every screen.

And you get CheckFree software (a \$29.95 retail value) built in so you can pay bills electronically.

You can also use Managing Your Money to estimate tax liability during the year, do personal balance sheets, analyze insurance needs, manage stock portfolios and IRAs, and do extensive financial calculations to analyze investments or college/retirement plans. Need to run a small

business? MYM can also handle P&L statements, AP, AR, balance sheets, depreciation, and more. However you want to manage the green stuff, MYM will keep you on the money.

MECA ... 60 day MBG

2796 Managing Your Money 4.0
(with CheckFree) **\$99.**

Keep in touch.

All your contacts at your fingertips.

Had it with dog-eared phone books, rolodexes, and miscellaneous scraps of paper? Manage personal and business contacts with **Intouch**, the DA *MacUser* (4/91) called "the best name-and-address DA for the Mac" (4½ Mice). It lets you store unlimited names, addresses, phone numbers, and up to 14 pages of notes per entry. It can

dial numbers and print envelopes in a variety of styles complete with graphics and bar codes.

And to compare documents quickly...

Advanced Software's **DocuComp** compares any two files and displays all the changes including inserted, deleted, replaced, and moved text. *MacUser* (2/91) says, "For any task that requires

a clear indication of what changes have been made, **DocuComp** can be an invaluable time-saver" (4½ Mice).

When it comes

The original mail order source for Macintosh products. Since 1984.

MONEY BACK GUARANTEE

The majority of products we carry are offered under a 30 or 60 day Money Back Guarantee. The companies participating in this program are highlighted in red. If you are not satisfied with your purchase of any of these products, call us for an authorization and return it with all of the original packaging within the guarantee period for a refund check (or credit on your credit card). We reserve the right to limit quantities on such returns.

LATEST VERSIONS

We only carry the very latest versions of products. For products or versions not yet released at press time we've indicated the expected availability dates as supplied to us by the manufacturers. We'll give you all the latest information when you call.

SYSTEM 7.0

As per the Compatibility Checker Stack (April 22, 1991), products and versions denoted with the symbol  will run under System 7.0. As always, please check with your salesperson at the time of your order.

Also, all software is not copy-protected, unless indicated otherwise by (CP).

“Even a half-life can be an eternity.”

Dear MacConnection,

Months ago we ordered a product from one of your competitors. We commented that it sure would be nice if they didn't send us all those peanuts with our order. They reassured us that their peanuts had been sprayed with a special decomposing agent that would cause them to biodegrade. We placed

their peanuts in a cup with some water, set them in sunlight, and made certain they got lots of air. It's been five months and these peanuts have shown no indication of going away. We told ourselves we would order all our software from you until their decomposition was complete. It seems you have a

customer for life, in a world where even a half-life can be an eternity.

Ben Bauermeister

OUR POLICY

- We accept VISA and MASTERCARD.
- No surcharge added for credit card orders.
- Your card is not charged until we ship.
- If we must ship a partial order, we never charge freight on the shipment(s) that complete the order (in the U.S.).
- No sales tax, except Ohio residents (please add applicable tax).
- All U.S. shipments insured; no additional charge.
- APO/FPO orders shipped First Class Mail.
- International orders U.S. \$250 minimum.
- Upon receipt and approval, personal and company checks clear the same day for immediate shipment of your order.
- Corporate P.O.s accepted subject to credit approval.
- COD max. \$1000. Cash or certified check.
- 120 day limited warranty on all products. Defective software replaced immediately. Defective hardware repaired or replaced at our discretion. All items subject to availability. Prices and promotions subject to change without notice.
- Our order lines are now open 24 hours a day Monday through Friday, and Saturday 9:00 AM to 5:30 PM EST. You can call our business offices at 603/446-7711 Monday through Friday 9:00 AM to 5:30 PM EST.

SHIPPING

Continental US: Barring events beyond our control, all credit card orders phoned in weekdays by 3:15 AM EST will ship Airborne Express for delivery the next business day. Which means same day delivery for orders placed between midnight and 3:15 AM EST. (Some orders may ship by UPS Ground for next day delivery). Saturday delivery available to many areas upon request. Some areas require an additional day delivery. The total freight charge on any order placed with MacConnection is only \$3.

Hawaii, Alaska, Canada, Puerto Rico and U.S. Virgin Islands: Call 800/334-4444 for information on shipping and charges.

All other areas: Call 603/446-7711 or FAX 603/446-7791 for information.

New Low-Cost SuperMacs

No wonder the Macintosh® LC and IIsi are getting the attention of so many design and color publishing professionals. They're tremendous values for the money.

But what happens when you run today's leading color graphics programs on standard 12" and 13" displays? You can only work on a fraction of the image you would see on a large-screen display.

That's where SuperMac comes in. We have cost-effective solutions that turn low-cost Macs...into large-screen SuperMacs. You can see the results on our 19" and 21" displays shown above.

SuperMac's™ low-cost 256-color Spectrum/8™ graphics cards enable the LC and IIsi to run a wide range of displays—more displays, in fact, than *any other* 8-bit graphics cards. So you can mix and match cards and displays to get the best results for your needs.

These new cards have the same features as our cards for high-end Macs. That means your applications deliver one- and two-

page spot-color WYSIWYG on the LC and IIsi. *Plus* impressive results in presentation graphics and grey scale publishing.

Exceptional price/performance. Our new Spectrum/8 cards cost less than *half* of comparable graphics cards. So you can purchase one with a 19" SuperMac display—and create

an *entire* high-resolution system for your LC or IIsi—for less than some vendors charge for their displays alone!

Visit your SuperMac reseller now, and see how affordable large-screen color can be. To find the nearest reseller, call toll-free today: 1-800-624-8999 (ext. 210).

The SuperSource For Color

ART BEAT

by Cathy Abes

The tools and the talent behind Macworld's graphics and the techniques that make them possible

Artist: Peter Alsberg, who lives in Washington, D.C., works as an illustrator for the *Washington Post* and also does free-lance illustration. Since he began exploring the Mac's graphic possibilities three years ago, Alsberg has successfully adapted his brush-and-ink drawing style to work with the Mac and to make better use of FreeHand—his program of choice—with its line- and curve-drawing capabilities.

Tools: Mac IIcx with 5MB of RAM and an internal 100MB hard drive; Microtek MSF-300Z color scanner; Aldus FreeHand 2.02.

How It Was Done: Alsberg's intention was to give this illustration—which opens the *Conspicuous Consumer* column—a loose feel, to make it look less like a computer-generated drawing. This meant creating lines that didn't necessarily connect and colors that often extended beyond an object's boundaries.

He started out with a very dark, soft-pencil line drawing, which he photocopied to make the lines darker and denser. Then he scanned it into FreeHand as a TIFF file. After sending it to FreeHand's background layer (layer 0),

The final illustration, which opens the *Conspicuous Consumer* column on page 141.

he made the background layer inactive so he could use the image as a template; this enabled him to trace over it without worrying about accidentally moving it.

Alsberg specified the top layer (200) for all his line work (by choosing Layer Control under the View menu) so that none of the lines would get hidden behind color fills. Having the lines on the top layer also let him change the line weights without affecting anything else in the drawing.

"I try to organize my drawing so I'm drawing things on top of each other in sequence—either by drawing each new object on a higher layer or by sending existing objects to a lower layer," he says. "Generally, I draw on one layer and then send that part of the illustration to the back."

To specify the type of lines he wanted for the il-

lustration, in the Basic Line dialog box under the Line menu he chose the settings—1.5-point line weight, round cap, and black line—and saved them; the new format then became part of the Line menu. Alsberg prefers to use round-cap lines (the ends of the lines are rounded, not flat) because they fit in better with the style of drawing he does.

After the line settings were in place, Alsberg selected the combination tool (⌘-6) and began drawing. Because this tool combines the capabilities of the curve and the corner tools, it enabled him to draw the lines in his illustration more accurately than he could have by using the corner tool and the curve tool separately. With the combination tool, you create a polygon with corners clicking from point to point; clicking and dragging at the same time creates a curve.

He drew some of the more complex curves by first zooming out to make the drawing smaller and then using the freehand tool. This enabled him to create fewer points along the line and allowed him to draw a complex curve in one fluid motion, more like brush-and-ink drawing.

After finishing the line drawing, Alsberg chose a lower layer (100) in which to create the colors. He specified None in the Line menu and used the combination tool to create a closed shape for each book by tracing its outline; then he filled them with color and sent them to layer 1. After creating the blue background (for the water), he sent it to layer 2, since he wanted the water to partially overlap the books. Back in layer 100, he filled in the rest of the colors, using Send to Back to layer each new color over the last.

To simplify the process of drawing the many crescent-moon shapes that appear in the illustration, Alsberg used both the corner tool and curve tool. He found that placing one curve point between two corner points creates a perfectly smooth arc between the two corner points. To create a crescent, he first selected the corner tool (⌘-9) and clicked to make a point. Next he switched to the

Circle 138 on reader service card.

The original line drawing after the artist traced it from the TIFF file he'd scanned and pasted into FreeHand.

One of the squiggly lines drawn with the freehand tool; the smoothly curved line on the left is made up of fewer points because it was drawn in zoom-out mode. The line on the right, drawn zoomed in, looks lumpy because its many points cause more variations in the curve.

To automatically create a smooth crescent-moon shape (left), the artist alternately used the corner tool and the curve tool. Using the combination tool or the freehand tool would probably have produced irregular curves (right), requiring point-by-point editing to smooth out the lines.

Not satisfied with the position of the canoeist in relation to the rest of the drawing (top), the artist grouped the lines and colors that made up the man, the canoe, and the book underneath him; then with the skew tool he pulled on one of the grouped element's handles to flatten it out and rotate it slightly (bottom).

curve tool (⌘-8) and made another point above or below the first point. To complete the arc, he went back to the corner tool and made a third point; after using the curve tool to draw a point above or below the first arc, he completed the crescent by selecting the corner tool and clicking on the very first point.

Next Alsberg used the straight line tool to draw all the lines that made up the man's shirt. Then, to give the shirt its plaid look, he selected the lines he wanted and chose Basic under the Line menu to change the line color from black to either yellow or orange.

Alsberg was dissatisfied with the position of the man in the canoe in relation to the rest of the drawing; he selected the lines and colors that defined the man, the canoe, and the book underneath, and grouped them all. Then, after choosing the skew tool, he repositioned the grouped elements and distorted their dimensions by pulling on one of the four handles.

But now, more than the shape of the elements was distorted. In Free-Hand 2.0, when you alter grouped elements in any way—such as by reducing or stretching—the weight of their individual lines changes as well. To return the lines to the weight Alsberg had originally specified, he ungrouped the elements, selected Layer Control, and isolated the layer that contained all the lines (layer 200) by making it the only active layer. Then in the Line menu, he clicked on the line settings he had originally created. ■

If this is how you leave your office, you need Carbon Copy™ for the Mac.

Carbon Copy™ for the Mac 2.0 lets you remotely access your Mac.

Working away from your office can be a burden. There's too much to pack and something important is often left behind. Now you can get into your office Mac and work on it as if you had taken it along.

Remote control lets you direct another Mac's screen, keyboard and mouse. And you can send and receive as many files as you wish at the same time. You can even get needed files while you're working on something else!

By setting the level of access for each computer, you'll be protected against unwanted visitors too.

Carbon Copy is the best value. For both remote and network access, ask for Carbon Copy's Single User package. Or ask for the MacModem™, a 9600-baud V.32 modem, two copies of Carbon Copy and the MacModem wake-up cable that turns on your remote Macintosh. For network-only use, you'll want the \$299 *Unlimited Users* per AppleTalk network zone package. Free support is provided

to registered users, and you can contact us 24 hours a day via America Online.™

Free Remote Control Guide. Carbon Copy has been the leading family of remote control products for over 6 years. With over 750,000 copies installed worldwide, we wrote the book on remote control. Call or mail the coupon below today for your free copy.

500 River Ridge Rd., Norwood, MA 02062, 800-822-8224

Free upgrade to version 2.0

Version 1.0 users, if you haven't registered do so now to receive your free upgrade

Carbon Copy works by connecting two Macintosh computers by ordinary telephone lines using modems. Carbon Copy also works on AppleTalk networks. One copy of Carbon Copy is required on each computer. Supports Mac to Mac only.

Carbon Copy and MacModem are trademarks of Microcom Systems, Inc. Other trademarks are property of their respective owners. © Microcom, Inc. 1991. All rights reserved.

How to Master 20 Popular Macintosh Programs Without Reading The Manuals

Macintosh Programs Can Be Learned in a Few Hours With the Right Training

Over the past four years I've been associated with over 50,000 people attempting to learn the Macintosh computer. I've watched as each person wages their own personal, private battle to master the computer and the most popular Macintosh programs.

I've seen their frustration, have empathized with their confusion, and understood their computer fears. I've talked to workers who have had new computers and new programs simply dropped on their desk with the directive to, "learn this." I've listened to people who have struggled night after night trying to read and understand a computer manual. Can you imagine trying to understand and master 4th Dimension from the manual?

You would be surprised at the number of people who have confided with me the fact that they've literally given up ever learning some of the programs. They simply put the box on the shelf and wrote the expenditure off as a bad investment.

Hard Earned Money Wasted

Can you imagine how much money has been wasted on programs and computers that are sitting abandoned? Right now think of the people working on Macs in your office. Do they really understand the machine? Do they know what to do when it goes down? How many programs are each of your people using? Have they really mastered the programs they're using? Do they know the short-cuts and valuable techniques that will save you time, money, and increase your professionalism?

An Excellent, Low Cost Training Solution

Four years ago I founded MacAcademy. My purpose was to create a training organization that provided training similar in nature to the Macintosh itself - simple, easy to use, and effective.

Now, four years later the MacAcademy teaching method has proven to be extremely successful. Right now people are benefiting from MacAcademy training in over 100 cities in the U.S., in Canada, Great Britain, Australia, Japan, Hong Kong, and 22 additional countries throughout the world.

MacAcademy training is successful for one reason - it works!

The Video Answer

Two years ago we introduced the MacAcademy Video Training Library. This library now includes over 52 different titles. Each video is 2 hours long and offers clear, concise, effective training for the Macintosh and over 20 popular programs. In many cases you can purchase up to 6 hours of training for one program.

MacAcademy has resisted the temptation to follow competitive training programs who have recently implemented large price increases. Our videos started out at \$49 each and are still only \$49. The best training in the business for less than \$50. This low cost training alternative has proven to be the Macintosh training choice of over 10,000 companies.

Guaranteed Results

The MacAcademy reputation is excellent. Our guarantee is simple: If you're not happy we'll give your money back. No hassles or problems.

To Order

On the next page you will find a current list of all MacAcademy Video training tapes now available. To order, simply fill out the enclosed order blank and send with a check, credit card information, or purchase order to MacAcademy Videos Dept. MW591 477 S. Nova Rd. Ormond Beach, FL 32174 or call the numbers listed below.

Since we've spent thousands of dollars on computers and software doesn't it make sense to invest \$49 in training?

Now is the time to start that training. Thank you for allowing MacAcademy to help you in that effort.

Randall D. Smith - President

Here's What A Few Of Our Customers Say About MacAcademy Video Training:

"...we doubted that video tapes would be acceptable to us. We were pleasantly surprised and favorably impressed with the quality of your tapes. Accordingly, I have enclosed an order for your latest releases."

Harland Anderson
Computer Consultant

"... just one of the short-cuts you showed me in Word saved me 20 minutes of set-up time, not to mention frustration on a new document this morning. Thanks!"

Chessie Robins

"We wish to express our appreciation for your video series. It is demonstrational and an extremely helpful learning tool which has enabled us to grasp more easily the concepts of the Macintosh computer."

Marty Torres

"Having used your wonderful tapes for the third time I feel that we are old friends. As a result my Mac SE-30 is running 'lean and mean'. Thanks again."

J.J. Johnson

"Please accept my compliments on your training series. You explained everything so clearly and I'm amazed at how much I learned."

With Mirror Monochrome Monitors You Get More Screen for Less Green.

Apple 15" Mono/Card
\$1748

Mirror 19" Mono/Card
\$877

Mirror's big screen monochrome displays are proof that you don't always get what you pay for. Sometimes you get more! Take our 19" Two Page Display System. It's about half the price of Apple's 15" Portrait Display yet has almost twice the viewing area. And Mirror's monitor has a faster refresh rate, and comes with an anti-glare screen and tilt swivel base.

If you're on an even tighter budget and still want big screen convenience, you should consider Mirror's popular 15" Display System. At just \$477, it's the lowest priced full-page monitor on the market. It offers all the features of its big brother and both are compatible with all Macintosh CPU's including the SE, Plus and Classic.

Best of all both are backed by Mirror with a full one year warranty, unlimited free technical support, and a 30 day money back guarantee. So before you part with any green, consider buying one of Mirror's big black and whites, otherwise you might end up seeing red and feeling blue. Call us at **1-800-654-5294**

MIRROR

Mirror's popular 15" Monochrome portrait display is just \$477 and is compatible with the SE, Plus and Classic.

The Rime of the Ancient Marketer

A CAUTIONARY TALE FOR LITTLE GUYS IN THE MAC MARKETPLACE

M

BY STEVEN LEVY

Macworld Expo is a time when the entire Macintosh community plays peacock. The booths are big and lush, the aisles packed with customers, and the parties tastelessly lavish. Wine flows and people stuff their mouths with shrimp.

Everything seems dipped in an oily sheen of success. But when you make an effort to really talk to people, especially some of the smaller vendors who once constituted the heart of the Mac universe, you sometimes glimpse a dark side behind the glitz.

For the past few years, I've made a point of chatting with Dave Johnson, the president of Working Software, to soak up the latest news from his quarter of the industry. The news has not been great. We've talked in snack bars at Boston's Bayside Exposition Center and on park benches outside San Francisco's Civic Auditorium, but not at Dave Johnson's booth: Working Software can't afford a booth of its own. Which is not to say that his products and his support of them are not excellent—they are. But virtue often goes unrewarded, and the Macintosh market has been no exception to this cruel reality. Listening to Johnson's tale, a reverse morality tale that goes back to the early days of the Mac, I feel I'm hearing a long and emotional saga... sort of a Rime of the Ancient Marketer. I think it bears repeating.

Dave Johnson, a slim, affable fellow, now 37 years old, came to Silicon

Like a roller coaster, the software business has ups and downs. Dave Johnson has seen both.

Valley from Detroit in the early 1980s. It was the big computer boom and Johnson, a software engineer, was part of a contemporary gold-rush-style migration. He settled in idyllic Santa Cruz, California, and went to work for Atari, the ultimate high-growth company, just in time to see dunder-headed suits take the place down in flames. (The company was later revived.) Then he worked for another

high-flying game company, where he witnessed another business disaster. Johnson and his car-pool buddy, Mike Greene, watched this senseless decline and brainstormed about how things might be better arranged. Why not a company that eschewed the big rip-off and instead did things with the customer first in mind? A company built on service, not on slick packaging; a company that offered sensible products, reasonably priced. Why not?

Hard Working

In 1985, Johnson and Greene decided to start that company. They called it Working Software, dedicated it to providing quality software for the Macintosh, and began creating the first product, a spelling checker called Spellswell. It shipped in January 1986 and did "very well for a company in a garage," says Johnson. With the revenue and recognition that came from Spellswell and other products, including a file-locating program called Findswell, Working Software quickly became one of the Mac's most valued small developers—part of a community that by passion and prod- (continues)

uct helped keep the Mac afloat in its time of travail.

In late 1986, Dave Johnson bought out his partner. Now fully in charge, Johnson was forced to think long-range. With the success of the Mac Plus the market was changing, and he felt a real temptation to take the plunge into rapid growth. "I was jealous of the companies with glossy

ads—'real' companies," Johnson explains. "I thought that we needed the full-page ads, retail distribution, better packaging."

It really wasn't much of a choice. Like some sharks, or like Woody Allen's relationship with Diane Keaton in *Annie Hall*, the more modest Macintosh developers had to move forward or die. Otherwise, the bigger

competitors, with their marketing clout and their ability to get exposure in stores and mail-order outlets, would eclipse the little guys. It was already happening—Working Software, which at best had only been breaking even, was beginning to see its sales slip.

So Johnson hired more people and moved to bigger offices. He changed his product packaging so it would fit on store shelves and catch the browser's eye. He expanded the product line, introducing sets of custom dictionaries for Spellswell. He invested heavily in developing a new flagship product, a program that would provide everything a user would need to churn out business letters, to be called QuickLetter.

The latter decision had its hellish consequences. QuickLetter cost a lot to develop, and, as often happens, it was late. Originally planned for early 1987, it didn't ship until December 1988. People who bought it loved it. But not enough people bought it. The company was in trouble.

I remember Dave Johnson at the Boston Expo in the summer of 1989. Not only could he ill afford to properly display his products, but he couldn't easily manage hotel accommodations—he was sleeping on the floor of someone's house, 40 minutes from Boston. Due to a complicated distribution arrangement with another company, his products had been overshipped and literally no product revenue was coming into Working Software—none. He had sold his house to keep the company going. From a high-water mark of nine full-time employees he was now down to three. Not surprisingly, he sounded depressed, not only about his company, but also about the fate of others like it.

"I don't know if *any* small companies will be around soon," he told me. "Nine companies sell over 90 percent of the software, and over a hundred are fighting for the rest. Apple used to help companies like us, but now Apple has no idea who we are. We used to get dramatic help from them—they'd buy our products, literally help us keep going. Not any more." In retrospect, it seemed that (continues)

MS-DOS® and Windows®, 2 PC/AT® Slots, VGA®, PC/Novell® EtherNet for Your Macintosh® **Orange 386** MS-DOS® Coprocessor

If you need to run "corporate standard" or custom PC software on your Mac, or require superior connectivity to PC dominated networks, you want maximum performance and full AT hardware compatibility. Truly a universal platform, the Orange386 coprocessor board features:

Intel® 80386sx/16 processor
for full MS-DOS or Windows compatibility

Revolutionary PC/AT bus slots
for 2 add-in cards such as
Novell EtherNet, VGA,
or Token Ring

Optional 387 math coprocessor

Interface for IBM® PC
compatible serial, parallel,

No OPTICAL ILLUSION

REO-650 with Opticase Disk Holder

There is no optical illusion when choosing the best rewritable optical storage system. Pinnacle's REO-650 is the #1 selling 5.25" optical drive. By offering fast speed, superior support and service, and an unbeatable price - the optical choice is clear.

SCSI SPEED EVALUATOR TESTS, MACWORLD 1991

	Read	Write	R/W Total
Pinnacle Micro REO-650	3031	1924	4955
FWB HammerDisk 600S	3063	1858	4921
SuperMac LaserFrame	2454	1781	4235
Storage Dimensions EO 1000	3000	1061	4061
MicroNet SB-SMO-1	2426	1127	3553
PLI Infinity Optical	1684	1866	3550

Optical drives are now 100% faster than in previous tests performed by MacWorld in 1990, making optical technology a viable replacement for hard disk drives. Since optical drives are more reliable and support removable media, the applications and capacities are virtually endless.

Circle 266 on reader service card

to be successful, a company needed big capital to buy those full-page ads, to purchase space in mail-order catalogs, to keep the company going through the long development cycle of new products.

What seemed to shake Johnson the most was the seeming repudiation of his most basic belief that if you treated your customers well, they

would patronize you in return. "We learned the hard way that customer service doesn't work. People don't appreciate service until after they've already purchased the product. Spellswell is now in its 25th version [the total is now 29], and all but 3 of those upgrades were free—the others cost \$10 or \$15." Even the idea of low pricing didn't seem to appeal to

customers. "When we raised the price of Spellswell from \$49 to \$59, sales went up," he said. "When we raised it to \$75, sales went up again!"

But despite the evidence, Johnson vowed that he would never swerve on his policy of customer service. That way, if the company finally went bust, he would at least be able to say that he did it without cheating anybody. Especially himself.

1. Integrated 2D/3D CAD

MiniCad+ is the original award winning 2D/3D professional CAD package. It continues to set the standard for price and performance on the desktops of engineers and architects.

2. Database CAD

MiniCad+ has an integrated worksheet—literally, a spreadsheet and database in one—hot-linked to your drawings. Attach records such as type, cost or size and display at will. Compute area calculations, compile parts schedules and develop cost estimates.

3. Intelligent CAD

Our "Smart Cursor" automatically highlights, identifies and aligns relevant snaps, intersections, tangents and parallels. Snap to the precise point with more ease than you've experienced with any other program. We built the brains into MiniCad+ so you can think about more important things.

4. Programmable CAD

Don't be confined by your CAD program. Extend the capability of MiniCad+ by developing your own palettes with our macro language. We've included a wide variety of special-topic palettes with MiniCad+; others are available from third-party vendors.

Space Plan					
	B	C	D	E	F
2 Room	Area	Cost	Total		
3.1 E101	960.12	\$96	\$92184		
3.2 E109	512.56	\$51	\$26272		
3.3 E115	245.64	\$25	\$6034		
3.4 E111	469.26	\$47	\$22020		
3.5 E103	917.28	\$92	\$84141		

Draw On Our Experience

Packed with features, the only thing small about MiniCad+ is the price. As a professional, you owe it to your desktop to ask your favorite distributor for the 1990 MacUser Editor's Choice winner in CAD, or call us for more information.

Reversal of Fortune

My guess then was that Working Software was soon to be a goner. But at the San Francisco Expo in April 1990, when I next spoke to Johnson, he seemed slightly more upbeat. He actually could afford a hotel room, albeit one that required a trip down the hall to use the toilet. A troublesome lawsuit with the programmer who wrote QuickLetter had been resolved, and his distribution seemed somewhat straightened out—Working Software was actually selling products. The company had also gotten some revenues from producing programs on commission for other companies (such as Correct Grammar for Lifetree Software, a neighbor at the time), and QuickLetter 2.0—impressively upgraded—was on the way.

But not everything was rosy. Apple had just instituted a policy that required developers to pay \$750 for the privilege of being authorized to write the software that would support the Mac. Since Working Software couldn't spare the cash, Apple declared it no longer an authorized Mac developer. Dave Johnson wrote to an Apple executive, pleading to let his company slide on the developer fee, and got his wish. But the incident was revealing.

"The Mac is great," said Johnson then, "but the people who own the Mac, the possessors of the patents, aren't so great." Noting the huge settlements that Apple executives were receiving upon being laid off in corporate reshuffling, he asked, "Do you think a guy who makes over a million dollars if he gets fired cares about the marketplace?" The future still looked cloudy for Working Software. "We might merge with somebody," he said. "We have to. We can't get venture capital since we aren't (continues)

Pocket Power

The world's first 3.5 inch, Erasable Optical Drive.

Pinnacle Micro, the leader in 5.25 inch optical storage systems, now brings you the first 3.5 inch erasable optical drive.

The new REO-130™ with its small size and quick 30 msec. speed is what the world's been waiting for in optical storage.

Each 3.5 inch disk holds 128 megabytes of valuable data, safe and secure.

You can hold the disk in the palm of your hand. You can put it in your pocket, or drop it in the mail.

If you need to distribute or archive large amounts of data, the REO-130™ is the perfect choice.

The drive system is available in both internal or external versions. Interface kits available for MAC, SUN, DEC, IBM and compatibles.

Pocket sized. Amazingly fast. Large capacity, is optical storage now.

Another first from Pinnacle Micro, the Optical Storage leader.

oriented to quarterly earnings. Maybe now that we're making some money..."

I sensed that things were worse than he was letting on, and later I found out that at that time, Working Software was indeed hanging by a thread. Dave Johnson now admits that if Apple hadn't waived the \$750 developer's fee, the company would have gone bankrupt. As it was, in the fall of 1991, the company staked everything on one last chance.

The idea was to shift to direct-mail marketing. Johnson put discount coupons for Working Software products into upgrade packages. Then he swapped mailing lists with another company so he could send out marketing material. "We were literally scraping together the money to get out 200 pieces of direct mail," he said of the company's utter low point. "No one had been paid."

Just when the referee's count was approaching ten, something happened. Orders began coming in.

Enough to keep the company going, enough to print more pieces of direct mail, which helped sell even more copies. As a result, Johnson says, "We had a tremendous last quarter. It was phenomenal how many people ordered our product." After that flurry, orders went up to the point where monthly sales were far exceeding the entire annual revenues of the previous year.

Johnson says that Working Software, now in its fifth year of shipping products, seems rejuvenated. His staff is back to 12, and rising. The company is paying its bills. A new product is ready to ship—called Last Resort, it saves keystrokes in word processing programs, keeping text alive even when the computer crashes. Other new products will come after System 7.0 ships. Things are going so well that Johnson is even planning a vacation. A full week away from work—his first since starting Working Software.

Still, Dave Johnson has no illusions. He knows that small companies

are still at a nearly fatal disadvantage in the Mac marketplace. "The software business has changed completely," Johnson now says. "Mike Greene and I wanted to start a company with the kind of things engineers talk about. Free upgrades, good service, and quality products that don't cost too much. But it's a world of hard-core business types, and I'm learning that."

As for Working Software, despite the rejuvenation, "We're aware that the prospects of surviving on our own are not good," Johnson says. But he wouldn't welcome just any merger partner. "If you're not in the business primarily for money, it's hard to think of [losing your company]—but if we found the right partner..."

His sentence trails off, and I understand that to Dave Johnson, Working Software is not merely an enterprise. It's his life. ■

Macworld columnist Steven Levy is writing a book on artificial life.

"1989 Best Word Processor" MacUser U.K.

You might not think of using a word processor to reformat mainframe files but isn't it nice that Nisus® 3.0 can

Now, with the power of Nisus 3.0's built-in word processing language you can convert mainframe files, index every word in a 400 page book, or even compute a trigonometric function

Most people believe that converting mainframe data into a format that you can use with a Macintosh is no trivial task. Companies spend thousands of dollars on the problem only to run into dead ends. Imagine their surprise when these companies learn that in less than half an hour, Nisus 3.0 can do for them what hundreds of thousands of dollars spent on equipment can not.

The power of Nisus not only

lets you convert mainframe data, it lets you index every word in a document, and remove unwanted and nonessential words like "the, and, not, and of."

But the built-in word processing language isn't the only surprise in Nisus 3.0. It also has an integrated graphics capability that will let you do things that some layout programs can't such as rotate text, graphics, or even add arrows.

```
0025000G5001 50630D PANSOPHIC PANVALET 001 50860C WEST WESTI
001 51000K IBM DL/1 001
A & M RECORDS LOS ANGELES CA90028 2134480037C365200275
000001000104
0025000G3006101298130IBM 4341-UNK 8601M ODOOS-VSE 21298069IBM
3350 01610298058IBM 3420 00813298100IBM 4245 002
A & M RECORDS LOS ANGELES CA90028 2134480037C365200275
```

The sample above shows fixed length fields and fixed length records that are common in some mainframe files. That means you can not simply tell your conversion program to drop in tab or comma delimited spaces at the end of the text in each field. For most programs converting this would be complete chaos. And that's without eliminating the duplications and extracting just the information you want.

Nisus 3.0's word processing language makes short work out of the formatting, extracting, and elimination process. Note the results below, including the bold face and upper and lower case changes. We are not suggesting you buy Nisus only for its ability to convert mainframe files, but with this kind of power, imagine what else you can do.

When it comes to selecting the right scanner, be forewarned. There is a difference you can see in black and white. And color. Just look at this comparison between the La Cie Silverscanner and the Microtek 300ZS. Both images were scanned at default settings with no corrections. This entire ad was then created and separated using Adobe Photoshop, Quark XPress 3.0 and a Linotronic 330.

As you can see, Silverscanner produced a better-looking image than the Microtek scan. Silverscanner lets you scan color, gray-scale, halftone and line art with dazzling clarity. La Cie gives you more with OCR compatibility, faster color previews, versatile scanning controls and up to 1200 dpi.

FREE Software. Silverscanner comes with two FREE bonuses: Adobe Photoshop (full version) and La Cie's exclusive Silverscan plug-in modules for Photoshop, ColorStudio, Digital Darkroom, ImageStudio and Ragtime.

A Company You Can Count On. La Cie is a Plus Development Company, backed by \$400 million in assets. That means you can trust La Cie to provide a constant source of high-quality Macintosh peripherals. Plus dependable service and support.

Silverscanner is the color scanner you've been looking for. See for yourself. Order yours today.

La Cie Silverscanner: 16 million colors;
256 smooth shades of gray, production quality line art;
up to 1200 dpi—all in a single pass.

TouchBASE

TouchBASE and DiskDouble Bundle

\$99

Two of the best new utilities available and now on sale together from the MacZone. TouchBASE is a database to keep track of personal and business contacts. It's handy all the time because it is a desk accessory. TouchBASE can print envelopes, labels, address books, fax cover sheets, and reports. DiskDouble compresses your files whenever you save them and expands them whenever you open them. In effect, it doubles your hard disk (and floppy disk) storage capacity.

Microsoft Excel 3.0

\$299

Microsoft Excel is the most advanced spreadsheet for the Mac. It combines a spreadsheet with business graphics and a database. It provides a worksheet area of 16,384 rows by 256 columns. Presentation tools, such as multiple fonts, variable row heights, shading, custom number formats, 68 built-in chart types and more, make Microsoft Excel the ultimate business tool. Excel has support from hundreds of other manufacturers' products and templates. Transfer Excel charts and worksheets into Word. Easy to update.

Andrew Tobias' Managing Your Money 4.0

Managing Your Money is the most innovative personal finance package available for the Mac. The user interface is pure Macintosh, with a host of icon buttons to make moving from place to place in the program easy. It also has lots of on-line help and comes with a comprehensive manual. Managing Your Money has six main parts: REMIND is a smart calendar. Enter the important dates in your life and you'll never forget them again; MONEY is the heart of the program. Here you'll record income and write checks. TAX keeps records and works with information that determines your final tax bill. PLAN helps you make rational plans for the future and figure out what various options will cost. It also estimates your life expectancy. INVEST helps you manage your investment portfolio. NET WORTH pulls information from the other modules to calculate what you're really worth.

In-House Accountant

In-House Accountant is the first accounting program for the Macintosh that's powerful enough for any small business, but easy enough for just balancing the checkbook at home. In-House Accountant was developed from scratch to take full advantage of Macintosh's power. Familiar point-and-click operations let you see at a glance all of your financial information, anytime you want. Entries made in the transaction list immediately update all related items in other lists, so there's never a need for "posting." The program handles payables and receivables, by letting you move among various accounts without ever having to change modules, or even close a window. Prints professional-looking reports, with different type styles and sizes as well as bar graphs and pie charts.

DeskPaint 3.03/Desk Draw

DeskPaint is a 98K DA that works as well with black & white images on a Macintosh plus or classic as it does with color images on all IIsi or IIfx (even in 24-bit color). It reads and writes PICT, TIFF, and MacPaint files. It does smoothing, auto-trace, graduated fills, multiple windows, and a lot more. DeskDraw is a DA comparable to MacDraw. Some of its features include hairlines, rotated text and arrows. It reads and writes PICT files compatible with SuperPaint, MacDraw II and Canvas.

QuadraLink

QuadraLink is Applied Engineering's answer to clogged serial ports. With the proliferation of popular serial devices, printers, scanners, digitizers, plotters, modems, graphics tablets and the like, comes the need to control several serial ports simultaneously. QuadraLink is fully compatible with the Mac's Communication Toolbox and System 7.0 (when released). For software, the QuadraLink package includes software to create a "Shadow Driver" so its serial ports will be recognized by the software. Like the Mac II's existing serial ports, QuadraLink's four serial ports are standard Mini-8 DIN connectors. QuadraLink carries a full five-year warranty.

MODEMS & FAX

1•800•248•0800

Microphone II

Microphone II has earned praise for its ease of use. Its scripting language makes using electronic mail services an automatic operation. Other types of file transfers are equally effortless. Microphone II now supports the hot new ZMODEM transfer protocol (in addition to XMODEM, YMODEM, KERMIT, and MacTerminal 1.1) and can operate modems at any speed from 50 to 57,600 baud. Microphone II sports improvements in the script language and offers more ways to execute scripts. For work with systems in foreign countries, Microphone II supports character substitution in seven languages under ISO-7 standards, plus user-defined character sets. It also supports large screen monitors and color, including color icons and offers VT102 and BT52 emulation.

*How to speed up program development
and have fun doing it:*

Prograph 2.0 with Compiler

1. Free programmers from the tedium of typing code so they can concentrate on the creative aspects of application development.
2. Get rid of the frustrating edit-compile-run-debug cycle by letting them design and edit programs while they're running—testing new ideas on the spot.
3. Liberate programmers from laboriously coding menus and windows by letting them click and draw their interface instead.
4. Eliminate the need for repetitious recoding by giving them object-oriented programming (OOP).
5. Turn abstract control structures into concrete diagrams so they can see where the data comes from and where it's going.

Put all these advantages into one single Visual Programming Environment and you get speedy application development and a bunch of creative programmers who are having a good time. What you get is Prograph!

"I can often get much further much faster with Prograph than with any of the other developer systems I've tried, including the Macintosh developers Holy Grail."—the Macintosh Programmers Workshop, Don Crabb, *MacWEEK*
"The Prograph environment is the single most enjoyable (yes, enjoyable!) development environment I have ever used. Period". Jeff Sullivan, *Computer Shopper*

#0435 Enhanced Keyboard\$129

RasterOps 24STV

New generation 24-bit True Color display board with real-time video in a window. The 24STV drives a 13" monitor in 1, 2, 4, 8, or 24-bit color modes at 640 X 480 resolution featuring a 2X and 4X Pan / Zoom and Extended Desktop. A 1-bit mask plane allows windows or buttons to overlay live video windows. MediaGrabber application program included to provide extensive control over the display and capture of a single video frame or a sequence of frames for use as an animation file.

RasterOps List: \$1,795
#0005 24STV\$1,299

T-16 Color Display

Spread out with almost twice the display area of the standard 13" color monitor. View your work exactly as it will be printed at actual size - 72 dpi. Save almost half the cost of a 19" color monitor. Get the sharpest, clearest color display at any price. The T-16 has excellent colors, linearity and sharpness, and it sells for a lot less than its larger cousins. The T-16 is an excellent choice for CAD/CAM or color graphics.

E-Machine List: \$2,995
#3919 T-16 8-bit Color System\$2,095

Cutting Edge 15" Full Page Monitor

Eliminate all the scrolling, scrunching and squinting of a small screen. The monitor can display an entire 8-1/2"x11" on screen with flicker-free refresh rate of 75 Hertz and a high resolution of 640x870 pixels.

Cutting Edge List: \$899
#3303 FPD SE/30\$579

Rival 19" Black & White Monitor

The officially acclaimed Mega Graphics Rival is now available for all Macintosh models. It gives you the most crisp, most clear and brightest image in the business, truly WYSIWYG. Because the 19" screen displays two facing pages, it is ideal for desktop publishing, layout and word processing. The wide expanse of workspace is an enormous benefit when using CAD and spreadsheet applications.

The fastest way to convert numbers into business charts right in PageMaker, Work, MacWrite II or MacDraw II documents—without switching to a separate program. Press one key, Cheshire offers bar, column, line or surface chart types. Pick a chart, Cheshire instantly plots your numbers and pastes the charts into your document. It can also plot what you type into its window. Includes 21 B&W chart types, or add more any time. MacUser 1990 Editor's Choice Award Honorable Mention—Best Utility.

Abbott Systems

List \$125

#3927 Cheshire 1.0 \$61

PowerICONS

PowerICONS lets you create icons to launch an application or attach a document. It uses a copy of the application icon so you are working with a familiar image. Move launchable icons anywhere or have multiple icons for one application without adding confusion to the system. Unlike DAs and INITs, PowerICONS uses no system memory to operate!

Magic Software List: \$100
#3329 PowerICONS \$38

BackMatic

BackMatic automatically backs up your files each time you shut down your Mac. Install this handy INIT in your system folder and you'll never need to remember to make a backup again. Configure it to back up only files changed or all your most important files.

Magic Software List: \$100
#3328 BackMatic \$49

AutoSave II

AutoSave II saves files automatically with the applications and time interval specified. *Macworld* (7/90) said, "It's so useful, it should have been built into the Macintosh system software."

Magic Software List: \$50
#1244 AutoSave II \$26

DiskDoubler 3.0

DiskDoubler compresses your files whenever you save them and expands them whenever you open them. In effect, it doubles your hard disk (and floppy disk) storage capacity. It works transparently within any application and operates in the background under MultiFinder. Disk Doubler works with documents and applications, plus sound, graphics and scanner files.

Sallent Software List: \$70
#3515 DiskDoubler \$44

Inside Information

If it's out there, it's in here! This new DA is a comprehensive reference tool organizing the English language into logical categories of defined words. More than a dictionary or thesaurus, it lets you quickly and easily explore any of seven general Classes: Nature, Science & Technology, Domestic Life, Institutions, Art & Entertainment, language, and The Human Condition.

Microlytics List: \$120
#0437 Inside Information \$67

Gofer 2.0

Gofer 2.0 adds many useful new features to this popular file finding utility. It now works with Word 4.0, MacWrite II, FullWrite and MS Works. It has a Move to Desktop command, wild card search and the ability to save and retrieve such criteria in their own files. An enhance export feature lets you select a specified number of lines above and below the "hit line".

Microlytics List: \$60
#1940 Gofer \$44

Word Finder V2.0

Installed as a DA, Word Finder gives access to a 220,000-synonym thesaurus. Synonyms for a highlighted word are instantly displayed to be used. It also helps confirm both word meaning and spelling. A smaller database is provided for users with limited disk space.

Microlytics, Inc. List: \$60
#1501 Word Finder \$33

The Random House Encyclopedia

A new DA based on best seller Random House Encyclopedia. Quickly and easily access information by exploring general categories: Geography, History, Philosophy/Religion/Mythology, Social Science, the Arts, Science, Sport & Leisure, Law and Government. A unique resource for learning, a pleasure to use.

Microlytics List: \$120
#0438 Encyclopedia \$67

The Elements of Style

Now The Elements of Style is available for your Macintosh: the ideal tool to make your writing crisp, succinct and powerfully effective. Seven rules of usage, eleven principles of composition, matters of form, a list of often misused words and a style guide will guide any user toward a writing style that, according to Strunk, "makes every word tell".

Microlytics List: \$60
#0416 Elements of Style \$33

MasterFinder

MasterFinder is the complete disk management utility. MasterFinder allows for the complete control and manipulation of files and folders on any hard drive or floppy disk. It's a total replacement for the Mac Finder. Using a concept of window panes as its basic user interface, each pane displays file names from a directory of a mounted drive. MasterFinder's start-up view, the Pane View, consists of four panes that can display information on all mounted drives. Tactic Software

#0148 Master Finder \$49

SAM 3.0

The Symantec Anti-Virus for Macintosh detects viruses by monitoring the suspicious activities that characterize them. The INIT portion acts like a watchdog during startup to detect viral activity. The CDEV portion operates during normal Mac usage and offers a number of options for checking disks and folders as you work. SAM has an Audit Trail to keep track of its activity and your responses.

Symantec List \$100
#0116 SAM 3.0 \$66

Norton Utilities

Norton Utilities for the Mac gives you an unbeatable combination of disk and data recovery software, along with disk optimization utilities. Now you can keep your valuable disks and data safe, secure and operating smoothly. It provides three levels of unerase, designed to give you optimal recovery options. The advanced diagnostic routines dig deep into the Mac operating system tool box to search for and recover lost data in minutes. With the Norton Utilities you can even unformat an accidentally-formatted hard disk. You also get Speed Disk, a powerful disk defragmenter and optimizer to significantly increase system performance by reducing data access time.

Kensington PassProof

PassProof offers total defense against unauthorized use of your Mac without inhibiting authorized use. It's safe and easy to use and unlike potentially dangerous encryption programs, your data is never altered or manipulated at any time. PassProof works with a simple and logical series of "Locks". Some are hardware, some are software - you decide which ones to use and when.

Kensington List \$100
#3660 PassProof SE Type Cases \$70
#3676 PassProof Cx, Ci, Left Drive ... \$70

Maccessories Tilt/Swivel

Raises your Mac 2". Allows you to swivel up to 100° (50° each way from center) and tilt up to 16°. Made of sturdy plastic and high density polyethylene for smooth movement.

Kensington List \$50
#2976 Tilt/Swivel \$21

Maccessories SE Anti-Glare Filter

Put an end to eye strain, blurred vision, and headaches with our Maccessories Anti-Glare Filter. Made with a unique anti-glare, reflective coating, these filters reduce glare reflected from your Mac's screen up to 96%. And they improve screen contrast and clarity up to 20% to eliminate the "fuzzy halo" that often appears around text and graphics. So even the tiniest numbers on a spreadsheet will be easier to read. Made of optical quality glass with ceramic anti-reflection, scratch-resistant coating. Filters VLF/ELF radiation and dissipates statics. Grounding wire draws emissions to earth grounding point. Slips onto front of monitor. No adhesives required.

Kensington List \$100
#3292 SE Anti-Glare Filter \$51

Kensington PowerTree

PowerTree protects your Mac against electrical power problems. Each provides a lighted master switch and size outlets protected against surges, dips, EMI and RFI line noise, plus an LED to indicate if the system is secure. If the circuitry fails, a buzzer sounds and the LED goes dark.

Kensington List: \$50, \$30, and \$100
#3339 PowerTree 10 \$19
#3342 PowerTree 20 \$27
#3343 PowerTree 50 \$54

Kensington Turbo Mouse

If you use a mouse, chances are you've come to swear by it. But here's a reason to give it up: Turbo Mouse. Winner of the 1987, '88, and '89 Macworld World Class Awards for Best Input Device, Turbo Mouse is quicker, more precise and easier to use than any other mouse. Because the ball is on top, you move only the ball, not the whole mouse. Its automatic acceleration senses the speed at which you're working and moves the cursor further when you move faster. Roll the ball slowly for 200 DPI pin-point precision. Roll it quickly and you'll fly across even the biggest screen.

Kensington List \$169
#1411 Turbo Mouse ADB \$107
#1292 Turbo Mouse Plus \$107

WHAT THE POSTSCRIPT® TYPE LIBRARY HAS FINALLY COME TO.

Agfa has developed a simple way to add new POSTSCRIPT fonts when you really need them.

We've put over 1,650 POSTSCRIPT fonts—all compatible with ATM®—including nearly 1,000 Adobe® typefaces on a single compact disc. As a Macintosh® user, you can gain instant access to single volumes, or to the entire collection. Then, add new

faces from the most complete Type 1 font selection when your next rush job walks in the door.

All you need is the AgfaType™ CD-ROM, a CD drive and the access codes. You get the codes by simply making a call to our 800 number and placing an order. You get the AgfaType CD-

ROM
and a
Toshiba CD
drive by taking

advantage of our special offer. Now, new technology is more affordable than ever. Didn't you know that someday it would come to this?

\$61

Get the AgfaType CD-ROM V2.1 with 20 exclusive Agfa headline faces unlocked plus a Pi and Symbols font of your choice. Order #0326

ONE Word for EtherNet and LocalTalk: PhoneNET

PhoneNET StarController® EN Series 500

The StarController EN repeats Ethernet signals over 12 ports and monitors network traffic and error rates. It's fully compliant with the IEEE 10BaseT standard, so it supports a variety of Ethernet devices, from PCs to VAX mini-computers. It continuously checks the connection to each device, automatically shutting off unused ports to prevent disruptive signal error. StarCommand 2.0 management software, included with the PhoneNET Star Controller EN, continuously monitors your network as a background application running under MultiFinder.

List: \$2,495

#3333 PhoneNET Series 500 \$1,588

PhoneNET StarController Series 300

The StarController hub is a multiport LocalTalk repeater you mount in the telephone wiring closet. It connects all your network devices together in a star configuration, repeating and amplifying signals over existing telephone wire. Extend your network to as many as 48 locations. Easy-to-read LED displays on the StarController give you a summary of traffic on each of the 12 ports and alert you to signal errors. Manage your LocalTalk and Ethernet StarController hubs from the same Macintosh.

Ethernet Cards for SE/30 and Mac IIs

The 10BASE-T compliant PhoneNET Card enables Macintosh SE/30 or Macintosh II family users to use the increased speed and bandwidth of Ethernet running over ordinary telephone wire. A built-in, 10BASE-T transceiver lets you attach twisted-pair telephone cable directly to your Macintosh—no external connector or transceiver is needed. The PhoneNETCard comes with Timbuktu software.

Your Business is Important to Us

**The Mac
Zone**
Established 1986

Thousands of our satisfied and loyal customers have made us the world's third largest direct market reseller of Macintosh products. We would like to introduce you to some of our team members who make it all happen. From great service, low prices, overnight delivery and most of all our knowledgeable sales advisors – it's truly the people at the MacZone who are working extra hard for YOU... our customer.

Customer Service

"Although there are many kinds of Macintosh companies in the market place today, the MacZone is the company that puts customers first, providing them with the best service. The way we do business everyday is based on our belief that selling you products is not enough. We want you to be a satisfied MacZone customer. We are determined to do our best and provide the special service necessary to ensure total customer satisfaction." – Ann Gilbert, Customer Service Supervisor

Sales

Our staff of over 25 people are the finest in the industry. They know their products and know how to assist you by suggesting the products that best suits your needs. Our MacAdvisors are highly trained by developers of Mac products and use these products themselves. Thousands of new products are introduced into the market every year, and we make sure you only get the best of them. Call one of our advisors today for the best service you can get."

– David Burcham, Sales Manager

Technical Support

"The Apple Macintosh is an amazing computer. No matter what Mac you have, we can help you enhance it. The technical support staff at the MacZone is dedicated to providing you with the best possible information and service. Many of us have had the opportunity to work with Apple's upcoming System 7.0 and its new disk and file sharing capabilities. I believe the many great new features of System 7.0 will require a lot of customers to upgrade their processors and memory. We are ready to help you make an intelligent and knowledgeable decision."

– Dan Stinson, Technical Support Manager

Corporate Sales

"Here at the MacZone, we understand the frustrations the corporate, government and institutional buyer faces. Our Corporate Department will do everything in its power to make your purchasing hassle-free. The reason is simple. Our corporate account executives have vast experience in dealing with requests for quotes, purchase orders and institutional processes. We strive to work within YOUR organization's purchasing system to make YOUR job easier. The MacZone also has a special toll-free corporate line (800-

258-0882) to speed up your order placing even more! The reason AT & T, General Electric, NASA, Harvard and hundreds of other organizations come to the MacZone is because we offer guaranteed product availability and low prices. Give us a call, you'll be glad you did."

– Joe Rand, Corporate Account Executive

Shipping and Delivery

"Shipping thousands of orders requires precision handling. We understand the need to ship the correct product the first time because your satisfaction is important to us. Your order is packaged carefully in environmentally safe packaging material and shipped overnight via Airborne Express with the greatest care. Our goal is to ship the right product the first time, every time. Our state of the art computer package tracking system allows us to guarantee next business day delivery." – Roger Rudolph, Warehouse Manager

Purchasing

"I derive tremendous satisfaction when I know that our buyers have negotiated low prices for our customers. My job is to ensure availability of the latest products at prices below our competition so that we can pass significant savings on to you." – Jon Jaffe, Purchasing Manager

Exploring the Mac

INFORMATION SOURCES THAT MAKE IT EASIER

T

BY DEBORAH BRANSCUM

here's a dazzling array of information out there that can add to one's knowledge about the Macintosh. Here's a brief and opinionated overview of resources that *Macworld* editors have found useful or entertaining.

Newsletters The *FileMaker Report* has been in my good graces recently because it solved a thorny problem: how to sort on repeating fields in a record without sorting on the first entry. Late one afternoon I called Claris tech support begging for an answer to the mystery. The kindly technician who took my call was unable to help but said that according to rumor, the *FileMaker Report* folks had an answer. Rumor was right and a forthcoming issue should spell out the solution.

The *FileMaker Report* regularly showcases tips and tutorials for this popular database. A 5-issue subscription costs \$36 in the United States; 20 issues go for \$116. Contact Elk Horn Publishing in Freedom, California, by phone (408/761-5466) or fax (408/761-5468) for more details.

The Cobb Group of Louisville, Kentucky, publishes four monthly newsletters that provide application tips and techniques using clear and straightforward language and graphics for Macintosh users. The April issue of *Excellence*, which focuses on Excel, included an explanation of the problem of stray digits in the results of Excel formulas—and how to solve

it. In April, *Inside Microsoft Works* tackled drawing tips and a spreadsheet technique, and *Inside Word* included how-to's on overlapping text and graphics and dealing with hidden text (as well as a detailed bug report). The March premier issue of *Inside HyperCard* followed the formula with tips on managing radio buttons, debugging, and using the Navigator palette.

Subscriptions for the Excel, Word, Works, and HyperCard newsletters cost \$59, \$49, \$39, and \$69, respectively. Free sample issues are available

from Cobb's customer service department at 800/223-8720. (Cobb can also be reached at 502/491-1900.)

Software A couple of interesting stacks make browsing worthwhile. A clean design distinguishes Macintosh Yellow Pages, a HyperCard directory to Macintosh hardware, software, and accessories. This guide does not cover everything, but it does cover more than 1500 products.

Product descriptions include suggested retail prices, memory requirements, and 800 numbers when available. A one-year, six-issue subscription is

available for \$69 through product manager Laura Marmorstein in Cambridge, Massachusetts. Reach her by phone at 617/577-9568.

Bomb and Crash Encyclopedia by Erik Thauvin offers brief, clear descriptions of the most common Macintosh errors and suggested solutions. Thauvin, a computer consultant, based his \$15 shareware stack in part on the expertise of the BMUG tech-support folks. You can download the Encyclopedia from the HyperCard Forum (keyword MHC) on America Online or receive it directly from Thauvin by (continues)

IT ALL STARTED INNOCENTLY ENOUGH.

Then the conflicts began.

At first we did it just for fun. A screen saver. A menu clock. But you know how it goes: you keep wanting more. A font/DA manager, then an anti-virus utility and a spell checker... soon we had a system folder full of INITs. All rushing into RAM at every startup.

Clearly, it had to stop.

First some of the INITs stopped working. Then one of our major applications just refused to run. Before long the little devils

were regularly causing system crashes with reckless abandon.

So then we found INITPicker. It clearly identifies all our INITs and lets us select which ones to run *in what order*. It can even figure out which INIT has caused a crash and prevent it from loading. So we don't have to spend hours trying to find the culprit by the process of elimination.

INITPicker. It's just a real simple program that keeps INITs real simple. Needless to say, *our* conflicts are over.

SERVICE HERO

In the spring of 1990, Brad Saunders of Rochester, New York, bought an Ehman 44MB removable drive that used a SyQuest mechanism. He had problems with strange system crashes, data corruption on some files, and occasionally, being unable to start the system. Eventually the internal hard drive in his system wouldn't mount. Saunders learned this year that SyQuest reportedly had problems with some F5E series SQ555 drives, the model he owns. Ehman referred him to SyQuest, which asked him to send the drive in for an evaluation.

A call came from engineer Pat Allen two days later. SyQuest wanted to replace Saunders's SQ555 mechanism. SCSI-related problems were brought about by the lack of shielding and filtering in the power supply, so Allen shielded it and added the proper filters as well at no charge, writes Saunders. "My 44MB Ehman now acts like a different drive. It spins up in half the time and no longer freezes my Mac."

SyQuest officials say few consumers have been affected by this problem, but the company is willing to deal with faulty products. The freeware utility SCSI Probe, generally available online or through user groups, can determine if your drive is version F5E. If you are having problems with a SyQuest-based removable drive, such as a high error rate or a loud noise during retries, contact SyQuest's tech support at 408/226-4280.

Bend Us. Shape Us. Any Way You Want To.

As long as you love us, it's all right. And love us you will. Statistical software from SPSS is designed to work the way you work. By giving you the power to enter, edit, manage, analyze and present data on virtually every type of PC, workstation, minicomputer and mainframe. By giving you better decision-making ability through the most comprehensive set of statistical procedures available. And by giving you a choice of options to meet your specific data analysis needs. So if you're thinking about statistical software, think about flexibility. Because flexibility means value. And when it comes to value, we top the charts.

The Accessibility of SPSS makes it ideal for beginners and advanced users alike. With its straightforward menus and context-sensitive help and statistical glossary, SPSS gets you started fast. And with the help of our time-saving programming facilities, including macros and a matrix language, you'll have the power to go deeper even faster. And regardless of your experience with statistics, you'll be supported by the documentation and training that's set the industry standard for over 25 years. Documentation that INFOWORLD calls "The Best in the Business."

The Statistical Procedures in SPSS give you the power to examine data more thoroughly, revealing patterns that might otherwise go unnoticed. We offer the most in-depth group of statistical procedures available, including univariate and multivariate descriptives, model building, hypothesis testing, clustering and classification, survival analysis, time series and perceptual mapping. No matter what your question, SPSS provides the flexibility to find the answer.

The Data and File Management capabilities of SPSS give you unparalleled flexibility when preparing data for analysis. With SPSS, information can be quickly reorganized, cleaned and transformed, regardless of size or structure. Multiple missing values for nonresponses can be defined and labeled according to your specifications, while built-in controls easily manage information stored in complex file formats, including custom file formats. Self-documenting portable files give you the freedom to move your analysis from one computing environment to the next, saving time and resources. And because SPSS supports most popular microcomputer file types including Lotus[®], DBF and SYLK, and offers free interfaces to such leading SQL-based database management systems as Informix[™], ORACLE[®] and Sybase[™], there's no need to re-enter data or write out intermediate files.

The Choice of Options offered by SPSS provides the flexibility to meet both your immediate and future data analysis needs. Unlike other statistical packages, we give you more than just the ability to choose between the options you may or may not need. We give you a choice of options designed to work together. Options that work as a system, providing the best possible software solution. Options for data entry and editing. Or producing publication-ready tables and reports. Options to analyze the past and help predict the future. Or to present your results with over 40 high-impact color displays, including a variety of charts and maps. No matter what you do, SPSS can help you do it better.

So if you're in the market for statistical software, keep an open mind. Go with the value of SPSS, suppliers of statistical solutions to over 2 million users worldwide. Because when you have the advantage of flexibility, the chances are you'll still be a hit tomorrow.

Call 1(800) 45-STATS or FAX (312) 329-3668.

Softy the Porcupine sez:

Only You Can Prevent Software Piracy

Software Security gives you the tools to do it.

More and more companies are looking for ethical ways to prevent theft of intellectual property. Software Security's **Mactivator** (hardware key) is just such a method. It prevents illegal execution of Macintosh programs while allowing unlimited back-up capability and unimpeded hard disk and LAN operation.

Each device is uniquely coded and can have an optional 1, 2 or 4 kilobits of on-the-fly programmable memory. *You have the right and obligation to protect your intellectual property.* Call today and find out how our tools can help you.

- Uses SCSI, but does not require ID number, completely transparent
- Optional 1, 2 or 4 Kbit of on-the-fly programmable memory
- Compatible with all Mac environments including Ver. 7.0 beta
- 32-bit clean
- No minimum order
- Made in USA, 7-10 day shipping

CONSPICUOUS CONSUMER

The Bomb and Crash Encyclopedia is a \$15 shareware stack with definitions of system failures, application failures, and failures of disks, serial ports, and clocks. My favorite advice, for one system failure: "Restart and pray."

often turn to in the office. Veteran publications include *Technical Introduction to the Macintosh Family* (Addison-Wesley, 1988) and *The Macintosh Bible* (Goldstein & Blair), which is regularly updated. The \$19.95 *Technical Introduction* paperback was recommended by one editor with these words: "Although it doesn't cover the latest hardware and software developments, the book clearly explains the concepts behind the Macintosh user interface and ties the concepts to the ROM toolbox."

The Macintosh Bible is the granddaddy of tips-and-tricks books, now in its third edition. I find its 1100-plus pages a little intimidating, but clearly others don't—the publisher claims it's the best-selling Mac book of all time. This \$28 tome includes several updates and a 30-day money-back guarantee.

More recently published is *The Big Book of Amazing Mac Facts* (Microsoft Press, 1991) by *Quick Tips* author and *Macworld* contributing editor Lon Poole. Poole's \$24.95

handbook is also a broad compilation of useful tips and techniques in an attractive, accessible layout that taught me a lot. Both books make for superb browsing.

Fans of Jim Heid's *Getting Started* column in this magazine should enjoy the *Macworld Complete Mac Handbook* (IDG Books Worldwide, 1991). This \$26.95 volume, from a subsidiary of *Macworld's* parent company, covers a broad range of topics, from how to buy a Mac to animation, System 7.0, and more.

The Macintosh Bible "What Do I Do Now?" Book (Goldstein & Blair, 1990) by Charles Rubin is a \$12 troubleshooting guide to common errors and resolutions. It's clear and simple and should help you avoid needless calls to tech support.

Typesetters often wince at the ugly publications churned out by Mac enthusiasts with more energy than style. *The Mac Is Not a Typewriter* (Peachpit Press, 1990) is a wonderful, short stylebook by Robin Williams. (continues)

Preview: Mac Yellow Pages 2.0		
CD-ROM TITLES: Desktop Marketing		Page 126
A Quarter Million Mac Users The names and addresses (often with phone numbers) of over 250,000 Mac users in the U.S. Price: \$4900.00 Memory required: 256K Semaphore Corp. 408-688-9200	Irv Brechner's Industry Lists Ten computer industry mailing lists (stores, developers, VARs, consultants, distributors, dealers, journalists, etc.) Price: \$1900.00 Memory required: 256K Semaphore Corp. 408-688-9200	Z-5 National Postal Service database of U.S. addresses and five-digit zip codes (includes streets, cities, counties, many buildings). Price: \$299.00 Memory required: 256K Semaphore Corp. 408-688-9200

The Macintosh Yellow Pages is a mixed bag. It's fun to browse, but the information is sometimes incomplete. Version 2.0 lists only eight Mac books, for example, and information in two of the CD ROM listings here is outdated. More popular categories are more complete.

Your business is safe with us.
Especially when it's really rolling.

Whatever business you're in, we're ready to roll in just about any size, capacity or factory formatted disk you need. And if business is really moving, look into our 4 megabyte diskette — it's ready for your new system whenever you are.

That's why more business protects important information on 3M brand diskettes and data cartridges than any other brand in the world.

The Evolution of Small Bu

Introducing Accountant, Inc. 2.0

The leading integrated, Macintosh accounting system for small business.

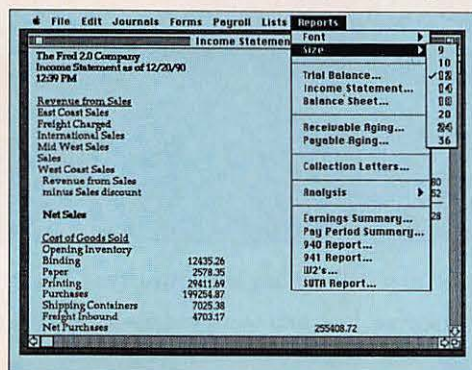

Accountant, Inc. 2.0 is changing the way small business keeps its books. Intuitive and fast, it provides more flexibility, power and reporting — with less work. It is the premier integrated accounting system for the Mac, leading a new generation of financial management software.

With general ledger, accounts receivable and payables, inventory, payroll, even project management — Accountant, Inc. is the only complete integrated accounting system. That

means when you load the program, everything is there at your fingertips. And, you can move from one task to another, seamlessly.

That's critical in a small business where you wear many hats — sales by day, payroll and purchasing by night, marketing on

Use any font and size to customize your reports.

payroll or any other task that needs immediate attention.

Instant Reports.

Up-to-date information is also critical in a small business. When your resources are tight, you want to make the most of them. And you can if you are able to interpret the information in your accounting system. With Accountant, Inc. you have more than just accounting data — you've got sales, marketing, inventory, payroll, and other analysis in all shapes and forms.

We've added to Accountant, Inc.'s already extensive reporting formats — now over 100 in all — to tell you anything you need to know. And you can select any font and size to make reports look great too.

Accountant, Inc. has the uncanny ability to take everything you've given it during the day and interpret what's really going on. Account agings and transaction listings, income statements, balance sheets, payroll reports and sales breakdowns any way you like, inventory levels, back orders and more. Sharpen the focus with Accountant, Inc.'s advanced analysis tools to see who's ordering what, who owes money, when a certain customer placed his last order and how he's doing on his credit line.

Every Evolution Needs a Leader.

Accountant, Inc. can handle any type of business: manufacturing, retail, professional and service companies. It's been designed with maximum flexibility, so you can configure the program to fit your business.

The new Accountant, Inc. 2.0 has even more of the same great features. We don't run you around with separate modules. Everything's designed to work together, so you'll see your information flow smoothly throughout your organization, the way it was meant to.

Easier Than Ever.

Because you don't have a lot of time, Accountant, Inc. handles all of your company's time-consuming financial details. Everything from writing checks, invoices and credit memos to creating insightful reports, meticulous breakdowns and extensive analysis. It makes your life easier too — from automatically tracking back orders to reconciling the checkbooks. Pay bills by clicking on them, create invoices by filling in a form. And the program takes care of all

Business Accounting.

the tedious posting and balancing automatically.

Accountant, Inc.'s built-in power gives you the flexibility to turn on a dime, like the rest of your business does.

Service company invoices are formatted to allow plenty of written description for each item.

You'll find Accountant, Inc. is easy to set up. With excellent tutorials and many sample companies, it's a breeze to learn. Accountant, Inc. is backed by a national network of independent, qualified installers who can install and train on site.

Investing in the Future.

Your accounting system is an important investment. It's important to invest in a system that will grow with you.

Accountant, Inc. is designed for growth. If your business grows faster than you expect, you'll be able to upgrade to a multi-user version of Accountant, Inc. (available this summer). That means as many people as you want can use Accountant, Inc. at the same time.

Like Apple, we believe in providing our customers with a clear upgrade path when we offer new technology. With the multi-user version, you'll be able to trade up easily, without any changes to your files and without any new training. And we'll even give you a generous rebate on the version you buy today.

System 7® Savvy.

Apple's long-awaited System 7 software is here, and in the future Accountant, Inc. will be one of the first programs that takes System 7 capabilities to their outer limits.

For example, our System 7 compatible version will link Accountant, Inc. with

forms design software, enabling you to create fully customizable forms. You can make your invoices, purchase orders, statements and other forms look exactly how you want them to.

How'd you like to have your reports automatically create 3-D charts? With System 7's publish and subscribe feature, Accountant, Inc. and a graph program will take your plain old text reports and bring them to life, instantly.

Today, Accountant, Inc. version 2.0 is the most exciting accounting and financial management software available for the Macintosh. And tomorrow, with multi-user and System 7 capabilities, Accountant, Inc. will continue to evolve as the leading edge in Macintosh accounting.

Minimum Hardware Requirements: Apple Macintosh with 1 megabyte of memory (2 megabytes recommended) and hard disk drive. Works with Plus, SE, SE/30, II, IIx, IIcx, IIfx, IIfx, Portable, Classic, si, LC, ImageWriter, LaserWriter, StyleWriter, Appleshare and Multifinder.

This \$9.95 volume shows the typesetting-impaired how to get professional results from the Mac.

Although you might not know it from Apple's latest introductions, there are still dot matrix printers out in the world. *Macintosh Printer Secrets* (Hayden, 1990) by Larry Pina is a \$34.95 guide to setup, repair, and upgrade for such printers.

The following three volumes aren't Mac-specific but make for interesting reads. *Cyberpunk* (Simon & Schuster, 1991), \$22.95, by Katie Hafner and John Markoff, reveals the compelling stories behind several young hackers who clashed with the law, including Robert Morris, Jr., the Cornell student whose virus brought down the Internet network.

Rogue Programs: Viruses, Worms, and Trojan Horses (VNR Computer Library, 1990) and *Computers Under Attack: Intruders, Worms, and Viruses* (ACM Press, 1990) are collections of academic and professional articles covering the mechanics, law, and ethics of computer programs gone wrong. *Rogue Programs*, edited by Lance J. Hoffman, is priced at \$32.95; *Computers Under Attack*, edited by Peter J. Denning, is \$18.95.

Bookstores If you can't find the computer books you want locally, consider buying by mail through one of the following bookshops. Computer Literacy, in San Jose, California, can be reached at 408/435-1118. Opamp Technical Books in Los Angeles is at 213/464-4322. Powell Technical Bookstore in Portland, Oregon, is available at 503/228-3906 or 800/225-6911. And Quantum Books, in Cambridge, Massachusetts, can be reached at 617/494-5042.

For more Mac resources, see the *Conspicuous Consumer* column from June 1990. ■

.....
Send nominees for sainthood to *Service Heroes*, Macworld, 501 Second St., San Francisco, CA 94107 or via AppleLink (Macworld1) or America Online (Branscum). Conversely, drop Conspicuous Consumer a line if a company is ignoring you.

PRACTICE SAFE STORAGE.

The larger your network becomes, the greater your need to back up. And the less time you have to do just that.

Peripheral Vision DAT back-up subsystems give you that time, providing large capacity archiving capabilities (1.3 gb - 2.0 gb) at unrivaled speeds (11 mb/sec.). And with one setup procedure it's fully unattended, allowing overnight back-up with no network downtime.

As with all Peripheral Vision back-up products, award winning Retrospect® archiving utilities are included at no extra charge. And we back up our commitment to you with a full year warranty, and our 30 day refund or replacement policy.

Call us toll free at 1.800.800.7868.

NOW THAT 10GB FITS ON AN 8MM TAPE, WHAT ARE YOU WAITING FOR?

**Tape Backup Systems
Starting At 150 MB**

You don't need to wait hours to change tapes.

You don't need to wait months for other storage technologies to catch up.

One 8mm tape drive will already deliver more than they promise.

It's the digital CY-8200, now with optional data compression. And you can get it exclusively from Contemporary Cybernetics Group.

With data compression, the CY-8200 can quadruple the amount of data you can load on an 8mm cassette that fits neatly in your shirt pocket. Meaning the already tremendous savings in man hours, media costs, storage and shipping are multiplied by four.

Until now, the best 8mm drive on the market stored an impressive 2.5 GB per tape at speeds up to 15 MB per minute.

True "Plug-And-Play" Compatibility With:

Alliant	DEC 3100	IBM S/36	Pertec
Alpha Micro	DEC HSC	IBM AS/400	Plexus
Altos	DEC Q-Bus	Macintosh	Prime
Apollo	DEC TU/TA81	NCR	Pyramid
Arix	DEC Unibus	Novell	Sequent
AT&T	Gould	PC 386/ix	Sun
Convergent	HP	PC MS-DOS	Unisys
Data General	IBM RT	PC Xenix/Unix	Wang
and more...			

Our data compression option allows you to write up to 10 GB per tape at up to 60 MB per minute. Completely unattended.

Of course, the data compression feature is switch-selectable, so you can turn off data compression to read and write standard 8mm tapes.

Plus it's a simple upgrade for the best tape drive built: our CY-8200. Offering a complete range of standard

interfaces, a 2-line, 40-column display option, and optional security card encryption. And assuring you of full support and

a 12-month warranty from the leader in advanced 8mm helical scan technology. The CY-8200 with data compression will remain the best value in data storage for a long time to come. So now you've got many good reasons for calling us today at (804) 873-0900 and no good reason for waiting.

He hunts heads with a single piece of software.

Mike Giddings has the power to move the football. His ratings reports are studied by 12 NFL teams several times a year.

Chances are, that hot running back you see inserted into the line-up mid-season came from one of Mike's reports.

There's a staggering amount of information in them. And the stakes are high, indeed. Pick right to fill an injury, and a winning season continues. Pick wrong, and it's try again next year.

More than 5,000 players are rated. And with so much riding on the outcome, the ratings get very, very precise.

A player's speed? Of course. But what about speed on artificial turf versus grass? In rain? At home games? Or away? There are hundreds of thousands of pieces of information in all.

How does he handle all this? And publish dozens of reports a year? With a staff of three?

With a single piece of database software called FileMaker® Pro.

With it, he can analyze data to a remarkable degree. FileMaker looks for certain attributes in a player's performance, weighs them, calculates performance, and displays the rankings in 200 different formats that Mike publishes for his clients. And he can do all this without computer expertise. He's a former coach, not a hacker.

Mike's reports give coaches an edge.

With FileMaker Pro, Mike has an edge, too.

Mike Giddings is just one of over a quarter-million people using FileMaker to their advantage. If you'd like to know how to put FileMaker Pro to work in your business, call 1-800-729-2292, extension 30.

The New MacinStors® For The New Macs.®

Giant Steps. No Footprints.

The newest Macintosh® computers were designed to deliver leading edge technology in the most cost effective packages. With them, Apple has taken a giant step into the world of value. Frankly, it's a world in which we at Storage Dimensions have been doing business for some time now.

Our new slimline ZFP (zero footprint) models, for instance, reflect giant steps of their own — and leave no footprints. Tucked smartly under the Mac Classic,™ or just as smartly between the Mac si™ chassis and monitor, they're available in 50, 100, and 205 MB capacities. And they're

among the fastest in the industry. What's more, they include comprehensive disk management software, with advanced features like disk mirroring and volume spanning.

In fact, features like these have always been included across the entire MacinStor product family. Whether it's a 650 MB internal or a 4 GB external. Whether it's an erasable optical solution or a hard disk standalone solution, every MacinStor delivers *more for your money*. Because Macintosh users expect more.

Take a giant step in performance, reliability, features, support and value. Ask for more than just storage. Ask for Storage Dimensions. Call (408) 879-0300. Storage Dimensions, 2145 Hamilton Avenue, San Jose, CA 95125.

MACWORLD NEWS

by Dan Littman and Tom Moran

It's a Color Calibrator and a Floor Wax

RasterOps announced in mid-May its CorrectColor Calibrator, a device that calibrates 24-bit displays, printers, and scanners and measures colors on paper and film. Intended for publishing professionals, the RasterOps calibrator uses four optical sensing devices in a suction cup that attaches to a monitor. Three of the optical sensors measure RGB, and the fourth measures white light. The sensing device, together with its base unit (called the Color Integration Processor) and various standard attachments, acts as a densitometer for measuring colors on film, as a colorimeter for calibrating a monitor and measuring colors on paper, and as a luminance-measuring device that can accurately set the color temperature of certain monitors.

To set the base color temperature of a monitor, the calibrator needs to know the size and precise refresh rate of the monitor so that it can synchronize with the monitor's scanning beam. Currently the CorrectColor Calibrator looks for identification in the monitor's ROM and then looks up the monitor's refresh rate in a table kept in the calibrator. However, for marketing reasons, RasterOps includes the necessary information only for Apple's 13-inch color monitor, some Sun monitors, and all RasterOps 24-bit displays, the company said. To set the color temperature, the user places the sensing device over a white rectangle on screen, and the software makes a contour map of the screen and changes the monitor's gamma tables. A total of 49 rectangles appear

The RasterOps CorrectColor Calibrator calibrates 24-bit monitors, printers, and scanners. Its four optical sensors can also measure color on paper or on transparencies.

in a 7 by 7 grid, so 49 measurements are necessary. However, this process usually needs to be done only once per monitor.

To calibrate a scanner, the user places a reference image in the scanner and the calibrator software puts it on screen next to a disk-stored copy of the same image. Differences between the two images tell the calibrator how to calibrate the scanner. Special attachments that come with the sensing device let you use a similar process to calibrate a printer or film recorder. RasterOps said the calibrator will support any standard color space.

RasterOps began shipping the CorrectColor Calibrator to developers of publishing software at the end of April, and expected volume shipments to end-users to begin in May.

RasterOps expects developers to make changes to their applications to help them work with the calibrator. The list price for the CorrectColor Calibrator was not set at press time, but RasterOps predicted it would be around \$3000. The company will provide an ADB version for the Macintosh, and a serial-port version for PCs. For more information, contact RasterOps in Santa Clara, California, at 408/562-4000.—T.M.

Soft TV

Playing full-motion video on a Macintosh screen has until now required special hardware to convert input from a tape, laser disc, or video camera. (continues)

THE PRIVATE LIFE OF FRED B. DULL.

Laura Lovely, up and coming starlet, is seen on the arm of Fred B. Dull at the Peacock Hilton in Las Vegas. Dull, the entrepreneurial paper clip king, flew in on his private Concorde with a 45-carat diamond ring for his birthday girl.

Winner at Le Mans, Fred B. Dull, known as a man who loves to live on the edge, receives yet another trophy to add to his collection. Purportedly bored by constant victory, Dull plans to take a year off by circumnavigating the globe in his 110-foot yacht, "The Dinghy."

Fred B. Dull scores again. Finding life too serene on his 150,000-acre Texas ranch last week, Dull imported the entire Argentine polo team for one afternoon of play. Dull reportedly found the day to be fairly amusing.

Fred B. Dull flips his cigarette boat, "Le Cool," into a double corkscrew somersault on Lake Washington and comes up smiling, going on to win his heat and the grand trophy. "This baby is really built," says Dull, as he quaffs Dom Perignon in the winner's circle.

How to improve your personal image.

Introducing the new TurboPS Personal Series laser printers.

Take it from Fred B. Dull. With NewGen™ TurboPS Personal Series printers, your documents will look amazingly crisp, clean and professional.

With our new line of personal PostScript®-compatible printers, you can greatly enhance images beyond your wildest imagination. The TurboPS/400p™ (400 dpi) and the TurboPS/300p™ (300 dpi), both offer the convenience and compactness of a personal printer. And proprietary features the competition can't touch.

Like Image Enhancement Technology (IET)™, standard on the TurboPS/400p, to smooth characters, lines and curves. And Automatic Recognition Technology (ART)™ that smartly selects

interfaces and emulations without operator intervention.

A second paper tray, memory cards, SCSI interface and other I/O expansions are among the options when you're ready to upgrade.

All this at a surprisingly low price.

To learn more, or for your nearest Authorized Dealer, contact NewGen today. The NewGen TurboPS Personal Series laser printers. If they can do this much for Fred B. Dull, just think what they can do for you.

Dealer inquiries welcome.

Cricket Software veteran Jim Rafferty is developing software-only tools to pull compressed video from a hard drive, decompress it, synchronize digitized sound, and play it in real time.

Unfortunately, Rafferty says, a standard Macintosh IIci tops out at drawing a 200-by-150-pixel video window at 15 frames per second. That's no substitute for a VCR, but it is good enough to preview a movie, study an animated detail from an on-disk tutorial, or edit a video.

Rafferty's software is in three modules code-named Hollywood (for transferring video from a video source to a hard drive—this requires a frame grabber), ClipEditor, and Playback. The modules share a starkly simple interface—the TV window; a few buttons for functions like stop, start, and fast forward; and a frame number display.

But behind the simple interface is a complete video architecture enabling a user to splice and dice clips; preview at different compression levels; control hardware such as tape decks, special-effects boards, and audio digitizers; and add new device drivers, compression algorithms, and other tools as they're released. Rafferty is also developing similar, file-compatible products for DOS and Windows.

Rafferty plans to "productize" his technology, but the tools will be most useful for other companies—for example, a publisher could include Playback on a CD ROM full of video, or a stackware developer could provide video support in an authoring system.

Rumors abound that Apple is developing video extensions for the Mac, but at press time it was unclear how Rafferty's software will compare with Apple's.

For information about licensing agreements, call Commotion Technology in Redwood City, California, at 415/367-4919.—D.L.

Digital video is coming to the Mac: Jim Rafferty with several videos cued up on his Mac and ready to roll.

MICHAEL SEXTON

Large-Screen Graphics Boards for the LC and IIci

SuperMac has designed 8-bit boards that support monitors as large as 21 inches diagonally for the Macintosh LC and the IIci. The board for the IIci, called the Spectrum/8 si, plugs directly into the IIci's slot, making an adapter board unnecessary. The Spectrum/8 si is compatible with Apple monitors and with 16-inch, 19-inch, and 21-inch monitors from SuperMac and other vendors, according to SuperMac.

The board for the LC, called the Spectrum/8 LC, contains all the functions of the IIci board and draws only 4 watts, well within the LC's power

budget. Both boards have a 75Hz refresh rate to eliminate flicker.

Both boards also come with SuperMac's hardware pan-and-zoom feature, and the company's Virtual Desktop, which effectively increases resolution to 4096 by 1536 for viewing large documents.

SuperMac began to ship the new products in late March. The suggested retail price is \$999 for either board. The company is also offering for \$189 a 68882 math coprocessor that plugs into the Spectrum/8 si. For more information, contact SuperMac in Sunnyvale, California, at 408/245-2202.—T.M.

The Thinking Mac's Book

With 26 million copies in print, Jacqueline Susann's *Valley of the Dolls* is the best-selling novel of all time. Freelance writer and self-taught artificial intelligence expert Scott French hopes to duplicate its success with *Just This Once*, a Susann knockoff written with the help of expert system software running on a Macintosh IIcx.

Both novels focus on the drug and sex addictions of music and movie stars. Both have the same (continues)

ERIC HARGRE

SuperMac's 8-bit color boards for the Macintosh LC and the IIci, the Spectrum/8 LC (left) and the Spectrum/8 si, support 16-inch, 19-inch, or 21-inch color monitors.

Now you can travel from here to there with twice the horsepower.

Getting from your Macintosh to virtually any fax machine in the world is now a lot faster.

Because the new 9600-bps Abaton InterFax™24/96 gets your message across twice as fast as before. And since the InterFax software compresses the file before sending it out, you spend even less time faxing than with any other 9600-bps fax/modem.

But we didn't just double the raw output speed, we made it easier to use. We included direct scan support, so you can fax art and photos straight from the scanner with excellent resolution. We also made the software easier to use — it's as simple as printing to any printer. And we made the InterFax work in background (with or without Multifinder), so you can get back

to work while your Mac faxes. You can even schedule when faxes are sent to take advantage of lower phone rates.

As an added plus, the new InterFax also works as a 2400-bps Hayes-compatible data modem with MNP 5 error correction. All these features together made *MacUser* name the InterFax 24/96 the best communication product of 1989.

If you want to get from here to wherever with twice the horsepower, call Abaton at 1-800-444-5321, or fax a note and your business card to (415) 683-2956. The new InterFax 24/96 will make your ideas easier to publish. Anywhere.

Introducing the Interfax 24/96

Circle 43 on reader service card

style, and for the most part, both use the same vocabulary. French analyzed the entire text of *Valley of the Dolls* for parts of speech, words associated with particular characters, words relevant to a time in the story, and so on. He updated the vocabulary with terms for freebasing cocaine and for describing sex in greater detail than Susann did in 1966.

French developed his expert system with Neuron Data's Nextra and Nexpert Object. Nextra helped him convert his study of Susann's style into rules for advancing the plot, determining characters' emotional reactions, and selecting words; Nexpert Object applied the hundreds of rules.

French claims that he wrote about 10 percent of the text without the Macintosh, the Mac wrote 25 percent without him, and the two revised each other's work to produce the rest. French remained in control, of course, feeding the computer suggestions about characters and situations, to which it responded with text that he then edited to eliminate irrational dialogue or action. The computer seems to have worked somewhat like an in-between, an animation artist who draws the frames in between key frames drawn by a master animator.

French acknowledges that his system can imitate only linear, straightforward writing without complex syntax and metaphor or great intuitive leaps. Many best-sellers have none of these qualities, though, and *Just This Once* raises high-stakes intellectual-property issues. He has not sold the book yet, but French's literary agent describes it as "very commercial" and has found French a copyright attorney to fend off a lawsuit that is now threatened by Susann's estate.

Neuron Data is in Palo Alto, California, at 415/321-4488.—Ann Garrison

Is it writing, or is it programming? Scott French wrote a pulp novel with the help of Nexpert Object.

The Spirit of 7-Point-0

Those Apple patriots in the Claris building at the corner of Bunker Hill Lane and Patrick Henry Drive are getting ready for some System 7.0 action. On the Claris roll call are

- MacWrite Pro
- PipeLine, a tool for managing the tangled web of published and subscribed-to files (not expected to be released this year)
- Resolve (a spreadsheet based on Wingz)
- MacProject II 2.5
- HyperCard 2.1
- programmers' guidelines for making other applications able to communicate with Claris applications

MacWrite Pro is the big news. It has real style sheets for both characters and paragraphs, tracking, a Word-like section feature, and a frame-based interface that can wrap text around graphic elements the way Rag-Time and QuarkXPress do. MacWrite Pro will support external add-ons and will ship with one for creating tables and another for adding notes. The program is expected to list for \$249.

Resolve looks a lot like Wingz but, in addition to 7.0 features, Resolve adds such Claris standards as the Claris spelling checker and the MacDraw tool palettes. Resolve's new interface has some nice touches, like including the arguments when you paste a function into a cell, and, says Claris, Resolve lacks bugs provided in the Informix product. Resolve will list for \$399.

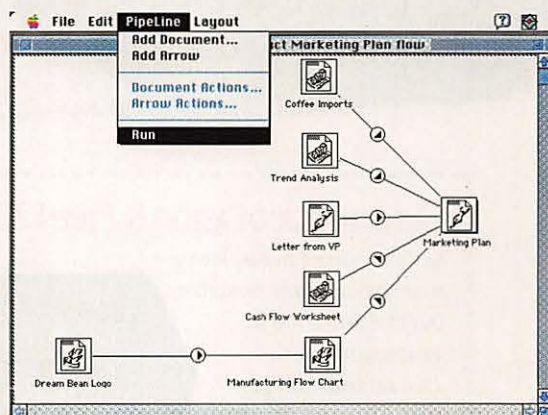

HyperCard version 2.1 and MacProject II 2.5 are 7.0-smart upgrades. For example, MacProject, which will list for \$499, will be able to run Resolve scripts to generate and update graphs inside MacProject files, and Resolve will be able to use HyperCard 2.1's Data Access Language support to bring mainframe data into worksheets.

For more information, contact Claris in Santa Clara, California, at 408/987-7000.—D.L.

HP Unveils 4-ppm and 17-ppm Printers

Hewlett-Packard has recently introduced the HP LaserJet IIIP and the HP LaserJet IIISi, laser printers that produce 4 pages per minute and 17 pages per minute, respectively. The LaserJet IIIP improves on the existing LaserJet IIP, with higher performance and HP's Resolution Enhancement Technology (RET).

The 300-dpi IIISi, HP's first venture into high-speed laser printers for personal computers, also includes (continues)

The shape of things to come: Claris's PipeLine is a good example of the new utilities System 7 will spawn.

RET and has a toner cartridge that contains unusually fine toner particles. This combination produces output rivaling that of printers with 600-dpi resolution, according to HP. The IIISi incorporates a RISC processor for faster printing. The printer has two 500-sheet input trays and produces up to 50,000 printed pages a month.

The IIISi lists for \$5495 and began shipping in volume in early March. An option for printing on both sides of the paper also began shipping in March at a suggested list price of \$695. A power envelope feeder going for \$495 should be available this summer.

Neither printer is currently available in a model designed specifically for the Mac, but Macintosh users can adapt the IIIP with the \$275 HP AppleTalk Interface Kit, an additional 1MB of LaserJet RAM that lists for \$230, and the \$695 HP LaserJet PostScript Cartridge. The IIISi can connect to Macs (and PCs at the same time) via the BridgePort 2674, a \$595 intelligent switching device from Extended Systems. Hewlett-Packard said it expects to offer both printers in Mac versions sometime in the fall.

For the IIISi to work with the BridgePort 2674 (and thus the Mac), it must have HP's \$895 PostScript upgrade, which includes extra RAM. Extended Systems is currently shipping the BridgePort 2674.

ANNE MADLER

The \$895 Radius FPD full-page display works with the Classic and with most higher-end Macintoshes.

For more information, contact HP at 800/752-0900, or Extended Systems in Boise, Idaho, at 208/322-7575.—T.M.

Radius Reintroduces Its Full-Page Display

Despite the apparent success of the monochrome Radius Pivot monitor and the recent introduction of the Color Pivot, Radius has decided to reintroduce the Radius FPD, a full-page display that is fixed in portrait mode but costs several hundred dollars less than the monochrome Pivot. The company says it was influenced by the tremen-

dous success of the Macintosh Classic and Mac LC systems. When the first Pivot was introduced, in March 1990, the company discontinued its original FPD, which had been the first full-page monochrome monitor for the Mac. Radius said at the time that it expected to compete through high volume and by offering the additional feature of pivoting, but conceded that the mechanically complex Pivot monitors are inherently more dif-

ficult and costly to make.

The new Radius FPD lists for \$895 and has been improved over the old model, Radius says. The monitor offers a resolution of 640 by 870 pixels at 78 dpi, and comes with RadiusWare screen-utility software. Although it works in monochrome with the Classic, the FPD can provide gray scale when connected to a Mac with built-in video or an adapter board. The FPD is currently incompatible with the Plus or other monochrome Macs that lack expansion slots.

The Radius FPD began shipping in the middle of April, according to the company. Radius began offering a series of adapter boards for the FPD at the same time. The monochrome adapter boards for the Classic and SE list for \$295, while boards for the LC, SE/30, and Macs that include the NuBus have a list price of \$395. For \$795 Radius is offering an 8-bit adapter board for the Mac LC. For more information, contact Radius at 408/434-1010.—T.M.

STEVEN BARATZ

The HP LaserJet IIISi prints 17 pages per minute, while the HP LaserJet IIIP produces 4 ppm. Both printers incorporate HP's Resolution Enhancement Technology.

Big Words

The dearth of Mac products for retrieving information from gigabytes of text on hard drives or CD ROMs is both cause and consequence of the Mac's weak presence in insurance and legal offices, government, and other text-in-

MANUELO PAGANELLI

Congressional Quarterly's information systems director Ron Knott (left) and publisher Neal Skein. *CQ* runs on Personal Librarian.

tensive areas. Now one of the most interesting text-searching products for UNIX and Windows is being moved to the Mac.

The Mac version of Personal Librarian (as the Windows version is called—the Mac product is still unnamed) will have some unusual features including the ability to automatically generate a list of terms related to a search term. For example, in searching the complete text of last year's *New York Times* for the word *Nicaragua*, Personal Librarian might recommend also searching for *Chamorro*, *Contra*, *Miami*, and *Ortega*. Personal Librarian can search using adjacency and proximity, root-matching, and wild cards, as well as Boolean operators and a more accurate technique called *post-Boolean*. Retrievals are ranked by relevance.

The first Mac version's feature set is not completely fixed. Features in the works include support for bitmapped images in a database; forms-design tools for customizing the interface and simplifying searches of structured data (for example, a newspaper database with article date, author, and headline in separate fields); support for SGML (the federal government's standard file-description system), including hypertext jump-to buttons; and support for non-text-based hypermedia data types, such as sound.

Personal Librarian is built on Callable Personal Librarian (CPL), a set of programming tools available separately for developing custom systems. CPL developers can create applications that read, index, and display external files such as archived word processor and page-layout files. The

programming tools also support indexing and searching of incoming data in real time—for example, from a news wire.

Pricing for the Mac product will probably be about the same as for the Windows product, which lists for \$895. CPL starts at \$20,000. For more information, call Personal Library Software in Rockville, Maryland, at 301/926-1402.—D.L.

QMS and NEC Printers Work with Macs and PCs

Both QMS and NEC Technologies have introduced 8-ppm laser printers that can work with Macs and PCs over a network. The QMS printers are the QMS-PS 815 and 825; both feature a new Canon print engine with improved front-panel LCD controls. The 815 and 825 offer QMS's Emulation Sensing Processor, which senses whether an incoming file is in PCL (on the PC side) or PostScript (from a PC or Mac). Both QMS printers use a 20MHz 68020 microprocessor that speeds up the rasterizing of the print image. The only difference between the two is that the 815 has just one 200-sheet paper feeder, while the 825 has two. Both printers accept letter- or legal-size paper and come with 45 PostScript fonts. They also have buffers

that allow their AppleTalk, parallel, and serial ports to all accept data at the same time.

The NEC SilentWriter2 990, designed for stand-alone use or for small graphic arts or CAD/CAM workgroups, can also accept PostScript or PCL files, but only accepts one file at a time. Users must go to the printer and manually select the AppleTalk port, parallel port, or serial port if the desired interface is not already chosen. Macintosh users sending PostScript files will get a "printer not found" message if the printer is not set to receive via AppleTalk. For DOS machines, NEC includes a utility called the NEC Printer Control Panel (from LaserTools), which appends a header to files, telling the printer whether the files are in PostScript or PCL.

The SilentWriter2 990 has a Weitek XL-8200 RISC processor that makes the printer as much as seven times faster than most PostScript printers, according to NEC. The printer comes with 2MB of RAM, 35 Adobe fonts, and an emulation of the Hewlett-Packard LaserJet IIP that includes 12 fonts for PCL. It has one 200-sheet feeder for letter- or legal-size paper. To accommodate an external hard drive that could store forms and additional fonts, the NEC printer has a SCSI interface. The NEC printer and the QMS printers all have 300-dpi resolution. (continues)

JEANNE STACK

The NEC SilentWriter2 990 (left) and the QMS-PS 815 can tell if a file is PostScript or PCL. The NEC printer has a speedy RISC processor; the QMS accepts several files at once.

Two LocalTalk Hubs

LocalSwitch

Eight processors service eight sets of ports concurrently.

StarController

One processor services six sets of ports one at a time.

The SilentWriter2 990, shipping now, has a suggested list price of \$4495. The QMS-PS 815 and the QMS-PS 825, both also shipping, list for \$4995 and \$5995, respectively. For more information, contact NEC in Boxborough, Massachusetts, at 508/264-8000, or QMS in Mobile, Alabama, at 205/633-4300.—T.M.

Birth of a Star

Like hot gases speeding away from the center of the universe, Macintosh network technology is coalescing into stars.

Farallon's StarController and Nuvotech's TurboStar are facing competition from a new kind of network switching-hub. A new company, Tribe Computer Works, whose president Jim Li previously worked on Thinking Machines' parallel-processing supercomputers, is applying the strength of multiple processors to Tribe's LocalSwitch star-configuration network hub.

The LocalSwitch is a 16-port hub with 8 microprocessors; each links a pair of ports for incoming and outgoing signals. For example, when a user prints a file, it goes from the Macin-

tosh to the printer selected in the Chooser, whereas a StarController's single microprocessor broadcasts the print request out of every port, relying on the selected printer to catch the job.

LocalSwitch's design has several advantages. It should be able to maintain throughput for up to eight connections at or near LocalTalk's 230Kbit maximum speed, whereas a StarController switches a single 230Kbit link between ports. Also, because the LocalSwitch narrowcasts its packets, it provides greater security from network snoops. However, a 16-port LocalSwitch (\$3495) costs about

twice as much per port as a StarController (\$1295). You can connect LocalSwitches to each other—to form larger networks—without routers, or through routers you can connect LocalSwitches to other networks such as Ethernet. The StarController and the LocalSwitch include network-management software.

Both companies are located in Emeryville, California, Farallon at 415/596-9000, and Tribe Computer Works at 415/547-3874.—D.L.

Look Who's Talking Now

In March, On Technology shipped a group calendar and meeting scheduler called Meeting Maker. Now it's preparing a tool that—let's hope—makes meetings obsolete.

Instant Update is like an electronic whiteboard that you can check when you have a spare moment, or like an E-mail system that files messages for everyone on a network in one big document, instead of as a series of separate notes, and provides each person with a different view of the master file. For example, several medical researchers might collaborate on writing an article. As each one completes an experiment or a statistical analysis, he or she adds the results to the master file. The next researcher to open that file can click on a button to update his or her view of the file.

The only comparable product on the Mac is Information Research's Syzygy, but Syzygy requires everyone to work on a file at the same time. Unlike Instant Update, Syzygy works via modem (On Technology's product will add this capability later) and provides draw and paint tools. Instant Update can create tables and can search for text by its contents and by who wrote it.

Instant Update supports XTND technology, so the program can read and write to Microsoft Word or other word processors, but under System 6.0.X it can't maintain live links to them.

The program will list for \$495 for two users and \$995 for five users. For (continues)

Jack Albright, systems consultant, is testing Instant Update at Du Pont's Printing and Publishing division.

TOM JACKSON

TO HEAR PEOPLE TALK, NOTHING STACKS UP TO BERNOULLI TECHNOLOGY.

"We entrust our important data to Bernoulli Drives. In fact, all of our salespeople carry one."
Aldus Corporation
April, 1991

"Bernoulli Drives are the best for reliable data transport, storage, and backup."
MacUser
February, 1991

"Considering the product's [Bernoulli's] reliability, anyone looking for removable media of this speed and capacity should consider Iomega's latest product for the Mac."
MacWorld
January, 1991

"High-impact multimedia presentations demand three basic things: capacity, performance, and protection. Bernoulli is the only removable technology that delivers all three."
MacroMind
April, 1991

"The Bernoulli is immune to head crashes, power failures, and other catastrophes to which hard disks are susceptible."
BMUG Newsletter
June, 1990

"In terms of data security, this product [Bernoulli] is way ahead of the competition: it is the only one impervious to head crashes."
PUBLISH!
January, 1991

A lot of people have had something to say about Bernoulli Technology® lately.

Probably because this unique technology makes

Bernoulli® removable-disk drives so much more than other removable storage systems. More reliable. More powerful. More transportable. In short, more of what you need in a removable-disk drive.

A word about Bernoulli Technology.

Crash-resistant—that's the key to Bernoulli Technology. Bernoulli was designed from the ground up to protect your data from the rigors of removability.

Bernoulli's sophisticated aerodynamics create an air flow, causing the flexible disk to fly up to within 1/100,000 of an inch of the read/write head without touching it (fig. 1). As the disk flies at high speed, it becomes rigid, giving you hard-disk-like performance. If the air flow is interrupted by a jolt, power surge, dust—you name it—the media simply falls away from the read/write head (fig. 2). No contact. No head crash.

Bernoulli's removable data disks take care of your data as well. In fact, they're so rugged that they can withstand an 8-foot drop to a hard surface (let alone a trip in your briefcase or the mail).

A word to the wise.

Consider—because all removable-disk drives are not the same. And the more you value your data, the more you should weigh the differences. From company service and support to system software, right down to the technology itself.

Call 1-800-777-3057.

Discover why people are talking about Bernoulli. Call for a free brochure. Then maybe you'll have a few choice words for Bernoulli yourself.

MacUser 2/91

ΩMEGA®
The Makers of Bernoulli
Circle 260 on reader service card

Type of Computer Used by Child/Student at School

Percentage of respondents

Total is over 100% because multiple responses were allowed.

The most common computer in grades K-12 is still the Apple II, with the Macintosh placing a strong second. Low-cost Macs have made respectable inroads since their October debut.

further information call On Technology in Cambridge, Massachusetts, at 617/876-0900.—D.L.

Survey: Macs in Education

This month's reader survey covers the use of Macintoshes and other personal computers in grades K-12. Among respondents, 35 percent are parents, 4 percent are teachers, and 7 percent are both parents and teachers. The Apple II dominates in schools: 72 percent of responding readers who are parents or teachers say that their children and/or students use the older Apple family of computers. The Macintosh comes in second, with 42 percent of the parents/teachers citing the Mac. IBM PCs and compatible systems are mentioned by 28 percent, Commodore systems by 5 percent, and Atari systems by 1 percent. Other computers are reported by 4 percent. Only 8 percent of the parents/teachers say that their schools have no computers. The figures add up to more than 100 percent because of multiple responses.

Although the Mac SE is mentioned by 19 percent of parents/teachers and the Plus by 19 percent, the newer low-cost Macs are already appearing in schools in fairly significant numbers. The Classic is cited by

5 percent of readers, the LC by 4 percent, and the IIsi by 4 percent. Other Macs account for 3 percent.

The age breakdown for children or students who use Macs is 10 percent in kindergarten, 20 percent in grades 1 to 3, 24 percent in grades

4 to 6, 19 percent in grades 7 to 9, and 24 percent in grades 10 to 12.

The most-mentioned application is games/entertainment, cited by 63 percent of parents/teachers. Word processing is second at 62 percent, while course-specific software is third at 47 percent. Databases and music follow at 16 percent and 14 percent, respectively. Other applications are cited by 17 percent of responding parents/teachers.

When asked the main advantage of having computers in the classroom, 35 percent of all responding readers say making learning fun, 31 percent say improved problem-solving skills, and 13 percent cite gaining job skills.—T.M.

Aldus Opens Up PageMaker

Aldus is developing two sets of tools for modifying PageMaker. One is an English-like scripting language for controlling PageMaker, and the other is Aldus Additions, an interface that enables programmers to write external applications that plug into PageMaker.

The scripting language will be able to automate executing any PageMaker command, for performing such tasks as extensive formatting of imported text and pasting up pages. Users will be able to script a task in text mode while inside PageMaker and then have PageMaker execute the script, similar to running a script in HyperCard. A later version or an Aldus Addition will provide more advanced procedural commands as well.

The Aldus announcement is clearly a response to Quark's Xtensions, a set of programming tools for writing custom plug-ins for QuarkXPress. Third-party developers and Quark have published numerous Xtensions, but Aldus would not say whether it plans to publish Aldus Additions or leave the market strictly to outside developers.

At press time, Aldus had not established pricing or a release date for either piece, but expects to complete the programming interface first. For more information, contact Aldus at 206/622-5500.—Luis Camus

VIRUS WATCH

Current viruses, Trojan horses, and worms affecting the Macintosh community.

HC

Type: Data virus
First listed in Virus Watch: 6/91
Info: Infects HyperCard stacks.
Impact: Causes the Mac to hum oddly. At press time *Macworld* did not know if HC is destructive.

nCAM

Type: Virus
First listed in Virus Watch: 5/91
Info: An nVIR clone.
Impact: Nondestructive; infects applications and system files; can cause crashes.

MDEF D

Type: Virus
First listed in Virus Watch: 5/91
Info: Infects applications and system files.
Impact: Nondestructive; can cause crashes.

COMPUTER BUSINESS TODAY AN 8-PART SPECIAL EDITION

In Today's tough competitive corporate climate timely technology decisions can have a profound effect on a corporation's performance capabilities, at every level.

"Computer Business Today" is a fast-paced special edition of Business Today whose format is strictly application-oriented "Hands On" information, with the end user in mind.

An Elite assembly of the industry's state-of-the-art products will be showcased each week beginning May 12. Pictured below is a representative window to a range of technologies featured that harness the impact of computer technology to create and solve task-specific applications from Color Presentations to Connectivity -- solutions that today's marketplace demands.

"OS" series of cost recovery systems by Infotext Systems -- for organizations that need to control costs for, or charge for telephone usage, copier activity, faxes or word processing -- 25-40% telecommunications savings realized.

"Bernoulli Box" Transportable drive by IOMEGA -- featuring a removable 44MB data cartridge. Delivering the speed and reliability of hard disks combined with the flexibility, security and unlimited storage capacity of removable media.

Xircor's external Pocket LAN Adapters available for Ethernet, Token Ring and ARCnet, have set a new standard for convenience in laptop to LAN connectivity, by eliminating the need for an internal card.

The SMART-UPS 600 by American Power Conversion -- providing complete power protection for high performance file-servers and critical workstations.

Varicolor Publishing System by Varityper -- An integrated, low cost, color image processing system that allows users to combine high fidelity color and high productivity from a desktop solution.

HP PaintWriter by Hewlett-Packard for the Macintosh -- with the power and versatility to create high-quality, bolder, brighter colors.

Okifax 600 and 650 with memory by Okidata -- fully-featured machines, offering high image-quality and reliability at very affordable prices.

"Computer Business Today". For People who use computers. Tuesday evenings, Friday and Sunday mornings. Check your local listings for time and channel information.

Tomorrow's Upgrade For Your Mac Is Only \$59*

FREE!
STEP-BY-STEP
VIDEO
INSTRUCTIONS**

A MacWarehouse Expansion Kit will dramatically increase the power of your Mac. And our fast, reliable overnight service will have your Kit in your hands tomorrow!

MORE BRAIN POWER FOR YOUR MAC

Never again will you have to quit your word processor just to answer a question about a spread-sheet. Install extra memory and you can leave your letter open while you refer to last month's sales figures. You can edit those monstrous scanner files with advanced graphics applications or develop your own custom HyperCard stacks. More memory means more power at your fingertips.

PLUG IN INSTALLATION

Adding memory doesn't require technicians in lab coats. Just open your Mac, slide out the main circuit board and plug in your SIMMS. Our FREE video will give you STEP-BY-STEP installation instructions. Every type of Mac is covered and we think we've made it a breeze.

WHAT DO I NEED?

Our helpful sales and technical staff is standing by to answer any questions and take the mystery out of memory upgrades. Memory cards come with one megabyte on each card and are usually sold in pairs - (2 @ \$59 ea.).

The chart explains exactly what you need to achieve the desired level of performance.

To upgrade a 4-socket Mac Plus or SE to this amount of memory.	Do this: (Install in multiples of two only)
2 MB	Remove all four existing 256K SIMMS, install two 1 MB SIMMS, leave two sockets for future expansion.
2-1/2 MB	Remove only two 256K SIMMS, install two 1 MB SIMMS.
4 MB	Replace all four 256K SIMMS with four 1 MB SIMMS.
To upgrade an 8-socket Mac II, IIfx, or SE 30 to this amount of memory.	Do this: (Install in multiples of four only.)
4 MB	Remove all four existing 256K SIMMS, install four 1 MB SIMMS, leave remaining sockets for future expansion.
5 MB	Keep existing 256K SIMMS, install four 1 MB in remaining sockets.
8 MB	Remove all four 256K SIMMS, install eight 1 MB SIMMS.

To open your Mac Plus or SE, you'll need a specially designed tool - it's available from us as part of a handy tool kit for just \$9.

WHAT YOU NEED TO KNOW

Memory chips come factory-installed on plug-in cards, called SIMMS (Single Inline Memory Modules). Each one megabyte SIMMS card holds eight top quality, memory chips. We carry chips by all the major manufacturers like Texas Instruments, Intel and Samsung. We also carry the full line of Dove memory products.

Prices can vary a lot, based on quality, speed and demand. At press time our price for

1MB, 100ns SIMMS is \$59. Please call for the very latest prices and availability. Our sales staff will tell you what you need and help you make your choice an easy one.

SPEED

Do you need 80, 100 or 120 Nanosecond (ns) chips? Nanoseconds are billionths of a second, so an 80 ns chip responds faster than a 100 ns chip. The original Mac used relatively slow 150 ns memory chips. The 68020 processor reads 120 ns (or faster) chip, and the 68030 Macs like the speedier model.

OVERNIGHT DELIVERY

Place your order by 12:00 am (E), weekdays and we'll deliver overnight for just \$3.00. There's never been a better time to consider a memory upgrade. Call our toll-free number now and tomorrow morning your Mac will be off to a brand new start.

MACWAREHOUSE 30-DAY MONEY BACK GUARANTEE

If, for any reason, you are dissatisfied with your MacWAREHOUSE Memory Kit, you may return it for a full refund within thirty days of purchase. All you have to do is call us for a return authorization number and return this product, postage paid, in its original condition, with the original packaging and documentation.

ONE YEAR WARRANTY. MacWarehouse also guarantees its Memory Kits against manufacturer defects for one year from the date of purchase. We will repair the item or replace it at our discretion.

* SIMMS prices vary. Call for latest information.

** Limited Offer! Free video with purchase of 2 or more SIMMS.

OVERNIGHT DELIVERY
ONLY \$3.00
(See details below)

TrueLaser Printer (Microtek)

This revolutionary new laser printer gives you, for the first time, Truelmage support, plus PostScript and PCI compatibility, at phenomenal performance speeds. It comes with TrueType fonts, the same font technology that will go into every Macintosh running System 7.0 and IBM running Windows 3.1. And TrueLaser is smart enough to automatically switch between different printer interfaces—AppleTalk, Centronics, RS-232C—all transparent to the user. It's powered by a 32-bit RISC microprocessor, AMD's Am29000, and it's 300 dpi resolution will assure that all your graphics and layouts will come out looking their best. **INP 0162 \$2019.**

ScanMaker 1850S (Microtek)

A revolutionary new 35mm slide scanner that's perfect for desktop publishing, presentation graphics and multi-media applications. With the ScanMaker 1850S, you can scan 24 bit color and 256 shades of gray at up to 1850 dots-per-inch resolution. With a scanning area of 35mm x 35mm, it is versatile enough to scan slides in portrait and landscape mode. Included with every ScanMaker 1850S is a full version of the Eddy-Award winning Adobe Photoshop. **INP 0176 \$2459.**

FREE!

The fifth edition of Steven Bobker's *Power User's Tool Kit* is now available exclusively to MacWAREHOUSE customers. A hand-picked collection of four powerful programs on one handy disk, the newest *Tool Kit* includes *To Do!* — a unique desk accessory for organizing and implementing your daily tasks. The newest version of *Stuffit Classic*, also on the disk, will create freestanding space-saving archives of files that you can expand whenever you need them without having any special decompression software.

The **POWER USER'S TOOL KIT 5.0** is FREE from MacWAREHOUSE when you order from us. If you would like the disk, please ask for product code number AAA 0011. You pay only \$1.50 for shipping and handling. The programs are shareware, so you can try them free of charge. If you wish to continue using them, some authors ask that you pay a fee (\$10-\$25). All of the details are explained on the disk, which is yours to keep.

NEW!
Includes:
Stuffit Classic,
FlashWrite II
and *IntCalc*

FREE CATALOG!

We carry more than 2000 Macintosh products, including all the latest releases and new versions. We pride ourselves on getting new products first. Just fill in the information requested below and mail the coupon. We'll start your free, one-year subscription to the MacWAREHOUSE catalog with the next issue.

Freedom of Press Light for the Mac (Custom Applications)

Need the power of PostScript at a price you can afford? Use top-rated Freedom of Press Light to print your PostScript language documents on over 40 non-PostScript inkjet, dot matrix, and laser printers including HP DeskWriter, Laserjet and PaintJet. Works with PageMaker, Illustrator and Xpress. Includes 17 scalable, outline fonts and supports ATM and Adobe Type 1 fonts. **\$55. UT1 0185**

The "ULTIMATE" SE Carrying Case (I/O Design, Inc.)

The "ULTIMATE" SE Carrying Case is designed with the same high quality standards as other MacLuggage products. This case offers internal, padded compartments for ANY Macintosh keyboard, mouse, external hard disk and cables also holds the new Macintosh Classic. It also features 2 additional exterior pockets for everything from disks to umbrellas. Combine these features with sturdy Dupont Cordura nylon and 1/2 inch high density foam padding and you'll see why this is the "Ultimate" carrying case for your Mac. **Black: ACC 0427 \$79. Navy: ACC 0440 \$79.**

MacDraft 2.1 (Innovative Data)

Provides the tools you need to create accurate drawings on your Mac. It supports PostScript output, has a moveable geometric drawing tool palette, multiple layers (limited only by available memory), on-line symbol libraries, 44 different scales, custom line styles, dimension lines, Bezier and spline curves, automatic area calculation, and smoothing of freehand shapes. MacDraft supports 32-bit QuickDraw and custom fill patterns in both black and white and color. Reads TIFF and MacDraw II files. **CAD 0039 \$279.**

UnMouse (Microtouch)

The UnMouse does everything a mouse can—only faster, easier, and in less space. To move the cursor, simply slide your finger over the glass surface. To make a selection merely press down. The UnMouse also serves as an extended keyboard. Tap the large red button and you have a Power Keypad with 16 keys instantly available to execute macros (60 in advanced mode). With its one million touch points the UnMouse also performs as a small graphics tablet. **INP 0084 \$189.**

White Knight V.11

Supports the new ZModem protocol, as well as more versions of XModem and Kermit. It works with MultiFinder and QuickDraw and large monitors. Get a free subscription to GEnie and a free copy of Okyto with each copy of White Knight. **COM 0060 \$85.**

M.Y.O.B. 2.0

Streamlines your accounting, and delivers essential information on the status of your business. Create a sales invoice and MYOB adds the amount to Receivables, decrements the inventory, and generates the monthly customer statement. Integrating G/L, A/R, A/P, Inventory and card files. **FIN 0087 \$139.**

MacBible -

New International Version

Revolutionize the way you study the Scriptures. Includes a flexible word-and-phrase search mode, a verse mode for displaying any range of verses, and a count mode for showing statistical information about words. **BOK 0020 \$79.**

Wingz 1.1

It's like having a spreadsheet with pagelayout and presentation graphics all rolled into one. It's incredible 2D and 3D graphics will amaze you. Wingz provides over 20 different graph types, and you can rotate, elevate, and change the viewing perspective freely. **BUS 0064 \$245.**

- All major credit cards accepted. No surcharge.
- Your credit card will not be charged until your order is shipped.
- If we must ship a partial order, we pay the freight on the remaining portion.
- All U.S. shipments are insured at no extra charge.
- C.O.D. orders accepted (add \$6.00 including shipping) — \$1,000 maximum. Cash, money order, or cashier's check.
- Corporate purchase order accepted subject to credit approval.
- All products are covered by a 120 day limited warranty.
- Sales Tax: CT residents add 8%, NJ residents add 7%, Ohio residents add appropriate tax.

SHIPPING

- All orders add \$3.00 per order. We ship Airborne Express overnight unless UPS Ground delivers overnight. (Some rural areas require an extra day.)
- Orders placed by 12:00 MIDNIGHT (EST) (weekdays) for "in stock" items ship same day (barring system failure, etc.) for overnight delivery.
- C.O.D. orders ship via UPS (Blue Label if you are more than 2 days from us via UPS Ground). Charge is \$6 including shipping.
- Alaska, Hawaii, outside continental U.S., APO/FPO call 908-367-0440 for information.

*Defective software replaced immediately. Hardware replaced or repaired at our discretion. **We regret that we cannot be responsible for typographical errors.

DiskDoubler 3.1

Compresses your files when saved and expands them when opened. Shrinks any file an average of 50%. It's like getting a new hard disk at a fraction of the cost. Version 3.1 retains icons of the original document, making Disk Doubler even easier to use. Works with documents, applications and more. **\$45 UTI 0179**

Earl Weaver Baseball

Puts you in the middle of exciting major league action. Choose one of the 32 ballparks, select one of the four skill levels, and step up to the batter's box, or the pitcher's mound in the confrontation screen. Even the commissioner has a role to play in this one. **ENT 0321 \$32.**

Mac IIci Upgrades

From the 64K FastCache IIci up to the new 50 MHz Power Cache IIci - get the speed you need at a price you can afford. No matter which board you buy now, you can upgrade later direct from DayStar! **DRI 0224 (64K FastCache IIci) \$289. DRI0290 (50MHz Power-Cache IIci) \$1699.**

Design Your Own Home: Architecture or Interiors

Design your home from a library of sample plans that calculate distances, diagonals, areas, and angles, then create the interior with a showcase of hundreds of furniture shapes arrangeable in eight different views. When finished just print and begin building. **\$65. ea.**

Bookends 1.2 (Sensible Software)

Automates the process of tracking information in books and magazines. Just select authors, journals, and keywords from your Hypercard list instead of retyping them. Imports tab delimited text files from dial-up services. **WRD 0023 \$51.**

Sensible Grammar

Now runs 70% faster than before. Say goodbye to mismatched subject and verb forms, awkward language, non-standard punctuation, long sentences, and other errors that weaken your writing. Works with MS Word, Write, Works, WordPerfect, WriteNow, and MacWrite. **SPL 0018 \$51.**

Layouts

Over 200 templates to design Newsletters, Brochures, Catalogs, Flyers, Business Stationery, and Business Reply Cards. Each one ready to use without worrying about measurements, crop marks, or registration marks. Publish magazine says "Exceptional, high recommended..." MacUser rated four and a half mice! **DTP 0063 \$85.**

Microphone II 4.0

Ideal for international telecommunications. Praised for its ease of use and advanced scripting language, Microphone II 4.0 now contains faster script execution, screen speed, file transfers and new interface design tools. Supports ZMODEM transfer protocol and can operate modems at any speed from 50 to 57,600 baud. **COM 0094 \$215.**

Read My Lips

Attach sounds to documents you create using popular word processors, desktop publishing, and presentation software. Use pre-recorded sounds or record your own. Both the built-in microphones of the new Macs as well as MacRecorder are supported. **UTI 0211 \$75.**

1st Impression: The Desktop Bindery (Avery Dennison)

A fully automatic desktop binding system that replaces complicated equipment, tedious hole punching, alignment and plastic prongs. Combines advanced thermal technology with the ability to bind 10 documents at once, in seconds. **ACC 0589 \$299.**

1st Impression First Pack

Includes 70 "Classic" covers of five spine sizes packed in a reusable storage container. **ACC 0590 \$79.**

MacWAREHOUSE

1-800-255-6227

To access our on-line store, select "JUMP" from the menu and type "MacWarehouse."

ProModem Ultima

Only 14,400 bps modem with Fax! Supports the new V.32bis standard for 14,400 transmissions plus V.42bis/MNP-5 compression and error correction. Also, a 9600 bps Send/Receive Fax with feature-filled Maxfax software. Includes MacKNOWLEDGE software and cable. **MOD 0064 \$699.**

Metro ImageBase Electronic Clip Art

Communicate more effectively with fabulous art and graphics from the world's largest publisher of clip art. Each of the 18 ImageBase packages contains at least 100 topic-related images drawn by professional artists. **GRA 0169 \$85.**

Nisus 3.05

Search and replace by font, size, and style across all active windows. Complete page formatting including multiple columns along a WYSIWYG page view. Graphics capabilities and drawing tools add visuals to WP presentations. Includes 10 editable clipboards, glossary indexing, table of contents generator, spell checker and a thesaurus. **WRD 0029 \$245.**

Adobe Streamline 2.0 (Adobe)

Streamlines the art production process. Automatically convert a bitmapped or grayscale file into line art up to 90% smaller than the original. Save the converted image as an Encapsulated Postscript file and place the art into your page layout or enhance or manipulate the image in Adobe Illustrator or another drawing package. New features allow you to convert grayscale images, like photographs, into posterized line art. A Separate Shapes option allows you to easily edit individual shapes in your drawing application. Will even straighten out the lines when converting forms or technical illustrations that have been scanned in at an angle and much more. **GRA 0125 \$129.**

Flash (Beagle Brothers)

Want to get your files across the network in a flash? Beagle Brother's Flash is a fun file transfer utility for anyone on an AppleTalk network. Forget dedicated file servers - Flash moves across your network quickly, easily, and reliably. Flash is simple to use - just drop files into folders. And because it works in the background, you can work while Flash transfers your files. You can even chat with other users in real time! **NET 0060 \$129.**

TelePort, the ADB Modem (Global Village Communication)

The perfect choice for powerful yet compact Mac communication. This 2400 baud modem with MNP5 data compression packs Hayes compatibility and error-free communication. TelePort plugs into your mouse (ADB) port and provides a pass-through connector for other devices. It uses no external power supply, and leaves your serial port free for other uses! **MOD 0049 \$145.**

Also, TelePortFAX includes SendFAX 9600 baud modem software. Hold OPTION as you drag FILE-PRINT to easily send FAXes worldwide. **MOD 0058 \$189.**

SAT Complete (Queue)

Helps college-bound high school and prep school students learn how to take the College Entrance Examination Board's Scholastic Aptitude Test (SAT). No need to tremble before the dreaded exam, when you can learn about it in advance. The tutorial section takes a student step-by-step through each problem, highlighting a path to the right answer. The Pre-test simulates the actual test scored on the standard 800-point scale. The actual exam is a customized instruction based on the results of the student's Pre-test. Covers both the Math and Verbal sections. **EDU0161 \$29.**

Studio/8 2.0 (Electronic Arts)

The Eddy Award Winning professional graphics program Studio/8 introduces new version 2.0. In addition to all the power of Studio/8, new features include Pantone matching system support, new palette control features, PostScript printing, supports PICT, TIFF, LZW compressed TIFF and ILBM. Designed for the new Macintosh color computers. **GRA 0106 \$189.**

Studio/32

True color 32-bit technology makes Studio/32 the design tool for art creation allowing focus on artwork rather than the computer. Perfect for producing detailed comps, transparencies, and proofs. Achieve precise colors with Pantone matching system, CMY, HSV and RGB color models. **GRA 0231 \$449.**

WealthBuilder by Money Magazine (Reality Technology)

WealthBuilder uses your financial data and your decisions about goals and acceptable risks to calculate the best investment strategy. It reads data directly from both: Quicken and Andrew Tobias' Managing Your Money. It has a stock tracking and portfolio management system, and now includes 5000 stocks and 5000 bonds from Standard & Poor's, in addition to 1450 mutual funds. **FIN 0068 \$99.**

CompuServe

You can now contact MacWAREHOUSE or place orders with us in the **Electronic Mall** on CompuServe. The **MacWAREHOUSE GO** code is **GO MW**. As always, you'll get fast, dependable overnight service and you can leave messages for Kerry or any of our support staff.

Effects Specialist (Postcraft)

Transforms any font in your system into sparkling headlines or logos. Just type in a word or two and click the mouse to create instant typographical art! Features include WYSIWYG, color, kerning, a complete background generator and more! 120 effects range from subtly elegant to ultra flamboyant. Imports and exports as PICT or EPSF. Use with your favorite desktop publishing, graphics, or multimedia software. Prints to virtually any printer! **DTP 0062 \$115.**

KEEPING CURRENT

Keep your Mac up-to-date with the

AH, TECHNOLOGY—HOW IT MARCHES. Should all the talk about new Macintoshes and System 7.0 leave you feeling slightly trod upon, don't despair. No matter which Mac you own, there are upgrade options available that let you move to a higher class of performance. ■ **Deciding to upgrade is easy; figuring out how to upgrade isn't.** If anything, that process is even more complicated now, thanks to Apple's introduction of the Mac Classic, LC, and IIsi. Not only can you choose from traditional approaches to upgrading—system upgrades, memory, and accelerators—but you also must consider if the best upgrade might be just to buy another Mac. To give you a better idea of the options, I'll discuss three types of upgrades for Macs from the Plus up: system upgrades, memory upgrades, and accelerators. ■ **SYSTEM-WISE** A system upgrade gives a Mac new capabilities—whether the upgrade be a floppy drive, a SCSI port, color support, or a logic board. And depending on the features offered, system upgrades range widely in price and complexity. The most important thing

by Brita Meng

latest in upgrades

to do before buying a system upgrade is to make sure that your Mac can support the features the upgrade offers.

Quite often, compatibility depends on whether the Mac has the appropriate read-only memory (ROM) chips for the upgrade. Sitting there on a Mac logic board, ROM chips look pretty nondescript. But don't be fooled—they contain information necessary for a Mac to function.

Different Macs use different ROMs. For example, all Mac ROMs include QuickDraw—the routines a Mac uses to display information on screen. But only Mac LC, IIsi, IIfx, and IIfx ROMs have 32-bit Color QuickDraw built in. To make things even more confusing, even if different Macs have the same size ROMs, it doesn't mean the ROMs are identical. And sometimes the same Mac model can even have two different versions of ROMs. (The first Mac II ROMs had problems recognizing add-in memory boards.)

ROMs also determine what kind of floppy drive you can install in a Mac, and whether the Mac can access a SCSI device. To use an 800K floppy drive or an external hard drive, a Mac must have at least 128K ROMs (the Mac Plus ROMs). Similarly, the ROMs in the Plus, II, and some SEs don't support an internal SuperDrive.

Mac SE and II owners can upgrade to a SuperDrive by purchasing an FDHD upgrade kit from Apple. The kit includes an internal SuperDrive as well as the ROMs required to recognize it. If you own a Plus, or if you want an external drive for your SE or II, you can opt for a floppy drive from PLI or Kennect Technology. Both companies offer external high-capacity 1.4MB floppy drives with capabilities similar to those of the SuperDrive.

ROMs can also limit the type and amount of RAM a Mac can use to run applications. Because some ROMs run only in *24-bit mode*, they can't take advantage of all the RAM that you can install in a 32-bit, 68030-based Mac. In addition, the ROMs in a Mac determine whether you can take advantage of System 7's virtual memory feature (see "Coping with Virtual Memory").

Logically Speaking

If you want to upgrade more than just a floppy drive, you should consider an Apple logic board upgrade. With Apple's logic board upgrades, you swap the current main logic board in a Mac for a totally new one, thus giving the Mac a complete personality change. Four Macs can take advantage of these upgrades—the SE, the IIfx, the II, and the IIfx.

Apple's Macintosh SE/30 Logic Board Upgrade (\$1699) replaces the main logic board of

COPING WITH VIRTUAL MEMORY

Virtual memory allows the Mac to treat part of a hard drive as RAM. Previously, it was thought that all you needed to take advantage of the virtual memory in System 7 was either a 68020 microprocessor and 68851 Paged Memory Management Unit (PMMU), or a 68030 microprocessor. But that's not necessarily so. Because of Apple's implementation, System 7 requires firmware routines that are not present in the ROMs of 68000-based machines and cannot be added with a software patch. As a result, Mac Plus, SE, Classic, and Portable computers that have been upgraded with 68030 accelerator boards can run System 7, but can't use virtual memory. It's possible that some accelerators could be modified to run virtual memory, but that's the responsibility of the board vendor, not Apple.

Connectix Corporation, developer of the Virtual utility, says it will update Virtual for compatibility with System 7. Until then, however, if you own a 68000-based Mac, and you must have virtual memory, you're better off sticking to System 6 and running Virtual.

If your Mac supports virtual memory, and you intend to use it, plan to have at least 4MB of RAM. Although System 7 runs on 2MB systems, using virtual memory on a 2MB system degrades performance significantly. The Mac must go to the hard drive—a process called *paging*—to retrieve information that's typically in RAM. Because a hard drive has a slower access time than RAM does, paging isn't efficient and it reduces performance.

LC	II	IIx	IIcx	IIsi	IIci	IIfx	Portable
16MHz 68020	16MHz 68020	16MHz 68030	16MHz 68030	20MHz 68030	25MHz 68030	40MHz 68030	16MHz 68000

¹ Socket included for 68851 PMMU. ² SEs built before 9/89 have 800K internal floppy drive. ³ Requires expansion board.

an SE with that of an SE/30. If you have an SE with a SuperDrive (that includes those that have been upgraded with a Macintosh SE FDHD Upgrade Kit), you end up with the exact equivalent of a stock SE/30.

The Macintosh IIci Logic Board Upgrade turns a Mac IIx into a Mac IIci. With the IIci, you get on-board video, a faster CPU, a cache board connection, and ROMs that include Color QuickDraw and support for 32-bit memory addressing. But at \$2399, the upgrade isn't cheap; you should consider it only if you need 32-bit addressing or speed. If you opt for this upgrade, hang on to your now-spare video board: a NuBus add-in video board performs faster than the IIci's on-board video.

At \$2999, Apple's Macintosh IIfx Logic Board Upgrade for the Mac II and IIx is the best value. Install it and you end up with a top-of-the-line Mac. If you want a true IIfx, you also need to upgrade the II's 800K floppy drive with Apple's Macintosh II FDHD Upgrade Kit.

The advantage of an Apple logic board upgrade is that you get a true Mac. But there are disadvantages, too. First, Apple upgrades only exist for specific Mac models. Second, there may be hidden costs; for example, if you upgrade an SE to an SE/30 and want to add an expansion board, you have to buy an SE/30 adapter because the SE's expansion slot differs from the SE/30's. And third, Apple-label upgrades are expensive. Don't opt for an Apple upgrade without checking out third-party accelerators and CPU upgrades. You may find that such upgrades offer performance improvements identical to or even better than the improvements you'll get from Apple upgrades.

Coprocessor Considerations

Depending on the Mac, you may be able to improve or enhance its performance by adding a coprocessor. Floating-point units (FPUs) such as the 68881 and 68882 are coprocessors specially designed to speed math calculations. The 68882, which comes standard with the Mac IIx, IIcx, IIci, IIfx, and SE/30 is software- and hardware-compatible with the 68881 that shipped with the original Mac II. However, the 68882 is one and a half to two times faster than the 68881.

If you have a Mac II, you might consider upgrading the 68881 to gain performance. Just swap the 68881 on the Mac II logic board for the 68882. Neither the IIsi nor the Mac LC offers a coprocessor socket on the main logic board. You can add a coprocessor to the IIsi either by installing an accelerator or by installing an adapter board such as Apple's Macintosh IIsi 030 Direct Slot Adapter Card. That board provides not only a connector for an 030 Direct Slot add-in board but also a 68882 FPU. PSI Integration's Bus Adapter Card for the IIsi offers an FPU socket and a cache board slot. LC owners can take advantage of accelerators or third-party boards to add FPUs too. Ethernet add-in boards from Dayna Communications

Apple's Macintosh IIfx Logic Board Upgrade for the Mac II and IIx is the best value

and Asante Technologies include FPU sockets. MacProducts also sells a 16MHz 68882 FPU specially designed to fit in the LC.

The 68851 Paged Memory Management Unit (PMMU) is another type of coprocessor. When the PMMU is installed, a 68020-based Mac—like the Mac II—can take advantage of virtual memory. The Mac II logic board has an

empty socket where you plug in the 68851. The LC, which is also 68020-based, has no such socket.

Macs based on the 68030 do not require a separate PMMU because the 68851 circuitry is built into the 68030. And if you're lucky enough to get your hands on a 68040-based accelerator, you don't even need to worry about the FPU. The 68040 has both 68851 PMMU and 68882 FPU circuitry built in.

Of Accelerators and Speed

A Mac that needs an overall performance boost is the perfect candidate for an accelerator or CPU upgrade. Most accelerators work with the Plus, SE, II, and IIfx. Because the accelerators clip on the CPU socket on the Mac's main logic board, you should make sure that the accelerator is securely installed. Should it become unseated, it may short out the main logic board. Environmental conditions—high internal temperatures, humidity, and pollution—can also cause corrosion in the contacts between the clip-on upgrade and the CPU. To prevent problems, you should have a dealer solder the upgrade to the CPU. It's not pretty and it's permanent, but at least the accelerator won't come loose.

Processors currently available on accelerators range from a 16MHz 68000 to a 25MHz 68040. A 68040-based accelerator offers better performance, but it's also much more expensive. For example, Brainstorm Products' Brainstorm Accelerator—which uses a 16MHz 68000—costs \$249. The 68040-based accelerators range around \$3000.

Whenever you buy an accelerator, you should ask about compatibility with other Mac enhancements. This is especially important in Macs where space is at a premium—the Plus, SE, and Classic. Also keep in mind that accelerators that use the same CPU don't necessarily offer identical performance gains. Besides processor speed, other factors that affect performance include the presence of on-board memory or cache memory. For more information on 68030 accelerators, see "The Accelerated Course," in this issue.

Another way to squeeze performance from a Mac without squeezing your wallet is to add a cache board. According to our tests, a cache board for the IIfx can improve performance by 27 percent (see "The Accelerated Course"). Most cache boards work with the IIfx, which has a specially designed slot for them. However, Dove Computer's MarATHon Racer and Orchid Technology's MacSprint II work on the II. Even IIsi owners can get into the act with PSI Integration's Bus Adapter Card, which has a cache board option.

MEMORY CONFIGURATIONS

SIMMple Pleasures

A memory upgrade is the cheapest way to enhance Mac performance, especially if you're tired of getting dialog boxes saying "Out of Memory" or "Application Unexpectedly Quit." As always, the upgrade options available depend on the Mac you own. In addition, the upgrade you buy may affect your upgrade options in the future.

Most Macs use what's called a Single In-line Memory Module, or SIMM, for memory expansion. A SIMM is actually a small circuit board with dynamic random-access memory (DRAM) chips soldered to it. The exceptions are the Mac 128K, 512K, and 512KE, which have memory chips soldered to the main logic board, and the Mac Portable, which requires special low-power memory called static random-access memory (SRAM). The Classic, LC, and IIsi have memory soldered to the main logic board, but you still use SIMMs to add memory.

The type of chips on a SIMM determines SIMM capacity. There are 256-kilobit chips on a 256K SIMM, 1-megabit chips on a 1MB SIMM, and so on. Currently, five types of SIMMs are available—256K, 1MB, 2MB, 4MB, and 16MB.

You may see a SIMM's size expressed as a particular capacity followed by an *x* and a number. That number indicates how many chips there are on the SIMM module. For example, "1MB \times 8" means there are eight 1Mbit chips on the SIMM. Other SIMMs may have only two RAM chips. If you spot these SIMMs, don't panic. The Mac accesses RAM data 8 bits at a time, or in *bytes*. Because each of those RAM chips contains 4 bits of each byte, instead of just 1 bit, only 2 chips are necessary. The bottom line is that you shouldn't worry about how many chips are on a SIMM.

You may have also heard about *parity* SIMMs. Common in the IBM PC market, parity SIMMs contain an extra parity chip for error checking and correction. Only the IIfx and IIfx have the parity-checking capability to take advantage of such SIMMs. You can use parity SIMMs in other Macs, but because they're more expensive, you might as well buy regular SIMMs.

The speed of the chips also determines how fast the Mac's CPU can retrieve information from memory. The lower the SIMM speed number, the faster the SIMM is. And the faster the CPU is, the

faster SIMM it needs. You can usually determine the SIMM speed by looking at the chips on the SIMM. You'll see a part number, a dash, and then more numbers. Multiply the numbers after the dash by 10 to get the speed. For ex-

● = yes; ○ = no. ¹ Requires Macintosh Plus Disk Drive Kit. Note: The only upgrades available for the Portable are memory and SuperDrives from Apple, Kennect, and PLI.

A memory upgrade is the cheapest way to enhance Macintosh performance

ample, if an 8 follows the dash, then you've got an 80-nanosecond SIMM.

As long as your SIMMs are equal to or faster than the recommended speed for your Mac, they'll work fine (see "Memory Configurations"). There's no problem with installing SIMMs that are faster than the Mac needs; in fact, most companies currently sell only 100ns and 80ns SIMMs. If you put 80ns SIMMs in a Mac SE, the SE continues to access memory at 150ns, even if the SIMMs can go faster.

SIMMs come in different *profiles*, or heights, due to the type of RAM chip soldered to the module. Low-profile SIMMs use surface-mount chips; the leads of the chip are soldered directly to the board. High-profile SIMMs use Dual In-line Package (DIP) chips; the leads are soldered into holes on the SIMM board.

Make sure to buy low-profile SIMMs. Because of their height, high-profile SIMMs may interfere with future expansion. For example, high-profile SIMMs may block the expansion slot in an SE. In a Mac II or IIfx, they may prevent you from adding a full-height hard drive. High-profile SIMMs may also block the air circulation around the main Mac logic board, causing heat problems in Macs without internal fans. (For a complete list of memory vendors, see *Where to Buy*, under Memory Upgrades.)

SIMM Tips

Although all Macs can accommodate 1MB SIMMs, whether you can use other SIMM sizes depends on your Mac. Only the LC and IIsi can use the newer 2MB SIMMs. The smallest SIMM that can be used in a IIfx is a 1MB SIMM. And you cannot use 4MB SIMMs in a Plus, SE, or Classic (for more information on SIMM configurations see "Memory Configurations").

Getting the Mac II and IIfx to use 4MB SIMMs is a bit complicated. The original Mac II ROMs cannot recognize 4MB SIMMs; if you install them, the Mac crashes during start-up. The solution to this problem is to upgrade the ROMs using Apple's Macintosh II FDHD Upgrade Kit. But that's not all: for 4MB SIMMs to work in a IIfx and an upgraded II, an extra programmable array logic (PAL) chip is necessary on each SIMM board. So before you buy 4MB SIMMs for a II or IIfx, make sure to ask the memory vendor if the SIMMs are compatible.

With a Plus, SE, or LC, you must upgrade SIMMs two at a time. That's because the CPUs in those machines have a *16-bit data path*; in other words, they access memory 16 bits at a time. (Remember, each SIMM provides only 8 bits, or 1 byte, of data.) All the other Macs—except the Classic—require that you upgrade SIMMs four at a time, because they have a 32-bit data path. The Classic has no SIMM sockets

FOR 128K, 512K, AND 512KE MAC OWNERS

No doubt about it, Mac 128K, 512K, and 512KE computers are the most affected by Apple's introduction of the Mac Classic, LC, and IIsi. Before, the best strategy for upgrading a compact Mac was to turn it into a Mac Plus, via either Apple's Macintosh Plus Logic Board Upgrade or an equivalent third-party upgrade. Nowadays, however, such upgrades may cost more than buying a new Mac.

For instance, to bring a Mac 512K up to Plus level using Apple's upgrade path, you spend nearly \$900. Upgrading a Mac 128K costs a whopping \$1098—that's more than the price of a Mac Classic. The outlook is brighter for 512KE Macs because those computers already have 128K ROMs. As a result, they cost less to upgrade to Plus levels.

If you can't bear to part with your compact Mac—or can't afford to—your best option is to buy a third-party upgrade from companies such as Computer Care, MacProducts USA, Peripheral Outlet, or Total Systems (see "Compact Mac Upgrades"). Such upgrades either bring the Mac to Plus levels for less or provide functionality beyond the Plus. For example, Peripheral Outlet offers a 128K-to-Plus equivalent for \$695 and a 512K-to-Plus equivalent for \$625. Computer Care's MacRescue Video board provides six SIMM sockets, a SCSI port, and a large-screen video interface for a 512KE. And the Gemini series of upgrades from Total Systems allows you to upgrade the CPU in those Macs to a 68030, same as in the SE/30 and IIsi.

on its main logic board; you add memory with a special memory-expansion board.

One way to reuse old SIMMs is with a memory-carrier board. These boards, available from vendors such as Computer Care and Cyclone Sales & Engineering, have their own SIMM sockets—much like the Classic memory-expansion boards. Put, say, four 256K SIMMs into the carrier board, then plug the carrier board into a SIMM socket in the Mac. The Mac then sees the carrier board as a 1MB SIMM. Because a carrier board is physically larger than a normal SIMM, however, you should make sure before buying one that it won't interfere with an internal hard drive or add-in boards.

If installing SIMMs was all you needed to do in order to use gobs of memory in a Mac, that would be great. But alas, it's not so. Technically, all 68030-based Macs and the Mac LC should be able to see 128MB of RAM with 16MB SIMMs installed. (The design of the Plus, SE, and Classic restricts these machines to no more than 4MB; the Portable tops out at 9MB.) But if you're running System 6.0.X, those Macs can generally only use a maximum 8MB of physical SIMM memory.

There are three ways to rid the Mac of that 8MB cap. The first is to use System 7, a 32-bit operating system. However, to take advantage of System 7's 32-bit capabilities, the Mac must also have 32-bit ROMs. Macs that satisfy this requirement—and can thus use System 7's 32-bit addressing option—include the IICI, IIfx, LC, and IIsi. Although the SE/30, II, IIX, and IICx have 32-bit processors, their ROMs do not support 32-bit addressing. The ROMs in the Plus, Classic, SE, and Portable are a moot point, since those Macs are limited by 68000 CPUs.

The second and third options don't require a system software upgrade, but do require some hardware. If you have a Mac SE/30, II (with 68851 PMMU), IIX, IICx, or IICI, you can use Connectix's Maxima software utility to rid them of the 8MB limit. Maxima—which runs under System 6.0.X—allows the Mac to recognize up to 14MB of RAM. Any other physical RAM beyond that becomes a RAM disk (a portion of memory that acts like a hard drive).

Two other utilities from Connectix, Optima/32 and Optima/128, allow owners of Macs with 32-bit clean ROMs to take advantage of even more memory under System 6.0.X. On Macs with enough physical memory, Optima/32 creates up to 32MB of application memory; Optima/128 allows you to use up to 128MB of RAM for running applications. Beware, however: the applications you run under Optima must—like the ROMs—be 32-bit clean.

Think Long Term

An upgrade is a long-term investment in a Mac. And you should take the same care in buying any upgrade that you did when you bought the Mac. Don't buy strictly on price—especially as far as SIMMs are concerned. Talk to other users to find out more about products. Check the vendor's reputation, support, and warranty.

Once you decide on an upgrade, there are installation issues to consider. Be aware that installing any upgrade yourself voids the Apple warranty. In addition, installing some upgrades yourself may void their warranties. So despite people telling you that installation is a piece of cake, if you're slightly nervous or unsure, don't do it yourself. Most upgrade vendors can give you names of dealers or certified installers in your area; often, the vendors will install the upgrade for a small fee.

No Mac is a dead end. With the right upgrade, you'll be better able to keep pace with the march of technology. ■

Don't buy an upgrade strictly on price—especially as far as SIMMs are concerned

THE HIGH & MIGHTY

**MACWORLD LAB TESTS 66 LARGE-CAPACITY HARD DRIVES
TO HELP YOU CHOOSE THE RIGHT ONE**

Like the good Boy Scout I never was, I believe in planning ahead and being prepared. Thus, about two years ago, I purchased a 300MB hard drive, despite the fact that my files could little more than half fill an 80MB drive at the time. For quite a while, files and folders floated effortlessly within a universe of empty disk space; I smiled each time I saw the "250,000K available" message in the corner of the disk drive window. ■ Today, of course, I no longer have the same smug smile on my face. My hard drive is nearly full; the time has come to purchase another high-capacity hard drive. But my, how times have changed.

Two years ago, there were only a handful of drives to choose from, drives in excess of 300MB were especially rare, almost all large-capacity drives were big and clunky, and prices were, well, up there. Today, however, you can pick from more than 100 hard drives ranging from 300MB to over 2 gigabytes. Some are almost as small as a Walkman tape player. And prices, though still considerable, are not nearly so painful. ■ To help you choose from such an embarrassment of riches, we review high-capacity external hard drives 300MB and larger on the following pages. Macworld Lab analyzed 66 such hard drives for speed and noise, while I looked at a number of other important fea-

BY ROBERT C. ECKHARDT

tures for these and other qualifying drives. Apart from the ever-increasing number of drives and their still-decreasing prices, the highlights of this year's roundup include better Macintosh compatibility and a record-low failure rate (only 1 percent of drives received were dead on arrival, compared with 4 percent last year). We identified a number of favorites, too, but I'm getting ahead of myself.

Shop Talk

Generally speaking, I prefer to think of a piece of electronic equipment as a black box—what matters is whether it performs as it is supposed to. But because the company you purchase a drive from does not make the drive mechanism itself, and because the drive mechanism is the single most important part of the package, hard drives are an important exception to my black box rule.

A hard drive is nothing more than a drive mechanism and a bunch of other, largely lesser stuff. The drive mechanism comprises two parts: a stack of spinning platters with a series of nervous read-write heads sandwiched in between, all sealed in a metal box; and a circuit board

specially designed to transfer data between the read-write heads and the drive's SCSI port. The hard drive vendor surrounds the mechanism with a power supply, perhaps a fan, a few dials and switches, some wires, one or two blinking lights, and a box with a pair of SCSI connectors. Not surprisingly, then, it is the mechanism that by and large determines a drive's most important characteristics—capacity and speed—although the software supplied

about 75 percent of all high-capacity drives contain Seagate mechanisms. Most vendors use only one mechanism for a given hard drive model; a few, such as Microtech International and Rodime Systems, may use different drive mechanisms at different times. The mechanisms used in the drives we tested are listed in both hard drive speed tests.

As for drives other than the ones we tested, occasionally the name Imprimis (a subdivision of Control Data Corporation purchased by Seagate in 1989) or Wren (one of Seagate's several product lines) appears in a hard drive's model name, indicating that the mechanism inside is from Seagate. Model name suffixes such as I (for Imprimis) and WD (for Western Digital) occasionally appear as well. Otherwise, overt clues to a drive mechanism's make and model are rare. Most hard drive vendors will tell you if you ask, however (or you can use the utility SCSI Evaluator, as we did); of the vendors that submitted drives for testing, for example, only Optima refused to disclose the sources of its drive mechanisms.

Is Bigger Really Better?

The first consideration in any hard drive purchase is capacity. A good rule of thumb is to buy a drive large enough to fulfill your needs for the next year or two. Don't go hog-wild and buy the largest drive available (unless you really need the capacity), thinking it will last until you retire. Hard drives do wear out, and more important, the additional capacity you'll need in two years' time should be much less expensive than it is now.

If you're a mere mortal who has outgrown a 40MB or 80MB hard drive faster than expected, you should find drives in either the 330MB or 410MB ranges more than adequate. Graphic artists, desktop publishers, multimedia types, and others who work with large numbers of large files will probably be more comfortable with drives in at least the 600MB range. If you're a network manager, you should probably consider drives with 660MB and above.

Although it's common practice to infer a drive's capacity from its model number, this is not an accurate way to size up a drive. True, the model number and the formatted capacity are often close, and in many instances the difference between the two is a matter of only a few percent. Sometimes the discrepancy is in your favor, as with the La Cie ZFP+ 640MB, which formats to 645.7MB; sometimes it's not, as with the La Cie ZFP+ 600MB, which formats to 584.7MB. Occasionally, however, the formatted capacity is significantly different from what you would expect. DJK Development's MS-410, for example, formats to 345.8MB.

Recommended 600MB drives include the MacProducts USA MagicDrive 600, the Ehman 660MB F/H Wren Runner, the PLI PL635 Turbo, and the HDI PowerDrive 600L.

ROBIN GINSBERG

by the vendor can affect both of these attributes to a degree.

The 25 vendors whose drives we tested purchase their mechanisms from 8 sources: Fujitsu, Hitachi, Hewlett-Packard, Maxtor, Micropolis, Quantum, Seagate, and Western Digital (which, in turn, buys some of its drive mechanisms from IBM). By far the most popular source is Seagate;

To determine ranking, we indexed overall performance numbers against the fastest drive, the MicroNet SB-1300NP.

SCSI—The Harder Part of Hardware

All large-capacity drives for the Macintosh are SCSI devices, which attach—via a (usually very short) SCSI cable supplied with the drive—to the Mac's SCSI connector. The SCSI connectors on the drives themselves (there are two, so you can create a chain of SCSI devices) are either 25-pin (as on the Macintosh) or 50-pin. In keeping with other SCSI peripherals, such as scanners and CD ROM drives, most disk drives use 50-pin connectors. A few, including Liberty Systems' Liberty Stealth 425Q, the La Cie ZFP line, and Procom's MD320 and MD420, have 25-pin connectors. I prefer drives with 50-pin connectors; if a drive with 25-pin connectors is part of a SCSI chain, cabling is more confusing and usually requires the purchase of additional 25-to-25-pin or 25-to-50-pin cables.

Two other facts of SCSI life are termination and SCSI ID numbers. Termination refers to the need for a special resistor, called a terminator, at both the beginning and the end of a SCSI chain. In many drives the resistor is built into the internal electronics; such drives are said to be internally terminated. Internal termination can sometimes be removed by the user—with varying degrees of effort—but more often it requires the skilled hands of a technician. In many other drives, a separate terminator plug—which you attach when necessary to one of the drive's SCSI connectors—comes with the drive. The PLI drives and the Procom MD320 and MD420 allow you to turn internal termination on and off with a switch, which is a pretty convenient way to work with internally terminated drives (see "Hard Drives Compared").

If there are two or more SCSI peripherals connected to a Macintosh, SCSI rules dictate that an internally terminated drive can be attached

At the Quantum disk drive manufacturing facility in Milpitas, California, precision manufacturing in a clean-room environment is required to assemble hard drive mechanisms, visible in the lower right of the photo.

only at the beginning or end of the chain. If your Macintosh has an internal hard drive, an internally terminated drive can be attached only at the end of the chain. Since setting up a problem-free SCSI chain often requires changing the order of the devices in the chain, the position limitations of an internally terminated drive can be a real pain in the neck. Internal termination is also a problem with the Mac IIx, which requires a special type of terminator. Internal termination is thus the least desirable of the three alternatives; avoid it whenever possible. External and switchable termination are equally acceptable; a

switch is a bit more convenient, since there's no terminator plug to lose.

In addition to proper termination, every peripheral on a SCSI chain must have an ID number from 0 to 6 (the Macintosh itself is always 7), and no two peripherals can have the same number. You can set the SCSI ID number with a thumb switch or a rotary dial, a DIP switch,

jumpers (metal prongs that are either capped with a plastic sleeve or uncapped), or through software. Switches are the most convenient, and fortunately they are found on most of the large-capacity drives reviewed here. You can override the SCSI ID setting with the utility software provided in some drives, including those from Cranel and MacProducts, but the confusion this

can cause to the unknowing or forgetful is probably more hassle than it's worth.

Driving the Speed Limit

One of the great joys of large-capacity hard drives is that they're so much faster than their smaller relatives. The speed of a drive can be objectively measured in a variety of ways (see "Hard Drive Speed Tests 300MB-950MB" and "Hard Drive Speed Tests 1GB and Up"). Data-transfer rates, which Macworld Lab measured with the test program SCSI Evaluator, indicate the speed with which data can be written to or read from the drive.

Since both seek time and transfer rates assume ideal conditions rarely seen in the real world, Macworld Lab also conducted a number of tests involving the opening, saving, and duplicating of large and small files and the compiling of computer code (which requires both reading and writing of data). The real-world test results are combined with the other two measures to produce an overall speed index for each drive. For convenience, we divided the tested drives into two large groups—drives between 300MB and 950MB and drives 1GB and up—and calculated the various indexes for the two separately. (For technical reasons, seek times were not available for drives 1GB and up.)

The speed of all the drives we tested is so great that they can easily outrun the ability of a Macintosh Plus to process the incoming information. With the exception of EMac's Metro drives (which use Maxtor XT mechanisms) and PLI's PL320 WD Turbo (which is the only tested drive that uses a Western Digital mechanism), all tested drives can also outrun a Macintosh SE or a Classic. Although few Plus and SE owners are likely to want drives above 300MB, those who do can assume that all but the three mentioned above will perform faster than the SCSI-transfer speeds such Macs allow.

When used with members of the Macintosh II family, on the other hand, not all large-capacity drives are equally fleet-footed. Among drives smaller than 950MB, the consistently fastest drives are those in the 650MB range based on the Seagate ST4767 mechanism, those in the 330MB range based on the half-height Seagate ST2373 mechanism, those in the 600MB range based on the Seagate ST4702 mechanism, and all the drives in the 410MB range (based on either the Seagate ST2502 or the Quantum PD425S).

At the bottom of the speed scale—joining the especially slow EMac Metros and the PLI PL320 WD Turbo—are a number of drives in the 330MB range, including those based on Seagate ST4350, ST4376, and ST4385 mechanisms and several Micropolis mechanisms. Aside from the EMac Metro 670, the few drives over 400MB that we

Quietest drive

Less than twice as loud as quietest drive

More than twice as loud as quietest drive

Drives are ranked here from quietest to loudest by their decibel level during normal operation. A decibel is a measurement of sound pressure, which is what the human ear responds to. The minimum change in sound that the human ear can detect is 3 dB. Because decibels are a logarithmic unit of measurement, if a sound increases by 10 dB, it sounds approximately twice as loud as it did before.

Each person has a different tolerance for background noise. To give you some idea of how these drives would fit into normal operating environments, a quiet bedroom has an average decibel level of 25 dB; a living room, 40 dB; and an average office, 65 dB. We found that drives measuring about 48 dB were noisy enough to be an irritation in our office environment.

found to be noticeably slow were Mirror Technologies' M595, Rodime's Cobra 650e, MacLand's Imprimis 600, Storage Dimensions' MacinStor 650-S1, and La Cie's ZFP+ 600MB. As for 1GB-and-up drives, the majority are 1010MB drives based on a Seagate ST41200 mechanism. Since drives based on other mechanisms perform as well or better, there are no poor performers in this size range.

In overall performance ratings for both groups, two vendors in particular stand out. One is MicroNet, whose NuPort drives turn in outstanding performances (see "Giving SCSI the Runaround"). The other is FWB, whose hammer drives are always expensive and almost always exceedingly fast. The hammer600FMF, for example, is right behind the top-rated MicroNet SB-644NP; the hammer300 and 300FMF share the top spot in the 330MB range with the MicroNet SB-303NP; and the hammer1000 is hot on the heels of the two MicroNet drives at the top of the 1GB group.

Smaller Than a Bread Box

With one exception (Liberty Systems' Liberty Stealth 425Q, which is black), the large-capacity hard drives are housed in platinum-color metal

or plastic boxes. (Unless you tap the case with your finger, metal and plastic boxes are more or less indistinguishable from each other.) In general, the hard drive housings come in one of three standard shapes. The most common shape, known as the zero footprint design because it doesn't take up desktop space, lies flat and measures about 10 inches square. The one major variable in this design is

height, which varies from a sleek 2 1/4-inch-high pizza box (in the APS 425 and FWB's hammer300, for example) to a stately 5-inch-high hat box (in CMS's Platinum line). Sleek or stately, these drives tuck neatly beneath a compact Mac or atop a IIx or IIcx.

The shoe box design is taller, narrower, and longer than the zero footprint case. Some shoe box cases (as in Storage Dimensions' MacinStor drives) are slightly less than 6 inches high and fit inconspicuously beside a Mac II. Others, like the APS 330 Runner and MicroNet's SB-303NP and SB-330 (despite their relatively small capacity), are an inch or two taller and don't seem to fit anywhere very conveniently.

Finally, there's the small-and-thin design, available in flat or upright orientations. The flat version looks like an oversize modem. The upright version (such as Liberty's exceptionally small Stealth 425Q) sits like a book balanced on its spine; although it requires very little desk space, the ease with which it can be tipped over makes me nervous. Whichever drive you choose, make sure its size and shape match the place you want to put it. A few drives (including those from EMac and Optima Technology) have movable feet that give you two orientations (flat and upright) for the price of one; like the Liberty Stealth 425-Q, however, most of these drives seem too tipsy when placed upright.

Few high-capacity drives are likely to win any beauty contests. By far the ugliest are those in which the black metal faceplate of the drive mechanism lies exposed—IBM style—in the front of the case. (Offenders include drives from APS, Cranel, MacProducts, Mirror, and Relax.) The best-looking ones, those that best match the design of the Mac itself, include the drives from Cutting Edge, Ehman, FWB, GCC, Liberty, MicroNet, Rodime, and Storage Dimensions. But even if good looks don't interest you, beware of shoddy construction. A gap between the top of the faceplate and the top of the case in Relax's Vista 600 and MacProducts' MagicDrive 600 is not only unsightly, but also an obvious place for dust and dirt to enter. Another problem in some drives (including those from Cranel, Ehman, and Relax) is a poorly constructed back panel that bends when you attach or remove cables.

Most drives have two LED indicator lights, one for power and the other for drive activity; a few, including drives from CMS, Cranel, La Cie, and PLI, have an activity light only. In general, I recommend two-light models, since a power light is a useful reminder to turn off the drive at the end of the day. Almost all large-capacity drives contain universal power supplies that can automatically adjust to either 120- or 220-volt power (see "Hard Drives Compared"). External fuses are handy (they can save you a trip to the repair shop) and are standard equipment on about half of all large-capacity drives. Other conveniences are rare. Notable ones include the provision for an external power supply and a special termination power indicator on Optima drives, the extra power outlet on Rodime drives, and the se-

Recommended 300MB drives include the Mirror M325, the La Cie ZFP 320, and the FWB hammer300.

Hard Drive Speed Tests

300MB—950MB

Color Key

Fastest

Percent slower than fastest

Up to 10%

11%–20%

21%–29%

30% or more

The drives are listed from best overall performance (top) to worst overall performance (bottom), based on both application and SCSI Evaluator low-level tests. To determine the ranking, we indexed overall performance numbers against the fastest drive. Thus, the MicroNet SB-644NP gets a 1.00 and the slow EMac Metro 670 gets a .53. Index numbers are listed next to the product name.

On the application tests, we tested each drive's ability to duplicate a large (3.2MB) file and search a database for a specific record. We also averaged the drive's speeds for opening and saving files from several applications including PageMaker and Excel.

curity loop (for use with security cable kits) on GCC drives.

Software as well as Hardware

All the drives we tested are delivered formatted and ready to run. Some include the most current version of Macintosh system software; oth-

ers require that you provide your own. All units come with a utility program that enables you to reformat the drive and reinstall the driver (the software that enables the drive to work with a Macintosh), should that be necessary. Some vendors, such as Storage Dimensions, GCC, PLI, and Rodime, produce utilities that are tailored

specifically to their own drives and are, usually, easier to use. Other vendors include commercially available utilities such as Disk Manager Mac (HDI), Silverlining (La Cie), Disk Utility (Relax and MacDirect), and SCSI Director Professional (DJK).

Most utilities let you subdivide a drive into smaller pieces called partitions (see "Hard Drives Compared"). The Mac treats each partition as if it were a separate volume (drive)—a useful pretense, given the Finder's current limit of about 3000 files per volume. Most utilities enable you to password-protect individual partitions, and most let you format partitions in standard Macintosh, A/UX, and other formats. Most utilities also allow you to select the interleave factor (the way sectors are numbered on a hard drive) during formatting. Until recently, this would have been essential for optimum performance with a Mac Plus, SE, or Classic. Almost all large-capacity drives now have a little gadget called a read-ahead cache, however, which tosses interleave settings into the dustbin of unnecessary utility functions.

Some drives come bundled with familiar commercial utilities, such as MacTools Deluxe, SUM II, 911 Utilities, Gofer, Norton Utilities for the Macintosh, QuicKeys, and others. A few include well-known backup programs such as Redux and respected antivirus programs such as Virex. These are nice bonuses, but unless you must choose between two drives that are otherwise equal, they shouldn't be a deciding factor. On the other hand, software features that are rare or otherwise unavailable, such as the disk-mirroring function in Storage Dimensions' util-

ity program (which creates a duplicate copy of your data on another hard drive), may very well override most other concerns if the feature is important to you.

You Can Look It Up

Termination, SCSI ID, interleave, drivers, and other esoterica can easily befuddle a new hard drive owner. A good manual can help explain such mysteries; unfortunately, a good manual is hard to find. Some vendors, such as Cranel, MacLand, and Hard Drives International, provide either no manual at all or a manual that's not much better than none at all. Only a few—including Cutting Edge, Ehman, GCC, Optima, and Rodime—provide manuals that are complete, comprehensible, and well organized. If you're at all shaky concerning the ins and outs of hard drives, be sure to buy a drive with a good manual—or make friends with a power user in your local user group.

If you look it up in the manual and you still can't figure it out, it's useful to be able to call for help. All of the hard drive vendors offer technical support by phone, but only some of them offer a toll-free support line. Some vendors also operate or participate in an electronic bulletin board from which you can obtain answers to questions or download the most recent versions of driver or utility software. Vendors also differ in the length of their warranty (ranging from a stingy one year to a very generous five years), the availability of an optional extension, the time the company claims it takes to repair a broken drive, and whether data recovery is included in the repair.

Because I work in a quiet room at home, I also want to know how noisy a drive is. If you work in a quiet location, such as a library or an enclosed office, we recommend the drives our tests measured at 40dB or less (see "Noise Test"). If you work in a large, open office or have a Mac II system unit—and its whirring fan—sitting on your desk, drives rated at 48dB or less are not likely to have a noticeable effect on your sound environment. The drives rated at over 48dB can be heard in almost any work environment—except where typewriters are in constant use—and are not recommended.

The Final Tally

Last but not least is the question of how much all this new storage space is going to cost. In general, drives from APS, HDI, La Cie, MacLand, and Mirror tend to be the best bargains in each size range. On the opposite end of the scale, drives from Cutting Edge, FWB, MicroNet, Optima, PLI, and Rodime are usually the costliest, although street prices may, in some cases, be significantly lower than the suggested retail price.

All told, my ideal large-capacity drive would be small, fast, quiet, good looking, and inexpensive. It would have external termination, a switch or dial for changing the SCSI ID, two LEDs, a good manual, a two-year-or-longer warranty, and utility software that's full-featured and easy to use. None of the drives we tested fit those requirements perfectly, but many come close enough to win our admiration.

For the budget-minded willing to accept such inconveniences as internal termination, poor manuals, slightly slower speeds, and clunky cases, we recommend Mirror Technologies' M333 (\$1297), La Cie's ZFP 320 (\$1799) and ZFP 420 (\$1899), DJK Development's MS-410 (\$1899), HDI's PowerDrive 660MC (\$1899) and 1050I (\$2699), and MacLand's Imprimis 1.2GB (\$2999). On the opposite extreme, for those who want the best drive possible, regardless of cost, we recommend FWB's hammer300 (\$2999), 300FMF (\$3749), 600FMF (\$5399), and 1000 (\$5899); MicroNet's SB-303NP (\$3445), SB-644NP (\$5295), SB-1288/NP (\$9990), and SB-1300NP (\$7995); and Optima's Concorde 1050 (\$5995).

For the rest of us, those who must temper high ideals with financial restraint, we recommend Deltaic's Server 320H (\$2499) if you don't mind the high noise level, Optima's Diskovery 325 (\$2495), Storage Dimensions' MacinStor 325-S1 (\$2099), Liberty's Stealth 425Q (\$2299), GCC's UltraDrive 430S (\$2699), MacProducts' MagicDrive 600 (\$2350), Relax's Vista 600 (\$2619) and 660 - Runner (\$2349), Ehman's 660MB F/H Wren Runner (\$2489), La Cie's ZFP+ 1.2G (\$4599), and Storage Dimensions' MacinStor 1020-SI (\$5099).

GIVING SCSI THE RUNAROUND

Speed test results for MicroNet's NuPort drives are significantly better than those for almost all other drives we tested. One key to this remarkable record is that NuPort drives use superfast Seagate drive mechanisms. The other major factor is that the drives are connected to the Macintosh not through the SCSI port, as one would expect, but by means of a NuBus board supplied with the drive. By bypassing the SCSI port and its controller, the NuPort system can transfer data to the Macintosh as fast as the drive can dish it out, yielding dramatic increases in both data-transfer test results and real-world performance.

But MicroNet isn't the only vendor that recognizes the performance bottleneck created by the Macintosh SCSI controller. Storage Dimensions has announced its Data Cannon board in both NuBus and even faster PDS (processor direct slot) versions (the NuBus slot, too, can be a bottleneck for speedy transfers); they work on the same principle as the NuPort board and should be available in the spring. DayStar Digital's SCSI PowerCard, available now, is a NuBus board that combines a Mac SCSI controller bypass with special caching software and a 1MB, 4MB, or 16MB memory buffer.

Because they add a second SCSI port, all three boards double the number of SCSI devices you can chain to the Macintosh. The NuPort and Data Cannon boards can be purchased only with a new MicroNet or MacinStor drive, or as an upgrade. The NuPort board adds \$600 to the retail price of a MicroNet drive, while Storage Dimensions reports that a Data Cannon board will add \$870 to the retail price of its drives. DayStar's SCSI PowerCard is much more expensive (the retail price of the board alone, without any of the required cache memory, is \$1499), but it is available separately and thus can be paired with any drive. And unlike with the NuPort and Data Cannon boards, which can boost the performance of only the fastest drives, DayStar says that even habitually slow mass storage devices, such as optical and CD ROM drives, will show significant speed gains with a SCSI PowerCard.

On the whole, there are few drives that we recommend against buying. Specifically, we suggest you avoid the exceedingly slow EMac Metro 335 (\$2499) and 670 (\$3395). Also on our caution list are a few drives that, in our tests, refused to act as start-up drives: HDI's PowerDrive 320I (\$1449) and 600I (\$1799), and CMS Enhancements' Platinum Series PD 320 (\$3099). (If you have two or more hard drives, this may not cause you any difficulties.) Otherwise, I'm happy to report that the quality of large-capacity hard drives continues to go up, even as prices go down, and that's welcome news for anyone itching to enlarge their megabyte horizons. ■

See *Where to Buy* under Large-Capacity Hard Drives for contact information.

The long wait is over.

Time to make your move.

B Y L O N P O O L E

YOU'VE BEEN HEARING ABOUT

this famous System 7 for years—literally. Now it's finally here. The disks, the manuals, the box, and the shrink wrap are on your Apple dealer's shelf and can be yours for \$99. (You can buy a group upgrade kit for \$349; prices are subject to last-minute change.) Now that you can get this long-awaited upgrade to Macintosh system software, the question is, should you?

dorsement may surprise you. Anyway, making it surprised me. When I first started working with System 7, I expected to find that its new capabilities would make it overly complex for a typical Macintosh user—witness the vast majority of System 6 users who shun MultiFinder. But most of System 7's complexity remains hidden until

CONFESSIONS OF A SYSTEM 7 USER

Emphatically yes. Dollar for dollar, System 7 is the best enhancement you can add to the Mac—even if you have to add more memory to use it. The new Finder in System 7 is worth the cost alone. In addition, you get sharper text, built-in file sharing, and a whole lot more (see "System 7 Boiled Down"). Such a blanket en-

you seek it out. One exception is multitasking, which you may find disorienting if you aren't already accustomed to MultiFinder.

Not that it's all rosy. A few minor problems surfaced that I wouldn't have anticipated. For instance, even those accustomed to MultiFinder must learn new techniques for switch-

ing between programs. Everyone must learn new methods for editing icon names. And, there are surprises in store when you use directory dialog boxes to open and save files.

Some users might upgrade to System 7 and barely notice the difference, at least at first. In the following pages I describe the new capabilities as you will probably encounter them. (The descriptions are based on 7.0b4, a prerelease version, and it's possible that names and icon designs have changed somewhat since then.)

New Menus

The first clue to these new capabilities is in the System 7 menu bar. There are two new permanent menus at the right end of the bar: the Help menu and the Application menu.

The Help menu lets the Mac explain itself. A Show Balloons command in the menu turns on System 7's optional *balloon help* feature. When balloon help is turned on and you place the pointer over an object, a concise description of the object appears in a cartoon-style balloon. Aside from balloons appearing and disappearing, everything else works normally. You may perceive a slight delay as help balloons come and go, especially if you use a slower Macintosh.

Balloon help knows about all standard objects in the Macintosh interface. However, it cannot describe a specific program's menu commands, window contents, dialog boxes, and so forth. For that to happen, the program must be revised to include the necessary help balloons.

Multitasking

With System 7, multitasking is no longer optional, and even those familiar with MultiFinder may need balloon help and their wits about them to get used to the new environment.

Just as with MultiFinder, the Finder is always available without quitting the program you're using, and you can have as many programs open simultaneously as will fit in your computer's memory. Multitasking's valuable benefits sometimes have disorienting side effects, however. For instance, you may think the program you're using has unexpectedly quit when actually you've switched to another open program by clicking one of its windows. You must condition yourself to look at the menu bar when you need to know which open program is currently active.

System 7's Top Ten Desktop Surprises

The first clue that a user is running under System 7 will be the new look of the Finder. Here are the top ten visual cues.

1 Finder text

Text is no longer restricted to Geneva font for desktop display. You change the display font in the Views control panel.

2 Apple menu

You no longer install desk accessories with Font/DA Mover; now you simply drop them into the Apple Menu Items folder in the System Folder.

3 Alias files

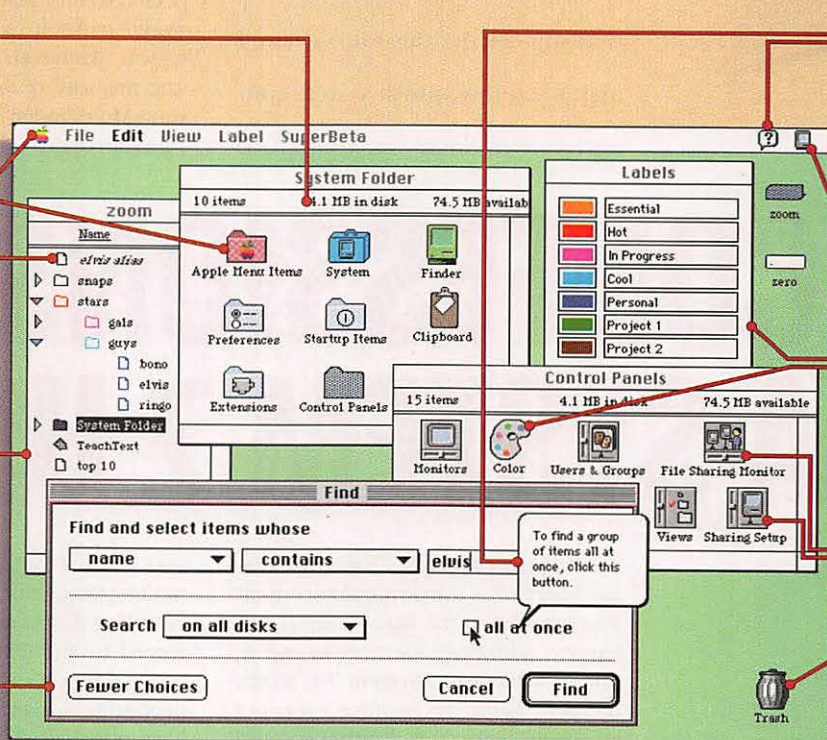

Choosing Make Alias from the File menu lets you create a 1K to 3K stand-in file; you can recognize them by their italicized names.

4 Folder structure

In Name view, a window's folders appear in an indented outline. To show or hide a folder's contents, you click on the triangle next to its icon.

5 Find

Using the new Find command, searches are much more specific.

6 Help menu

Besides offering a variety of Finder Shortcuts, the new Help menu lets you turn balloon help on and off.

7 Application menu

Rather than listing open applications under the Apple menu, as MultiFinder did, System 7 lists them under this new menu.

8 Color

Assign colors from the Label menu to color-code icons. You can also choose colors for title bars, scroll bars, and highlighted text from the Color control panel.

9 3-D Icons

In Icon view, you see shaded, 3-D icons.

10 Trash

The Trash Can no longer automatically empties; it remains bulging until you choose the Empty Trash command from the Special menu.

The active program's icon appears at the right end of the menu bar as the placeholder for the new Application menu. That menu lists the programs that are currently open; choosing a listed program makes it the active program (see "Multiple Programs Open"). The Application menu also enables you to hide program windows without closing them or quitting programs, thereby reducing window clutter. For more information on dealing with MultiFinder, see "Getting Started with System 7," elsewhere in this issue.

Apple Menu

Under MultiFinder using older system software, open programs were listed in the Apple menu. In System 7, the Application menu takes over listing open programs, and the Apple menu has a new role: it expedites opening anything you use frequently, including documents, application programs, desk accessories (DAs), folders, control panels, and even fonts and sounds.

You put an item in the Apple menu by dragging it into the Apple Menu Items folder, which is located in the System Folder. The item becomes instantly available in the Apple menu. (There's no need to restart the Macintosh.)

Color Windows and Icons

Aside from the new systemwide menus (Apple, Help, and Application), the most pervasive change in System 7 is its use of color. Trendy three-dimensional shading modernizes all types of standard windows and dialog boxes—on monitors displaying at least 16 grays or 256 colors, that is. This doesn't do much to improve your productivity, but it sure makes you feel better when you see a Next computer.

Additionally, standard Apple icons have three-dimensional shading on monitors that display at least 16 colors or grays. Most other icons are black-and-white (software developers will probably add color when they upgrade their products for System 7 too). You can customize any icon by pasting a picture from a painting or drawing program into the icon's Get Info window.

New Views

In the improved Finder, you can see, select, and reorganize items from different folders in the same window. All *list views* (name, size, kind, and so forth) display folders and their contents in an indented outline format. The levels of indentation clearly diagram the structure of nested folders. By clicking a triangle next to a folder's icon, you can show or hide the corresponding folder's contents.

The new Finder also lets you control how icons and window contents are displayed. Using the Views control panel, you can pick the font and size of item names and window headings for all views. You can set the alignment of icons in the Icon and Small Icon views.

For list views, you select the icon size, pick which columns of information you want to see, and more. Your Views control panel settings immediately affect all windows.

Finding Items

No more jokes about the Finder not finding anything. The new Find command (located in the File menu) finds and fetches lost items for you quickly—no more hunting through folders and disks for a misplaced file—a chore even with the new outline views.

In its simplest form, the Find command looks through all disks whose icons are on the desktop for an item whose name contains the text you specify. It displays the first item it finds, and opens the folder that contains the item to show the item in its native surroundings. You can find additional matching items with the Find Again command (also in the File menu).

The Find command has an exotic form as well. It lets you specify the type of search: by name, size, kind, label, date created, date modified, version, comments, or lock status. You can also specify exactly what you want matched (for example, a date) and how you want it matched (for example, look for items modified before that date). You can restrict the search to a single disk or to the active window. If you want, the Find command will even select all the items it finds at once in an outline view.

PERFORMANCE ISSUES

When I started using pre-release versions of System 7 last fall, I thought it would be too slow on a Mac Plus, SE, or Classic. In fact, System 7 isn't perceptibly slower overall than System 6 on my 2.5MB Mac Plus, and it is appreciably faster at a few things—such as copying files on my crowded hard drive.

Additionally, I worried that System 7 would devour too much memory and disk space. It turns out that the 2MB that System 7 requires is roughly equivalent to having 1MB with System 6. As a rule of thumb, figure you need 1MB more than you actively use now. (You may have to add more than 1MB, depending on your current RAM configuration.) The only people I would recommend not upgrade to System 7 are those who routinely use all of the memory in a 4MB Mac Plus, SE, or Classic. You also need a hard drive to use System 7, but that's hardly an odd requirement these days.

Aliases

Although the new Find command is very fast, it doesn't take the place of well-organized disks. Enter the System 7 *alias*, chosen from the Make Alias command in the File menu. An alias of a program or document is essentially a stand-in for an original program or document that you can use as if it were the original. It's not a copy, but rather a small (1K to 3K) file that directs the computer to the original file.

You can open an alias, move it, or even drag items to it. In fact, an alias even looks exactly like the original item except its name is italicized and initially has the word *alias* at the end.

Aliases have a variety of uses, and you can read more about them in

"Getting Started with System 7." But just to whet your appetite, here are some things you can do with them.

- Open frequently used programs, documents, and folders from the desktop while the real items remain buried in nested folders.
- Add items to the Apple menu without moving the originals from their folders.
- Organize documents and folders according to multiple filing schemes without duplicating items.
- Simplify access to file servers and individual items on servers.
- Have nearly automatic access to your Mac's hard drive(s) using a floppy disk in any other Mac on the same network.

Editing Icon Names

In Finder 7, clicking an icon no longer selects the name for editing. Instead, to select an item name for editing, you either click the icon and then press either the return or enter key, or click the name itself.

If you're an experienced Macintosh user, the new method of editing icon names is one of the toughest System 7 changes to get used to. On the good side, you can no longer accidentally, and perhaps unknowingly, rename a selected document or folder by bumping the keyboard.

More Finder Improvements

A number of improvements to the Finder give you more control over its windows. The most noticeable improvement is that windows scroll automatically if you drag an item or a group of selected items past the active area of the window. Dragging into a window corner scrolls diagonally.

Clicking the zoom box makes the active window just large enough (or small enough) to show all items in it. You can select multiple items by dragging over them in any view (not just Icon and Small Icon views). Items are highlighted one-by-one as you drag over them, not en masse when you stop dragging. And, you can change the order of items in a list view by clicking a column heading instead of using the View menu.

When you press the \mathbb{A} key while clicking in the title bar of the active Finder window, a pop-up menu

Publish and Subscribe

Publish Files

A photo is published from an image processing file to an edition file.

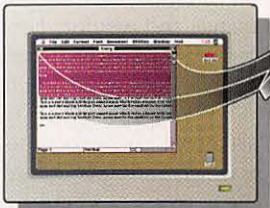

Edition Files

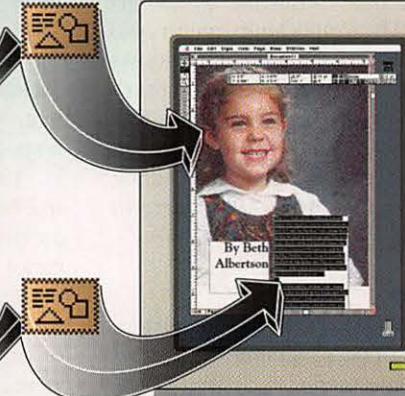

Subscriber File

Both edition files are subscribed to in a page-layout file.

Text is published from a word processing file to an edition file.

When using applications updated to include System 7.0 features, you can select all or part of a *publish* file, create an *edition* file containing that information, and then import that information into any number of *subscriber* files, even across a network. When you update a publish file, all subscriber files automatically reflect the changes. Voilà—live copy and paste.

appears. The menu reveals the path through the folder structure from the active window to the disk. You can open any folder along the path by simply choosing it from the pop-up menu.

You can select an item in a Finder window or on the desktop without using the mouse. Typing an item's name or the first part of it selects the item. There are other keystroke combinations that select an item near the currently selected item, open the item, and more. The details are spelled out by the Finder Shortcuts command in Finder 7's Help menu.

When you drag an item from one Finder window to a folder in an overlapping window, Finder 7 keeps the destination folder in view. Older Find-

Multiple Programs Open The Application menu's icon at the right end of the menu bar tells you which program is active. The menu itself lists all currently open programs below the gray dividing line. Choosing a program makes it the active program. The first command hides (but doesn't quit) the active program and switches to another open program. The Hide Others command hides the windows of all open programs except the active program.

ers bring the source window in front of an overlapping target window as soon as you begin dragging, possibly covering the destination folder.

If windows have become smarter, then the Trash has become dumber (and safer). Now the Trash is emp-

198

MACWORLD • JULY 1991

tied only when you choose the Empty Trash command from the Special menu. You can even shut down the Mac, and the Trash doesn't empty if there are files there. Unlike older Finders, Finder 7 does not fuss if you put application programs and System files into the Trash. It also lets you drag locked items to the Trash but won't delete them until you unlock them.

Finder 7 lets you classify folders, programs, and documents by labeling them with a word or phrase from the Label menu. The Label menu replaces the Color menu that appears on color Macs running older Finders; thus, on systems that are able to display colors or gray shades, labeling an item also colorizes it.

System Folder Renovation

Nothing mentioned so far helps you organize the king of clutter—your System Folder. Now preference files and control-panel and start-up documents are kept in special folders inside the System Folder. Moreover, Finder 7 is smart enough to place many of these files in the new Extensions, Control Panels, or Preferences folders when you drag them to the System Folder icon.

The old Control Panel desk accessory, like the System Folder, has become overcrowded and harder to use. In System 7, selections in the Control Panel are now separate control panels that you open like ordinary application programs. They are kept in a special Control Panels folder within the System Folder. For convenience, an alias of the Control Panels folder appears in the Apple menu so you can open the folder easily.

One problem that you may encounter is that some older preference files, control panel documents, and system extensions don't work correctly when you put them in the new Extensions, Control Panels, or Preferences folders. In those cases, you have to drag the items to the System Folder window (not to its icon) for them to work.

The Font/DA Mover is no longer necessary. You can open desk accessories just as you would regular application programs (by double-clicking the icon) or you can install DAs

SYSTEM 7 BOILED DOWN

On the whole, Apple engineers have succeeded admirably in making System 7's new capabilities available but not intrusive. The system software's look and feel has changed amazingly little considering that System 7 lets you do the following things:

- Access and organize stuff on disks faster and easier with a greatly improved and omnipresent Finder.
- Open several programs concurrently (memory permitting) and have unattended tasks done in the background while you continue working.
- Use disk space as if it were memory for opening programs and documents (though not on a Mac Plus, SE, Classic, LC, or Portable).
- Share files with other computers networked to your Macintosh.

- See sharp text at any size on any screen, printer, or other output device.
- Be cool, with color windows and icons (requires a color monitor).

All these capabilities are available with the programs you have now. With future upgrades to application programs, you can

- Remain proficient in a wider variety of programs and learn new ones more easily by using interactive help.
- Automatically update copied material in one document when the original material in another document (which can be on another Mac in your network) changes.
- Link programs to merge their capabilities.
- Get data from large databases on other computers with one simple menu command.

in the Apple menu by dragging them to the Apple Menu Items folder. To install fonts you drag their icons to the System Folder. Finder 7 puts fixed-size bitmap fonts and TrueType outline fonts in the System file for you.

If you open the System file (you can do that now), you see an icon for each installed font. Opening a font icon displays some sample text in that font. To remove a font, drag its icon to a folder or the desktop. You can install, inspect, and remove three other kinds of items in the same manner: system alert sounds (for use with the Sound control panel), keyboard layouts, and language system scripts.

Directory Dialog Improvements

The directory dialog boxes you get when you use Open and Save As commands from any program work more like a one-window Finder. As always, a single directory window lists the contents of a folder or disk alphabetically by name. Names longer than 25 characters now appear in the directory window in compressed-style text.

More important, directory dialog boxes provide a view of the desktop

for the first time—you can open disks and other items on the desktop. In fact, opening a disk at the desktop level is the new method of switching disks (see "Desktop Access").

TrueType

Thanks to System 7's TrueType fonts, almost all programs display and print smooth text at any size. (The exceptions are programs that restrict your selection of text sizes.) TrueType fonts are variable-size outline fonts similar to the PostScript fonts that look so sharp on LaserWriters.

If you use large font sizes or have a printing device that uses screen fonts—an ImageWriter, fax modem, ink-jet printer, or PostScript-less laser printer—TrueType fonts will save disk space. Because TrueType fonts can be scaled to any size, you no longer need the double, triple, or quadruple fixed font sizes that eat up your hard drive.

You can still use old-style fonts, but, as always, they look good at their fixed sizes and lumpy when scaled to other sizes. You can intermingle TrueType fonts with the PostScript fonts used by LaserWriters and other PostScript devices. If a document being printed on a LaserWriter contains

a TrueType font that has no PostScript equivalent, System 7 smoothly scales the TrueType font to the resolution of the output device.

Extending Memory

Less flashy than TrueType fonts but probably more important to your productivity are System 7's two means of letting you use more memory: 32-bit addressing and virtual

Not all applications will be compatible with 32-bit addressing, however. Apple has been exhorting developers to make their products 32-bit clean for two years now, but not all have complied.

Unfortunately, Mac II, IIx, IICx, and SE/30 models cannot use 32-bit addressing because their ROM (permanent read-only memory) chips are incompatible with it. Although those models have a replaceable ROM, Apple has no plans for making ROM upgrades available. Mac Classic, SE, Plus, and Portable models can't use 32-bit addressing because their 68000 central processing units don't support it.

Virtual Memory

You may be able to increase the amount of memory available on your Macintosh without installing more RAM. System 7 can transparently use part of a hard drive as additional memory. This extra memory, called virtual memory, lets you open more programs at once and increase the amount of memory each program gets when you open it.

However, virtual memory only works on a Macintosh equipped with a Paged Memory Management Unit (PMMU). The SE/30, IICx, IIx, IIsi, IICi, and IIcx models all have PMMUs, and a Mac II can be retrofitted with one. An LC can be upgraded with an accelerator board containing a PMMU. However, a Mac Plus, SE, Classic, or Portable with such an accelerator can't use virtual memory because the ROM chips in those Macs lack some necessary information.

File Sharing

If your Mac sits on a network, System 7 lets you share hard drives, folders, and files with other networked users. You can access folders and drives on other Macs; likewise, users of other Macs (including those running System 6 with AppleShare client software) can

access folders and drives on your Mac.

Before any of this is possible, however, you must use the new Sharing Setup control panel to configure your Mac as an AppleShare file server. Then, select either the drive or folder you want to share, and use the Finder's new Sharing command to display the item's sharing information window. There, you specify *access privileges*, that is, who can see the item's folders, see its files, and make changes to it. You identify registered users, set their passwords, and create groups of users with the new Users & Groups control panel.

To share another Mac's folder or drive, you use the Chooser. It lists as AppleShare file servers the names of all computers that are sharing their folders and drives. After you select one, the Chooser asks you to connect as a guest or a registered user, and then presents a list of items you may share.

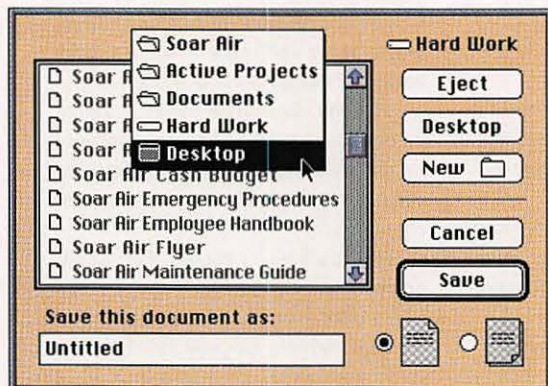

Accessing someone else's folders or drives is considerably slower than accessing your own. Also, your computer's performance degrades markedly while others share your folders or drives.

A Macintosh should have at least 2.5MB of RAM if you want to open more than a single midsize program (say maybe a DA or two as well) while sharing folders or drives. Sharing items with others increases the system's memory usage by 250K to 300K. That leaves only about 600K for opening programs on a 2MB Mac.

Live Copy and Paste

Some programs use System 7 to let you share information *dynamically* among documents, which means that changing original information in a file automatically updates copies of it—whether that copy is on your Mac or on a networked Mac. Think of it as a live copy and paste.

To make information available for dynamic sharing, you *publish* an *edition* of it. You then include copies of the published information in a document by *subscribing* to the edition (see "Publish and Subscribe"). Only programs that include Edit menu commands for publishing and subscribing can dynamically share information. You won't find these com-

Desktop Access In Open, Save As, and other directory dialog boxes, you get to the desktop level by choosing Desktop from the pop-up menu or by clicking the Desktop button (top). Then you can open a disk or other desktop item (bottom). Italicized file and folder names indicate alias copies (here the word *alias* was edited from two folder names).

memory. Not everyone will be able to use these options, however.

By using 32-bit addressing, some Macintosh models can access more RAM (random access memory). To turn 32-bit addressing on and off, you use the new Memory control panel. With 4MB RAM SIMMs installed, for example, turning on 32-bit addressing lets you use 10MB of RAM on an LC, 17MB on a IIsi, and 32MB on a IICi or IIcx. If 32-bit addressing is off, you can only use 8MB of RAM regardless of the amount installed.

COMPATIBILITY REPORT

If you're like most Macintosh users, most of the software you already have will work with System 7. Some programs will have minor cosmetic flaws, others will acquire minor disabilities, and a few will break. The older and more obscure a piece of software is, the more likely it is to have serious problems, and the less likely it is to be upgraded for System 7. Although System 7 itself seems quite rugged, you should expect more system crashes using it than with System 6.0.5 until you upgrade your other software to versions made for System 7.

So that you don't have to crash test all your software, Apple will include with System 7 a HyperCard stack called Compatibility Checker. Using information Apple has compiled from developers, Compatibility Checker checks your application programs, desk accessories, system extensions, and control panels; lists their version numbers; and reports what is known about each item's compatibility with System 7. The checker notifies you if your version of

a certain program doesn't work with System 7, or if your version is compatible but there is a more recent version. In either case, the Compatibility Checker gives you a phone number to call for an upgrade. If your version is compatible or its compatibility is unknown, the checker reports that too.

Programs can be compatible with System 7 and still lack the following four features: balloon help, live copy and paste (publish and subscribe), data access (DAM), and program linking. Software developers must upgrade their programs to take advantage of those features. Also, software must eventually be made 32-bit clean if it isn't already. Many companies have already announced upgrades or new products incorporating these features, including Andyne Computing, Articulate Systems, Claris, Deneba, Farallon, Interleaf, Microsoft, Pharos, RagTime, Softsync/BLOC, SuperMac, Symantec, and Symmetry. In addition, Bitstream, Kingsley/ATF, Linotype, and Monotype Typography USA will be making TrueType fonts.

mands in the programs you have now, because software developers must upgrade their programs to include those commands.

Accessing Data

The programs you have now must also be upgraded to take advantage of System 7's Data Access Manager (DAM). DAM provides a simple method for getting data from a variety of large databases resident on host computers of all brands and sizes. You can usually recognize a program that supports DAM by the Open Query command in its File menu.

You use the Open Query command to open a *query document* that describes the type of data you want. A dialog box describes what you will get if you enter the information it requests and click a button to start the query. For example, it may ask you to enter your name and password and select a type of report. Behind the scenes the query document and DAM connect to the host computer, request the information using the arcane commands of the host database, obtain the information, and finally, paste it into your document.

Program Linking

System 7 paves the way for programs to work together. While you work in

one program, you will be able to use the commands and tools of other programs made by different software vendors. For example, Claris's new version 2.5 of MacProject II uses Claris Resolves, a forthcoming spreadsheet program, to prepare graphs from tables of numbers.

Program collaboration relies on System 7's framework for information interchange, called AppleEvents, which lets any program send messages to other programs. System 7 stores AppleEvents messages sent to a closed program and forwards the messages when the program is next opened. It also dispatches messages across a network to programs on another Macintosh.

Getting Used to System 7

All these new features and capabilities may sound intimidating at first. Remember, though, that you can learn how to use most of them at your own pace. Take your time exploring the many Finder improvements. Wait to explore file sharing, virtual memory, and 32-bit addressing until you need them. Turn on balloon help only when you find it beneficial. Figure out publishing and subscribing (live copy and paste) and data access when you get updated programs that include them.

System 7 brings only a few changes you must face from the moment you begin using it. You can't dodge multitasking; you must get used to having multiple programs open at once. Also, longtime Macintosh users will have to learn a few new skills when editing icon names and using the standard directory dialog boxes for opening and saving items.

You upgrade to System 7 not for the changes it forces on you immediately, but for the possibilities it offers. Take your time. If you currently have only 1MB of RAM, wait to upgrade until you can afford to increase your Mac's memory (and get a hard drive, if you don't already have one), but do upgrade. As surely as 20MB hard drives have given way to 40MB hard drives, a year from now we will all think of System 7 capabilities as ordinary Macintosh capabilities. 

.....
Contributing editor Lon Poole has reported on System 7 since Apple announced it two years ago. He switched to System 7 last fall and since then has used it on a variety of large and small Macs in preparation for this article and for his complete book on the subject, Macworld Guide to System 7 (IDG Books, 1991).

TYPE RENAISSANCE

A primer on digital type

BY ALEX BROWN

THE COMING YEAR PROMISES TO BE FRAUGHT WITH NEW CHOICES IN THE USE OF TYPE, AND THIS IS THE BEGINNING OF A FOUR-PART SERIES DESIGNED TO HELP YOU MAKE THOSE CHOICES INFORMED ONES. THIS ARTICLE IS A PRIMER ON THE PRINCIPLES OF DIGITAL TYPOGRAPHY. IN THE SECOND ARTICLE, "DESKTOP FOUNDRY," WE WILL EVALUATE TODAY'S TOOLS FOR TYPE DESIGN. THE THIRD, "POSTSCRIPT VERSUS TRUE-TYPE," WILL COMPARE TWO KEY TYPE TECHNOLOGIES. THE FOURTH, "TOP-NOTCH TYPE," WILL BE A GUIDE TO ACHIEVING HIGH-QUALITY TYPOGRAPHY ON THE MAC.

Innovations in typesetting have revolved around changes in the master images of characters, allowing us to harness new kinds of machines to reproduce type. In 1456, Johannes Gutenberg perfected a method for casting individual characters in metal, and handset type began its 400-year domination of publishing. Handsetting type, by assembling individual metal letters in lines, is a tedious business. Trained compositors might produce ¼ line a minute, and after printing, they must return every character to the typeset. With a cast letter as a type master, an enormous inventory of type is required to produce different sizes and type styles, and the proper fit of the letters is governed by their placement on metal type bodies. Handset type is inelastic, unchangeable, and requires intensive manual labor to set. Nevertheless, its introduction represented an exceptional advance over handwritten manuscripts of the prior 5000 years.

The next typesetting innovation occurred in 1886, when Ottmar Mergenthaler commercially introduced the Linotype, a machine that mechanized every aspect of composition, and introduced a keyboard as a means of control. The Linotype is a linecaster, a machine that is something of a self-contained foundry. The type

Photograph by Geoff Horn

masters are matrices—molds from which type is cast, not the type itself (as in handset type). The matrices clatter down chutes in a huge storage case when corresponding letters are typed on the keyboard. After the compositor finishes a line, the row of matrices is drawn into a casting apparatus and filled with molten metal. After use, matrices are automatically sorted and returned to the storage case. By using a type master that is one step away from the end product, linecasting ended the age-old compositor's problem of running out of particular letters and the difficulty of distributing type after use. Above

all, the machine made typesetting faster than it had been before. Good compositors can set seven lines per minute.

In 1949, Rene Higonnet and Louis Marius Moyroud demonstrated a machine that set type from photographic masters at the American Newspaper Publishers Association conference. Their machine, the Photon, went into commercial use in 1954, and the publishing industry began a slow but steady shift toward photocomposition. Instead of using metal type or matrices, photocomposition machines make type images by directing a stroboscopic lamp through a film master of the type design, exposing an image of the letters on light-sensitive paper. A lens enlarges the film master to different type sizes, and an escapement mechanism positions each character on the line. This system freed typesetting from the physical constraints of metal type; letters no longer had metal sides that fastidious handset compositors had to file away in order to ensure aesthetic letterfit. The white space around letters was under the typographer's control. Because they used light to make the type images, photocomposition machines were quite fast compared to all previous technologies, yielding 50 lines a minute, producing type faster than people could enter text.

The introduction of digital phototypesetters in 1972 changed typesetting yet again, and once more the type master led the revolution. Digital phototypesetters use a digital representation of the design as a master instead of an image on a piece of film. This means that letters can be retrieved many times faster than with nondigital typesetters—3000 lines can be set every minute, which amounts to a full magazine page in 15 seconds. Digital type masters never wear out, they are compact and portable, and they allow more sophisticated type manipulation than any of the previous typesetting technologies.

The first digital typesetters used an electron beam to write digitized letterforms onto a cathode ray tube (CRT). The type image on the CRT is then projected onto photosensitive paper, yielding output identical to that produced by photocomposition. After settling on digital storage of fonts, the typesetting industry then pursued more efficient output devices. The electron beam painting a CRT tube was eclipsed in sharpness by a laser beam generating an electrostatic charge on a drum. Toner particles are attracted to the charged areas and fused onto paper with heat. This eliminated photographic development of typeset galleys, and dry typesetting began.

In 1985, the introduction of PostScript brought digital typesetting to a vast new consumer market that had previously been unable to afford it. Typesetting itself moved downward

MAKING TYPE LEGIBLE

Resolution	1 Pixels activated by an unhinted font outline	2 Font outline reshaped by hinting	3 Pixels activated by a hinted font outline	4 Resulting bitmap, enlarged and at actual size
At 72 dpi screen resolution				
At 144 dpi ImageWriter resolution				
At 300 dpi LaserWriter resolution				
At 600 dpi high-resolution laser printer		Hinting not needed		
At 1200 dpi medium- resolution imagesetter		Hinting not needed		
At 2400 dpi high-resolution image- setter		Hinting not needed		

Scaling an outline font for display as a bitmap can distort the character's form, especially at low resolutions where only a few pixels are available to create the complex image. 1) Pixels whose centers fall within the area defined by the character's outline are turned on. 2) Hints are rules for adjusting the character's outlines to create the best possible image at low resolutions. 3) Hints subtly alter the original outline so that selected pixels can be turned on. 4) The result is that legible letters can be imaged at low resolutions. At higher resolutions the pixels are smaller; this means more of them fall in the outline, and they re-create the letterforms more accurately. The same letter imaged at 2400 dpi (imagesetter resolution) needs no hints to produce what appears to be an exact representation of the original outline.

from expensive, proprietary equipment used by newsrooms and commercial typesetters to inexpensive systems that were within the reach of individuals and small businesses. PostScript provided a way to obtain type and graphic images from a variety of output devices, ranging from high-resolution imagesetters to desktop laser printers.

The ABC's of Letters

While the technology used to set type has changed radically and with increasing speed, the alphabet itself has remained remarkably stable. The same letters you see emerging from a Laser-Writer were originally drawn with pen and brush, or carved in stone or clay. The Romans contributed the root design for capitals, and medieval European scribes perfected the lowercase letters.

You're reading 9-point ITC Garamond Light right now, from a font family that you can purchase from Bitstream for less than \$100. In fairness, you're a bit more than \$100 away from producing pages like this, but page-layout applications for the Mac offer type management capabilities that in many ways exceed the control professional typesetters had through the 1960s.

The gap between this magazine page and your printed output is up to you. If you learn about typography, equip yourself with the proper applications, peripherals, and fonts, and have access to a high-resolution printer, you have the capability of composing text as professionally as any commercial typesetter. But be forewarned, typesetting is a difficult craft and can be an all-consuming passion. As Donald Knuth (see "Capturing the Designer's Intentions") remarked, "Now when I go into a restaurant, I spend the first five minutes staring at the type on the menu . . . only later do I notice what kinds of food they serve."

The most fundamental distinction between type styles is between serif and sans serif faces. A serif is the finishing stroke on the letters that you see in the Garamond that you are reading right now. A sans serif face, like the one in the bold subheads throughout this article, is one that lacks these finishing strokes. A closer examination of the details of each letter, and an understanding of the key elements common to all letters, is the next step in exploring typography (see "Illustrated Guide to Type"). A well-trained eye will allow you to identify hundreds of widely used typefaces and to recognize the distinctions of thousands more.

The Digital Domain

For the opening ceremony of the 1984 Los Angeles Olympics, the audience was, in effect, digitized. Each seat had a color flash card, and the

Matthew Carter's career spans the entire development of digital typography. Currently vice president of design at Bitstream and an internationally recognized type designer, he has done everything from handcutting type for traditional letterpresses in Holland to designing typefaces for AT&T's U.S.

telephone directories and *National Geographic's* captions. In between he has designed type for phototypesetting equipment from Crosfield Electronics and the Mergenthaler Linotype Company.

Carter thinks that the main difference in designing for a digital medium is that the designer never really knows how the type is going to be used in the end. When a letter was cast

MATTHEW CARTER
HAS DESIGNED
TYPE FOR EVERY-
THING FROM
LETTERPRESSES TO
LASERWRITERS.

in metal its design was frozen completely, and when type was set on proprietary phototypesetters, type designers had strict control over how their designs were implemented. But today, because digital type can be output on many different devices, at many resolutions, designers have no idea where their designs will end up, be it billboards or baseball bats.

Yet for all these new factors, Carter is emphatic about one central issue, "a high-end imagesetter is without question the best way of representing type that has ever existed. If you can't design type that looks good on those machines, you never could design type that would. It is the perfect way to image letters."

To Carter, technology is not now, and never has been, the determining factor in type design. "People do say that digital technology imposes itself upon letterforms. But it will only do this if the designer allows it to. If you were designing by hand and were incredibly lazy, you'd have bad design too. The fact is, with digital typography, you can really make any shape that you like. Technology can only show what you tell it to

People say that digital technology imposes itself upon letterforms. But it will only do this if the designer allows it to.

show. Good design is entirely the responsibility of the designer. If you set out today to design a font with current digital tools, it will be years in your professional progress before you discover things that you can't do. And then, they will undoubtedly deliver an upgrade."—L.W.

spectators were instructed to hold up their cards on cue to form a pattern none of them could see, or form, alone. Given enough people to hold the cards, you can make pictures of flags, the Taj Mahal, or Garamond. This stadium full of people holding cards is much like a computer screen displaying black pixels and white pixels, or a printed black-and-white page. Individually, each bit signifies very little, but collectively they can create images of great subtlety and meaning.

These digital records of letter shapes can be stored compactly, preserved indefinitely, and represented on screens and printers flexibly. The simplest way to record a shape digitally is with a

bitmap, a map of which screen pixels are turned on and which are turned off. Imagine the dots an extremely patient artist would draw if he or she marked every position on the line instead of drawing the line itself.

The Mac's display screen is a CRT that emits light when its phosphorescent surface is bombarded by a beam of electrons. The beam itself scans the surface line-by-line and is turned on or off at precise intervals, creating picture elements, or pixels, on the line currently being scanned. What the beam writes are pixels, and the line-by-line writing process is called raster scanning. A bitmap is the image a printer puts

ILLUSTRATED GUIDE TO TYPE

12 IDxhp

13 IDxhp

14 *IDxhp*

15 IDxhp

1 Point size A measurement of height, from the top of the *ascender* to a fixed depth below the *descender*. There are 72 points in an inch, so 36-point type occupies about 1/2 inch, including the shoulder.

2 Cap height A measure of height, from the *baseline* to the top of a capital character. The highest swell in curved characters can reach past this height.

3 Shoulder The fixed space below the *descender*. This ensures that the descenders from a line of type don't contact *ascenders* and capitals on the line just below when no leading, or space between the lines, has been added.

4 Baseline An imaginary horizontal line on which the base of every letter aligns. *Descenders* fall below it, and the deepest swell in curved letters overhangs it slightly.

5 Serif A small finishing stroke, roughly perpendicular to the main stroke of a character. The

presence or absence of serifs is a major type classification.

6 Counter The white area enclosed by the curves or lines of a character, like the holes in a *D*, *e*, or *B*.

7 x-height The height of lowercase characters without *ascenders* or *descenders*, such as the *x* or *e*. Every letter occupies this minimum depth, making x-height the most visually significant dimension in a type design.

8 Set width The total horizontal white space that a character occupies. Additional space is added before or after the character and determines the default letterspacing.

9 Ascender The portion of a lowercase character that extends above the *mean line*. It may be quite tall relative to *x-height*, or very shallow.

10 Descender The portion of a lowercase character that falls below the *baseline*. Usually much shallower than the height of an *ascender*.

11 Mean line An imaginary horizontal line that falls along the top of lowercase letters without *ascenders* to define the top of *x-height*.

12 Roman Type that is not *italic* or *bold*; often called regular. The root design in a type family is roman, and the family may be extended with weight and width variants.

13 Boldface A heavyweight version of a type design, in which all strokes are thickened. The contrast between thick and thin strokes is often greater in bold than in *roman*.

14 Italic Type that slants, and is generally lighter in weight than the *roman* within the same family. Almost always very different in design from the roman.

15 Sans serif A type design without *serifs*, often with nearly uniform line weight.

on paper, as the printer's rasterizer specifies which dots within the page's grid are on (black) or off (white).

Bitmaps conveniently describe the final images that both screens and printers produce but present some problems. The Mac's display consists of 72 dots per inch, while the LaserWriter has a hearty 300 dpi, and a high-resolution output device, necessary for professional typesetting, offers well over 1000-dpi resolution. If your type masters are bitmaps, you need a different set for each output device. What's more, you would need different bitmaps for every size of type, since a bitmap records the specific dot array necessary to compose a shape, and so cannot be resized with good results. In fact, many early Macintosh fonts are exactly that, specific bitmaps designed for particular sizes and styles. Until the introduction of Adobe's ATM (Adobe Type Manager) technology, the Mac needed screen fonts that were hand-tweaked bitmaps to draw legible characters on screen.

Outlining the Advantages

Instead of packing hard drives and printers with bitmaps, though, current digital font technology is based on mathematical descriptions of the outlines of letterforms. Outlines describe font data with greater economy than bitmaps do and rely on an interpreter's calculations to create the bitmaps you ultimately need, at the highest possible resolution for the output device you use. Instead of recording which pixels must be turned on and off to create the whole letter, as a bitmap does, an outline describes only the boundary of each letter and does so with a mathematical formula. The outline formula is then mathematically manipulated (or scaled) to create an outline of the letter at the requested point size. The pixels whose centers fall inside this outline boundary are identified and activated (or turned on), creating the bitmap necessary for printing or display. At least, that is the idea. In fact, there are all sorts of challenges associated with deciding which pixels fall on or off a scaled outline (see "Making Type Legible").

Representing a letterform by the mathematical description of its outline solves several important technical problems. First, the outline eliminates a host of redundant information by ignoring the black interior of a letter, concerning itself only with describing the boundary of the shape. Second, the description is compact and easy to manipulate mathematically. And since the computer understands the letter as a mathematical formula, changing a letter's size, or skewing, slanting, and rotating it, becomes possible through a simple series of numeric calculations. Third, the type designer doesn't have to know in advance which kinds of output

When Donald E. Knuth, professor of The Art of Computer Programming at Stanford University and author of three volumes (so far) of *The Art of Computer Programming* (Addison-Wesley), decided to create a computer language to describe digital type, he had no idea that it would become a nine-year project.

DAN ESCOBAR

His initial work on digitizing fonts took place at Xerox PARC (where John Warnock was also hard at work developing PostScript). What Knuth had imagined as a simple task, digitizing fonts, turned out to be a difficult one. He ended up trying to digitize fonts with a TV camera and a primitive frame grabber.

Then he took 35mm slides of the font, projected them on his living room

wall, held a piece of paper to the wall, and traced the letters. Again, the resulting outlines were fuzzy and he got poor data.

METAFONT IS

THE FIRST COMPU-

TER LANGUAGE TO

DESCRIBE THE

UNDERLYING PRIN-

CIPLES OF

FONT DESIGN.

"Then it occurred to me," continued Knuth, "that these letters were designed by people with ideas . . . what I wanted to do was somehow state the intelligence of what font designers were doing, and find a way to describe it digitally. It would be neat to have a language for graphics where you would state how you were drawing something. It would be a tool for designers rather than a tool for copying things."

Metafont, a computer language for creating fonts, was the product of that search. By generalizing the underlying principles of a font, it allows designers to go beyond creating a single font. Instead, they specify the form of the letters in Metafont, modifying them with parameters, numeric variables that change the generalized shape in a particular way. A designer can create an entire family of fonts with an infinite number of variations.

"I knew that digital typography was going to be big when it hit the world back in the late

I wanted to somehow state the intelligence of what font designers were doing.

1970s," recalled Knuth. "We had one of four Xerox XGP low-resolution graphics printers at the Artificial Intelligence Lab at Stanford University . . . when the XGP was broken, half the parking lot would be empty."—L.W.

Note: Metafont is in the public domain and is available from the TEX user group, box 9506, Providence, RI 02940.

devices will be used to print the type. Because the outline has no relationship to the ultimate point size produced, it is scaled when printed, outputting type at any size on any output device (see "Making Type Legible").

It's Open to Interpretation

The key to this elegant system of outline fonts is the interpreter, a complex program that does the mathematical calculations necessary to scale type, developing the bitmaps necessary for a particular device, using the same outline master for all resolutions and environments. Interestingly, the interpreter can be based in the printer or in the computer's operating system, or it can be a special application of its own. I've seen all these sources used, and it's not surprising that vendors are still shuffling this deck, looking for the most elegant solution.

PostScript is the best-known interpreter. A printer with a PostScript raster image processor

itself. In theory, this approach ensures that key aspects of font-imaging technology can evolve independently of printers or screens. In TrueType, the Mac is pressed into service to carry out instructions that a printer's CPU once performed. The most appealing benefit here is that every dime you invest in upgrading your Mac has the potential to improve your type display and output speed.

Theory into Practice

The Mac has always offered an advantage over character-based display systems in the integration of graphics and text in documents because it displays screen images from bitmaps—the underlying model for all digital imaging. Even better, its management of type makes most of the essential work—communication between the application, system software, and output device—invisible to the user.

When an application accepts your keystrokes, it looks to a font metrics table to see how much horizontal space the letter you've chosen occupies on the line. It uses this width information to position the characters in that line of type and to determine where to break the line. At the same time, a screen representation of the character is called up or scaled on the fly to represent that letter on screen. If you're using Adobe's ATM, its interpreter builds the bitmap from the same outline master used by the printer. Without such an interpreter (under System 6.0X and before), the Mac fetches a specific bitmap—one of the screen fonts you've loaded with Font/DA Mover. If the exact size you want isn't available, the system scales an existing screen font to size, often with clunky, chunky results. With System 7.0 or the TrueType INIT, the Mac produces display bitmaps from the same outlines the printer will eventually use, in a process similar to the way ATM prepares them.

When you are ready to print a page, the application you are using, working together with the printer driver you've selected using the Chooser, converts the commands you've given your application into the page-description language that the printer uses to image pages. If you've chosen a PostScript printer, for instance, your document is translated into PostScript syntax. Then the printer constructs an image of the page in memory. Within the stream of PostScript commands headed from the Mac are instructions for the placement of text, images, lines, and other graphic elements. The application uses width information embedded within the fonts to display text, while the PostScript printer constructs font bitmaps according to the outline font data stored in its ROM chips or downloaded to its RAM.

This communication between the Mac Operating System, the application program, and the

**The same letters you see
emerging from a LaserWriter
were originally drawn with
pen and brush, or carved in
tablets made of stone or clay**

(RIP) converts font outlines in the printer's memory to bitmaps. (PostScript-compatible printers usually also locate the interpreter in the printer.) The Mac's current operating system (6.0X) uses QuickDraw, a set of graphics commands and routines, to display fonts on the screen. However, QuickDraw wasn't designed for the full range of interpreter chores, and it is limited to rousting out the bitmaps stored in the System Folder as screen fonts, and scaling them, if need be, to different point sizes. QuickDraw can also derive bold, oblique, and shadow/outline styles for the stored fonts.

Another approach to interpreting outlines is embodied in Adobe's ATM, a subset of the PostScript interpreter that runs on the Mac instead of in the printer. This software goes off to the printer font outlines to produce smooth bitmaps in any point size and then supplies those bitmaps to QuickDraw and the Mac's Font Manager.

Apple's TrueType, available as an INIT for System 6.0.7 and built into System 7.0, promises a major turn for font technology. TrueType endows the Mac's system software with an interpreter and locates most of the necessary decoding information within the font description

printer allows a system in which you can mix and match printers, applications, systems, and fonts freely.

New developments, from Adobe, Apple, and others, promise improvements in digital typography that will both expand our control of type and return to us the aesthetic refinements that were lost when handset composition became impractical.

Adobe's Multiple Masters approach provides two or more outline masters to define a character. When a light and an extrabold version of the letter are both provided, users can summon type weights that fall anywhere between the two masters, obtaining medium, demibold, or any weight they wish from a single font. A font including four masters can provide a spectrum of weights plus the range of widths between expanded and condensed.

Fine type designers have always known that the huge difference in size between 8-point text and 72-point headlines calls for different designs in the characters themselves. When type was cast in metal, these adjustments were made as a matter of course, but when phototypesetting was introduced, few vendors offered the multiple film masters necessary to maintain distinctions among type sizes, and fewer users bought them. Instead, it became common practice to use a single master and rely on the phototypesetter's lens to create the various point sizes needed. Scaling type from a single master, however, is not the best solution since that fattens a letter as much as it increases its height.

Until now, digital type imaging relied on single outline masters. TrueType technology will permit subtle scaling changes to preserve character stroke weights during enlargement. Adobe's Multiple Masters will offer specific differences in master outlines, plus the ability to alter x-height and other character attributes.

Digital type is inexpensive, widely available, and easy to use, and it has the capacity to fulfill some of the highest aesthetic goals we have, and have ever had, for type. Drawbacks of digital type will continue to challenge font designers and typographers to refine their work for this new, and still evolving, medium. And they will be the more eager to do so because in you their innovations have a large, watchful, and appreciative audience. In fact, you are not only watching this revolution, you are making it. **M**

.....
Alex Brown is the author of *In Print: Text and Type* (Watson-Guipill Publications, 1989), and is a consultant to magazine publishers. She believes she was born at exactly the right time, because she set type conventionally just long enough to dream of the Macintosh before it arrived.

If any name is synonymous with digital typography, it is John Warnock. Chairman and CEO of Adobe Systems, Warnock has been at the center of virtually every significant type development since 1985, when PostScript was released on Apple's LaserWriter.

When he worked at Xerox Parc (1978-1982)

it was widely believed that building high-quality bitmaps for low-resolution devices was impossible.

But when he left and formed Adobe with Chuck Geschke, Bill Paxton, and Doug Brotz, finding a way to do it became a business necessity. Their pioneering work developed the techniques that PostScript uses to build bitmaps at a wide variety of output resolutions.

JOHN WARNOCK'S

PIONEERING WORK

ON POSTSCRIPT

BROUGHT

TYPOGRAPHY TO

THE DESKTOP

Warnock remembered that, at first, it was difficult, if not hopeless, to capture high-quality font outlines from printed sources. "We even," he remembers, "employed some of our kids for the early digitizing. I digitized the first alphabet myself. Those were hopelessly primitive attempts. We'd get the typeset masters, put them on enlarging copy machines, and then trace around these copies with digitizing tablets. We had terrible outlines to work with at first."

Creating good type, they learned, only got harder as their eyes, and sense of design, became more discriminating. Eventually, they hired designer Sumner Stone to help make their fonts correct typographically.

"One of the big problems with inventing typographic technology," Warnock says, "is that if you don't understand the cultural and subtle design aspects of typography, you can't do a good job. We've tried very hard to combine the art, the craft, and the science of type at Adobe."

"At first," he recalled, "it looked like a simple, straightforward technical problem; it is only after several years that you begin to appreciate the

There is no precise mathematical description of type, only a cultural definition. It is part of the fabric of the culture.

subtlety and difficulty of what you're dealing with. I know 10,000 times more about type now than I did in 1982, and I'm still learning. There is no precise mathematical description of type, only a cultural definition. It is part of the fabric of the culture."—L.W.

Speed Tests

All times in seconds; accelerators ranked fastest to slowest in overall performance

*Total Systems has replaced the 25MHz Gemini accelerator with a Gemini II-series accelerator that has the same specifications but comes only as a 68030-based product.

Processor-Intensive Tasks

Processor-intensive tasks show what an accelerator can do when much of the overhead associated with disk access and screen redraw is eliminated. We tested the accelerators performing such processor-intensive operations as redrawing a graphics file, grouping objects in a graphics file, performing a find and replace in a Word file, and sorting databases.

improved productivity"? Not likely.

Don't apologize for wanting a faster computer; accept your lust for speed. Consider upgrading the Mac with an accelerator board or with an Apple logic board. Basically, either type of board boosts a Mac's performance by replacing the processor already installed in the Mac with a faster one. If you own an older Mac such as a Plus, you might even consider selling it and purchasing a faster Mac, either new or used.

To help you wade through all the choices, Macworld Lab tested 27 accelerator boards to find out which ones were fastest at performing a variety of common operations (see "Speed Tests"). We also tested the different models of Macs to see how their raw speed compares to that of accelerated Macs. Most of the accelerators we tested use the Motorola 68030 processor, which is found in higher-end Macs such as the IIfx. The odd men out were the Dove Mara-

thon 020, the Radius Accelerator 16, and the Radius Accelerator 25, which use the slower Motorola 68020 (found in the Mac II and LC). Although other 68020 accelerators exist, we tested these popular products only in order to compare their performance to the more up-to-date 68030 accelerators. We didn't test any 68000-based accelerators, since we feel that they don't provide a reasonable price-to-performance ratio. And the recently announced 68040 upgrades were not yet

Video-Intensive Tasks

The speed of many tasks depends on how fast the screen redraws as well as on how fast the processor runs. Scrolling is a prime example of a video-intensive task. Here we timed PageMaker, Excel, and Word in scrolling and averaged the results.

Disk-Access-Intensive Tasks

Here we timed the accelerators for opening PageMaker, Excel, ModelShop, ClarisCAD, and Word; for saving PageMaker, Excel, and Word; and for compiling Think C and MPW Pascal. These tasks are all highly dependent on disk access. We averaged the results for all these tasks.

Math-Intensive Tasks

Math-intensive tasks, such as recalculating an Excel spreadsheet and running a calculation in Mathematica, require the use of a floating-point unit (FPU) on the accelerator. The Macs and accelerators with an NA instead of a bar (below) don't support an FPU and so could not run the Mathematica version we used.

available at test time (see "The Motorola 68040: The Mac's Next Brain").

The accelerators we tested are available only for the Plus, SE, SE/30, and the discontinued models of the Mac II series (II, IIX, and IICX). We also tested a few cache boards for the IICI, and one of them transformed a IICI into the fastest Mac we've ever tested. No accelerators were available for the Classic, LC, IISI, IIFX, and the Portable at test time. However, DayStar Digi-

tal, Dove, Mobius, NewLife, Novy Systems, MacProducts USA, and Total Systems will soon ship accelerators for the LC, IISI, and Classic. We didn't forget vintage Macs such as the 128K, 512K, and 512KE, but we decided not to test accelerators for these models because it doesn't make good economic sense to upgrade them.

Processors and Speed

Be forewarned that an accelerator containing the same processor as the

Mac IICI may not make a Mac Plus's overall performance equal to that of the IICI. For overall excellent performance, the Mac needs to have a balanced hardware design. The amount of memory, the speed of the hard drive, and the bus configuration all play important roles in system performance. For instance, the Mac Plus, SE, and Classic use comparatively slow SCSI ports. Reading data from and writing data to a hard drive remain relatively slow on these Macs if you

THE MOTOROLA 68040: THE MAC'S NEXT BRAIN

Closing in on the horizon are accelerators based on the Motorola 68040—the latest member of the 68000 family, on which all Macs are based. Apple will ship a system based on the 68040 as soon as the chip is available in sufficient quantities to meet customer demand. The 68040 will initially be available in only a 25MHz version. When compared with a 50MHz 68030, a 25MHz 68040 is one and one-half to two times as fast in basic integer performance and about five times as fast in floating-point performance. Mac applications overwhelmingly depend on integer performance for most calculations. The performance gains are the result of a number of improvements, including much larger data and instruction caches and a higher degree of integration. One difference between the 68040 and its predecessor, the 68030, is that the 68040 incorporates floating-point operations.

A few vendors have announced accelerators based on the 68040. Total Systems plans to offer the Magellan line of 68040 accelerators. Fusion Data Systems has announced the TokaMac 68040 accelerators for the Macintosh LC, IIsi, IIfx, and SE/30. Novy, IIR, MacProducts, and Siclone told us that they are working on 68040 accelerators. One particularly interesting announcement is the Radius Rocket—a 68040 accelerator on a NuBus board. The Rocket's 68040 will not replace the processor on a Macintosh II-series machine but will permit applications to divide processing tasks between the Macintosh II's original processor and the 68040 on the Rocket. The Rocket is also equipped with a processor direct slot that could potentially be used to hold piggy-backed expansion boards specialized to accelerate options such as SCSI transfers, image compression, and rendering.

Not all vendors plan to develop 68040 accelerators immediately. DayStar, for example, believes that moving to the 68040 will be challenging, since some applications may have compatibility problems with the 68040's new features—memory management, exception handling, and floating-point operations. The company also believes that for most users the 25MHz 68040 will not provide a significant performance improvement over a IIfx because most Macintosh users don't rely heavily on floating-point calculations. DayStar will await Apple's introduction of a machine based on a 68040, which will lead the developer community to solve compatibility problems.

However these issues prove out, you should expect to pay a premium price for a 68040 accelerator, at least for a while. Thus, you will still get the best price-to-performance value with a 68030 accelerator.

add an accelerator that does not include an option for a faster SCSI port.

Still, raw computing power eventually comes down to the type and speed of the Mac's processor. The Mac Plus, SE, and Classic all use the comparatively slow 68000 processor. The performance of these machines can be improved, often dramatically, by adding an accelerator with a faster 68020 or 68030 processor. Similarly, the 68020-based Mac II's speed can be noticeably improved by adding a 68030.

The speed difference can be attributed to the improvements Motorola has made in each chip's design. Unlike the original 68000, the 68020 and 68030 processors include a 256-byte cache that stores frequently used instructions. Since the 68020 and 68030 retrieve these instructions from the cache rather than from slower main memory on the logic board, these processors gain a speed advantage over the 68000. The 68030 ups the ante over the 68020 by including

a second cache for frequently used data. Additionally, the 68030 is more efficient at processing instructions than the 68020 is.

The 68030 also includes memory-management capabilities required for advanced System 7.0 features such as 32-bit addressing and virtual memory. (A less expensive version of the 68030—the 68EC030—does not include memory-management features. One model of the Mobius 030 Accelerator uses this chip.) Keep in mind that even though an accelerator—or certain models of the Macintosh, for that matter—provides a 68030, you won't necessarily be able to take advantage of these features (see "Keeping Current" in this issue). For this reason many accelerators come with Virtual, a utility from Connectix that gives the Mac virtual memory capabilities even without System 7.0.

Faster Than a IIfx

Since its introduction, the Mac IIfx has been the computer against which all

other Macintosh models and accelerators are measured. The IIfx, however, uses a 68030 processor as does the Mac Ix, IICx, IIfx, IIsi, IIfx, and the SE/30. So how do you explain performance differences between these machines? Differences occur because the 68030 comes in different *clock speeds*. (Clock speeds are measured in megahertz.) The higher the clock speed, the more information the processor can handle at once.

In general, our test results show that an accelerator that uses a 40MHz 68030 (the processor found in the Mac IIfx) outperforms an accelerator that uses a 25MHz 68030 (found in the Mac IIfx). Of course, you pay for those extra hertz. For example, the 50MHz Siclone Si3050 lists for \$2499 while the 33MHz Siclone Si3033 costs \$1799—that's \$700 more for the faster accelerator.

Some vendors provide accelerators with a 50MHz 68030. However, this alone doesn't guarantee that a board will make a Mac faster than (or

Accelerator Advantages

Accelerators achieve faster performance in several ways. This diagram shows how an accelerator upgrade, such as the NewLife 33, provides key speed improvements to a standard Macintosh SE.

1 Faster Processor

The NewLife's 33MHz 68030 chip is faster than the SE's 8MHz 68000, partly because the 68030 uses a 32-bit data path (not 16-bit) and includes built-in 256K instruction and 256K data caches.

2 Math Coprocessor

Most accelerators offer an optional math coprocessor, either a Motorola 68881 or 68882, to speed floating-point operations. The NewLife 33 includes a 68882.

3 Static RAM Cache

Many accelerators include a high-speed static RAM cache to quicken the transfer of information between a fast processor and memory. This board uses 256K of 20ns static RAM.

4 Faster Memory

Many accelerators provide faster memory to keep pace with the addition of a faster processor. The 80ns RAM on the NewLife 33 displaces the slower 150ns RAM on the SE's logic board.

5 Copy ROM into RAM

Key routines from the ROM on the SE's logic board are loaded into the accelerator's RAM at start-up so that they are readily available.

6 RAM Disk

Many accelerators include software that lets you use the slower displaced RAM on the SE's board as a RAM disk.

even as fast as) a IIfx. In fact, only one of the 50MHz 68030 accelerators we tested—Siclone's 50MHz Intensifier ci—was faster than a Mac IIfx. When installed in a Mac IIfx, the Intensifier ci created the fastest Macintosh we have ever tested, displacing the Mac IIfx as the reigning speed champion. Like the Intensifier ci, the 50MHz DayStar PowerCache IIfx is a full-blown accelerator board that plugs into the Mac IIfx's PDS (processor direct slot). In our tests, however, the 50MHz PowerCache IIfx was not as fast as the Mac IIfx.

A Memory Divided

Upgrading a Mac with a faster processor, however, won't address the whole speed problem. That's because the Mac still needs to transfer data from the main memory on the logic board to the processor over a data path or bus. With a faster processor, the bus becomes the bottleneck in attaining ultimate speed.

One solution to the bottleneck problem is to add a small amount of superfast, 20 nanoseconds static RAM (SRAM) to the accelerator. This SRAM acts as a cache between the accelerator and the main system memory already on the Macintosh. Data from the main system memory is stored in the SRAM, where the processor can grab it with very little delay.

STEVE UNDERWOOD

For the Mac SE, a 25MHz 68030-based accelerator such as this one from NewLife Computer is the best value. The 16MHz or 20MHz boards are a bit cheaper but not nearly as fast. At the other end, 33MHz and 40MHz 68030 accelerators provide better performance than 25MHz boards, but at a premium cost.

Another common solution (especially on accelerators for the Plus and SE) is to place RAM directly on the accelerator board so that data transfers directly between the processor and the memory—bypassing the Mac's data bus completely. Unfortunately, you can't just take the standard RAM from the Mac's logic board and add it onto the accelerator. You need to match the faster processor with faster memory. For instance, the Plus, SE, and Classic use 150ns RAM, which is adequate for the 8MHz 68000 processor installed in these machines. If you upgrade one of these Macs with an accelerator that uses a 16MHz 68030 or faster processor, however,

the 150ns RAM becomes woefully inadequate. You need at least 120ns RAM with a 16MHz 68030.

Accelerators that add a 33MHz 68030 or a faster processor and that don't use an SRAM cache may ideally require extremely high-speed 50ns RAM. Unfortunately, these fast chips are in short supply and nearly impossible to come by. No vendor was able to supply us with 50ns RAM. The workaround the vendors offer is to delay the processor so that slower memory can synchronize with it. This period of delay is called a wait state; the number of wait states an accelerator has varies depending on how much time is required to synchronize

the processor with the RAM. For example, the 40MHz Gemini II from Total Systems requires four wait states to work with the 80ns RAM Total Systems sent us.

We found a performance degradation in products that compensate for slower-speed RAM by adding wait states. For instance, the 25MHz version of the Novy Quik30 requires 70ns RAM to run at one wait state, but the one we received came with 80ns RAM so we had to set the Quik30 at two wait states to synchronize the processor with memory. The MacProducts 25MHz 030 RailGun that we tested—essentially the same board as the 25MHz Quik30, since it was designed by Novy—came with 70ns RAM, and our test results show that it was more than 10 percent faster than the Novy board equipped with 80ns RAM.

Handling Math

Like students, accelerators vary in their aptitude for math. The Mac's processor is relatively inefficient at dealing with floating-point calculations (calculations involving decimal points). Floating-point calculations are most often used in CAD applications. They are also used in some spreadsheet calculations.

There are a couple of ways in which the Mac augments the floating-point deficiencies of its processor. The Plus, SE, and Classic rely on SANE (Standard Apple Numerics Environment) routines stored in ROM and in the System file to relieve the processor of the burden of calculating decimal-point numbers. A Mac can perform calculations faster, however, if you install a math coprocessor or floating-point unit (FPU), a special chip that is optimized for handling floating-point calculations. The Mac II comes with a 68881 FPU; the SE/30, IIx, IIcx, IIci, and IIfx come with a 68882 FPU.

Most accelerator vendors let you add an FPU to the accelerator board—an option that makes sense if you perform tasks that make abundant use of floating-point calculations. Generally speaking, the clock speed of the FPU should match the clock speed of

the microprocessor. So, for example, if you add a 40MHz 68030 accelerator to a Mac II, you should also replace the Mac II's 16MHz 68881 with a 40MHz 68882.

To take advantage of an FPU, all accelerator vendors include an option called a SANE trap, which routes all mathematical computations away from the SANE routines contained in ROM and to the math coprocessor. Although slower, SANE routines are more accurate than the hardware routines found in the math coprocessor. The math coprocessor is sufficiently precise for most applications, but certain specialized applications require the exactness of SANE. For this reason all vendors let you turn the accelerator's SANE traps on and off, usually via the Control Panel.

Installation Notes

Some dealers offer free installation if you purchase the board from them; other dealers charge from \$50 to \$100. Although a number of experienced Macintosh users have successfully installed accelerators, attempting to do so is inadvisable for a number of reasons. Performing your own installation exposes you to the risk of serious—even life-threatening—electrical shock, even when the Mac is

turned off. Many accelerators for the SE, and especially those for the Plus, are difficult to install because of the tight fit inside the case. The Mac Plus doesn't have a slot and wasn't designed for add-in products, so the accelerator attaches with a clip-on device that can be difficult to install and may present reliability problems if not attached correctly.

The interior of a Mac II is more accessible but you still have to be careful not to damage accelerator components. To install accelerators from Dove, DayStar, and Siclone you must first remove existing processor chips. DayStar provides a special tool (a PGA puller) to make this job easier. In general, the accelerators from these vendors include clear instructions and are relatively easy to install. Still, we can't warn you enough: if you opt to install these accelerators yourself, exercise extreme care when inserting the new adapter board into the sockets that once contained the original processor—otherwise you'll damage the new processor's pins, rendering the accelerator useless.

A couple of Mac models present installation hurdles that have deterred most vendors from producing accelerators for them. Newer SE/30s contain processors that have been sol-

Siclone's Intensifier ci (pictured) and DayStar's PowerCache IIci are full-blown 50MHz 68030-based accelerators that plug into the Mac IIci's PDS slot. In general, the Intensifier was faster than a Mac IIx in our speed tests, while the PowerCache was close to the IIx in performance.

dered on; only the Dove Marathon 030 works with these Macs. The processor in the majority of Mac IIcx's is also soldered on; only DayStar sells an accelerator for the IIcx. However, you must send the Mac to DayStar for the installation. The NewLife 25 and NewLife 33 can't be installed on older SEs because the extra video connector on these accelerators doesn't fit into the SE's case.

The accelerators we tested didn't have any compatibility problems. Most vendors have solved previously common problems with timing-dependent operations such as sound, AppleTalk, and formatting high-den-

sity floppy disks. In the event that one of these problems appears, most vendors let you turn the accelerator and its various features on and off to circumvent potential difficulties. Some Macintosh Plus and Macintosh SE accelerators permit the optional attachment of a large-screen monitor, but be sure that the accelerator you plan to purchase works with the monitor you have in mind; many combinations are incompatible.

Mac Plus and SE Recommendations

If you own a Mac Plus, it's not economically advisable to upgrade. To overcome the Plus's weak points, a

CACHE BOARDS

Cache boards are an appealing performance upgrade because they are inexpensive compared to accelerator boards. Cache boards fit into the IIci's processor direct slot and include from 32K to 128K of static RAM. This RAM acts as a high-speed cache; the IIci's microprocessor can access data and instructions more quickly from this cache than from the slower DRAM chips on the digital board. Bigger static RAM caches are not necessarily faster than small ones, since different boards use different information-handling techniques.

Cache boards for the IIci are available from companies such as Apple, Applied Engineering, DayStar, Micron, and UR Micro. PSI recently announced its 030 Bus Adapter Card for the IIsi, which provides a PDS slot for another board as well as a static RAM cache option. Macworld Lab tested two cache boards, the Micron Xceed and the UR Micro MacCache, to find out how much they speed up a IIci. We found that for a few hundred dollars, cache boards provide a IIci with about a 25 to 30 percent overall performance improvement.

prudent upgrade should include a more robust power supply and fan, not to mention a faster SCSI port. And vendors often charge extra for an installation kit for the Plus.

So, assuming you would spend about \$1000 or more to upgrade a Plus, and assuming you can sell it as is for \$600, you have at least \$1600 toward a better Mac. A brand-new Classic with a 40MB hard drive costs less than that, while giving you better performance and higher reliability. (The Classic contains fewer components and connectors than the Plus.)

Alternatively, you could purchase a used Mac II. It is not uncommon to find such a system for between \$2000 and \$2500. Calls to a few dealers uncovered a new LC with a color monitor and keyboard for less than \$2300. These models offer not only a major speed improvement over the Plus but also color, bigger screens, and the potential of upgrading to yet higher performance later.

Most of the vendors that provide Mac Plus accelerators also provide the same basic products for the SE. However, upgrading an SE with an accelerator is a more attractive option than upgrading a Plus, since you won't need to spend extra money on a SCSI port, a fan, or a power supply. For the improved performance, it's significantly less expensive to add an accel-

erator to an SE than to trade up. If you are on a tight budget I recommend shopping for the best deal on one of the 16MHz 68030 accelerator boards from MacProducts, Mobius, NewLife, or Novy. If you can spend a little more money, I recommend one of the 25MHz 68030 accelerators from MacProducts, NewLife, Novy, or Total Systems. For SE and Plus accelerators, 25MHz is the point of diminishing returns, where you get the best value for your money. The 33MHz and 40MHz 68030 accelerators provide another 10 to 20 percent performance improvement over the 25MHz boards, but at a premium cost.

Mac II Recommendations

If you own a Mac II or IIfx, and are a real speed maven, I recommend purchasing Apple's \$3000 Mac IIfx upgrade board. If you want the best price-to-performance ratio, however, I recommend any of the 25MHz or 33MHz accelerators from DayStar, Siclone, or Total Systems. These accelerators provide improved Mac II performance for between 30 percent and 50 percent less than the cost of a IIfx upgrade board.

The best value for the Mac II, however, is DayStar's 25MHz PowerCard 030. It boosts the speed of a Mac II up to the range of a IIci for \$1000 or so. At press time I was able to find

street prices under \$1000 for this accelerator without the FPU. If you're on a tight budget, the Dove Marathon 030 upgrade can freshen up the performance of a Mac II with roughly a 45 percent improvement for a street price typically under \$500.

You have few options if you want to accelerate a Mac IIfx. You can either buy an Apple IIci logic board upgrade or purchase a DayStar PowerCard 030 in one of three clock speeds: 25MHz, 40MHz, or 50MHz. Again, the 25MHz version is the best value. The higher-speed versions make less sense to me; since they approach the price of the Apple IIci upgrade board, you should consider buying the Apple upgrade and adding a static RAM cache board (see "Cache Boards"). Adding a 40MHz or 50MHz PowerCard 030 to a IIfx gives you a Mac that is somewhat faster and less expensive than a IIci configured with a cache board. If you opt for the Apple logic board upgrade, however, you can enhance IIci-level performance later with a cache accelerator like the Siclone Intensifier ci or the DayStar PowerCache. Personally, I don't find the options compelling enough to upgrade my IIfx yet.

This brings us to IIci accelerators—the most promising products we tested. Both Siclone's speedy Intensifier ci and DayStar's PowerCache IIci have begun to ship. At press time, Sigma announced a similar accelerator, the Bullet 3040, which provides a 40MHz 68030 accelerator with 32K static RAM cache and data compression for both the IIci and IIsi. Top-of-the-line performance is expensive, however. Thus, you should try to live with an unadorned static RAM cache board for at least the next year or so. By then prices for the IIci accelerator boards should have dropped.

If you have an SE or a Mac II, you don't have to feel like you've been left in the dust as newer and faster Macs are introduced. With the many good accelerators available you can get a sizable performance improvement at a reasonable price. And that's just the ticket for returning the luster to your trusty Macintosh. ■

See *Where to Buy*, under Accelerators, for contact information.

When it comes to Mac-to-PC connectivity, don't get caught on a one-way street.

Head straight for the complete Mac-to-PC connectivity solution — MacTOPS™ and DosTOPS™. Unlike most Mac-to-PC networks that only give you one-way file sharing, ours gives you true two-way file sharing. So your PCs never run into a dead end.

With Sitka's™ MacTOPS and DosTOPS, everyone on your network can share information directly with everyone else. For example, a Lotus 1-2-3 file created on a PC in Finance can be shared with any of the Macs or PCs in Marketing. With one-way file sharing, Finance must detour through a Mac server.

To avoid this detour, ask your dealer if the network you're about to purchase allows PCs — as well as Macs — to be both clients *and* servers. With MacTOPS and DosTOPS, your PCs are full-fledged

members of the network, enjoying the same advantages as your Macs. And you have the option of running at AppleTalk® or Ethernet speeds.

What's more, with MacTOPS and DosTOPS you get our InBox™ electronic mail system—free. So all of your Macs and PCs can send and receive messages.

Plus, MacTOPS and DosTOPS are backed by a complete family of networking products. Like SunTOPS™, which lets you connect Sun workstations with PCs and Macs. And you can be sure that all of your PCs—AT/XT, Micro Channel® or Toshiba—can be networked using our FlashCards™.

So take the quickest route to complete Mac-to-PC connectivity—with MacTOPS and DosTOPS. Call your nearest dealer today! Or call Sitka* at

1-800-445-TOPS, ext. 216 .

Because the best networking solution is always a two-way street.

SITKA™
TOPS in networking. And beyond.

* Formerly TOPS. We've changed our name, but we're still the makers of the same great products. Who says you can't teach an old dog new tricks?

Network your fax modem with BackFAX™/AppleTalk®

Faxing from every Macintosh® on your network is now as easy as sit, shake and fetch. Probably easier. Fact is, if you're sharing a laser printer, you can share a fax modem with BackFAX/AppleTalk.

It's as easy as 1, 2, 3. . .

1. Hook up any compatible* modem.
2. Install server software on one Mac and compile the user list.
3. Install workstation software on the other Macs.

That's it. Everyone on your network can fax from their Macs.

How does it work? Just open the FaxWriter™ DA, write the memo, select an address and SEND. Sending from within an application is even easier. OPTION - PRINT sends the document on its way, complete with original fonts and format. All you do is say where and when.

Network growing? That's not a problem. Simply add extra user packs whenever you're ready.

The size of your fax network is limited only by your server size and fax volume. In an average office this means about 25 users. If you have

any questions about your network, call us. Advice is always free.

The Solutions Guarantee

If BackFAX/AppleTalk doesn't perform as advertised within 90 days of purchase, we'll refund your money. Period.

Requirements: Mac Plus™ or larger, a minimum of 1MB RAM (2MB RAM minimum for the non-dedicated "fax server"), hard drives on all machines, an AppleTalk network, System 6.0.5 or later (even System 7.0), a compatible modem and one telephone line. Sendfax™ modems should only be networked in low activity LocalTalk™ networks and should not reside on an AppleShare® or a mail server.

For the name of a dealer near you and a FREE self-running interactive demo, fax us today at (802) 865-9224.

BackFAX/AppleTalk Starter Kit
(server software & a 5-user pack).....\$495.
Extra 5-user packs.....\$195.

Your LocalTalk is Congested. And so is your Ethernet Gateway.

Divide and Conquer.

Macintosh network performance problems can be divided into two key issues: LocalTalk congestion and gateway congestion. Conquer them separately and simultaneously with Webster's powerful, high-performance MultiPort Gateway.

Dividing your crowded LocalTalk into four independent networks conquers sluggish response times.

Dividing the gateway's workload between a DMA controller and the CPU allows each to conquer their specific tasks simultaneously. The DMA controller handles all data transfers. The CPU performs routing and protocol conversion between AppleTalk Phase 2 and TCP/IP.

Solve two problems at once with one powerful solution. Achieve higher LocalTalk performance and maintain maximum gateway throughput. For more information about Webster's MultiPort Gateway, call us at (800) 457-0903, or (408) 954-8054.

Macintosh Communications?

PacerTerm gives you the entire VT100/320 world, with fast and thorough emulation of TTY, VT102 and VT320.

It optimizes the Macintosh Communications Toolbox, with multiwindows, scrollbar, softkeys and keymappings.

PacerScript, our powerful HyperTalk scripting language, allows customization of host interface with Macintosh user dialogs.

You can transfer files quickly, with Xmodem, Zmodem, Kermit, FTP or our own PacerFT.

Complicated host sessions just got easier. Pull-down menus, click-on buttons and cut-and-paste functions help your Mac fully exploit the power of the host.

Our spectrum of network connections includes LAT, Serial, Modem, TCP/IP, Telnet and PacerCT.

PacerTerm icon

PacerTerm solves the puzzle!

We started with Apple's exciting new Macintosh® Communications Toolbox. We bundled in tools for LAT, TCP, and PacerLink connections, FTP and Kermit file transfers, and VT102 and VT320 terminal emulation.  Then we added power features like MiniWindows, Scrollback area, user-configurable SoftKeys and Keymappings, and HyperTalk®-compatible scripting with an integrated editor.  PacerTerm lets you create Macintosh front-ends for host applications as well as letting you access the myriad of on-line services, bulletin boards, and public-access networks. PacerTerm: The high-end front-end for Macintosh users everywhere.  For more information, contact your local dealer or call 619-454-0565.

Australopithecus

This bipedal homonid lacked the ability to remain erect for very long and relied exclusively on floppy disks – 800k was adequate storage for his limited cranial capacity.

Homo Erectus

The need to inventory large stone and rock collections using tapes drove this wayward creature to the brink of extinction.

Homo Sapien

Fortunately for modern men and women in business today – the DataPak MO from Mass Microsystems provides the most economical way to store and archive data and images of all sorts – whatever their cranial capacity.

Storage for Modern Times

When you think about it, just about everything has changed in the past million or so years. We humans are now increasingly more dependent on fast and reliable storage solutions to handle most of our every day business needs.

With the DataPak™ MO optical drive from MASS Microsystems™, you now have the one device that can handle the *critical* tasks of archiving and backup more efficiently and economically than ever before.

The DataPak MO is based on the idea that modern men and women require fast, reliable, removable and infinitely more expandable storage solutions than our less expansive ancestors. Not surprising when you consider their limited cranial capacity; and all the complexity that civilization has brought.

DataPak MO gives you the ability to quickly archive and backup all of your Macintosh® files, given that each removable DataCart™ MO cartridge provides 512MB of safe and reliable storage. All at pennies per megabyte! And with

the DataPak MO you no longer have to spend hours searching through slow tapes to access your files.

To get the complete story on how the DataPak MO has evolved as the most reliable storage on the market today, call to get the name of the dealer nearest you.

And now you can get more storage bang for your buck! DiskDoubler™, the data compression utility by Salient™, is now shipping with every DataPak MO.

REVIEWS

Word Processor

WORDPERFECT 2.0

Pros: Mac-like interface; styles can be shared across networks; powerful macro editor. **Cons:** Awkward transfer of Microsoft Word files; performance sluggish at times; only one level of undo.

Company: WordPerfect Corporation.

Requires: Mac Plus;

System 6.0.3. **List price:** \$495.

The release of WordPerfect 2.0 goes a long way toward eradicating many of the idiosyncrasies of WordPerfect 1.0. Gone is the Byzantine interface with its peculiar buttons and its sea of submenus (down from 18 to 13—which is still a lot, but now they tear off). The revamped interface is much more to Mac standards.

The new interface is apparent as soon as you call up the ruler. In version 1.0 the ruler contained only tab and alignment buttons. The ruler now contains six pull-down menus, which include the version 1.0 commands as well as column assignment (up to 22), line spacing, and magnification (from 25 percent to 800 percent).

New Features Galore

WordPerfect 1.0 had macros, but you couldn't edit them; now you can. The easiest way to use this feature is as a tape recorder to eliminate repetitive tasks, such as inserting the closing of a letter. There is even a 400-plus-page macro manual that accompanies WordPerfect 2.0.

In market-leader Microsoft Word and in other word processors, styles are tied to a particular document; so to copy a style from one document to another in Word you must use the Define Styles option to transfer the

style to your new document. In WordPerfect 2.0, styles can be made easily available (via a submenu) for any document you create—or for anyone else on your network.

The drawing layer includes color support; editable bezier curves; full rotation of text and graphics (PageMaker can't boast that); and the ability to place graphics within text, on top of text, and even behind text in the form of a watermark. WordPerfect imports graphics in PICT, GIF, TIFF, EPS, and paint formats. You can add one of 36 border styles and 64 border patterns to any amount of selected text.

All the tools function well, though bezier curve-editing functions are limited. And you can't place graphics with the freedom of a true page-layout program.

The text box feature lets you create sidebars, tables, and other ancillary text. Most of WordPerfect's features can be used to create these documents-within-documents.

When you move an object in most page-layout programs, markers in the ruler allow you to keep track of exactly where the pointer is in relation to margins and other page elements. WordPerfect 2.0 doesn't offer this feature, so positioning text boxes requires a bit of guesswork.

Rough Edges

Despite these impressive features, the rewriting of WordPerfect isn't perfect. The program's file-transfer capabilities are its most glaring imperfection. WordPerfect cannot transfer Word 4.0 documents directly. Instead, the Word file must be saved in RTF (Rich Text Format), opened in WordPerfect, and then, through the Save As function, saved to WordPerfect 2.0 format. According to the company, new Microsoft Word filters will be available in version 2.01.

Transfers between WordPerfect 2.0 and WordPerfect on the PC work fine. You can also transfer documents as text (ASCII) files.

WordPerfect's screen refresh is slow. There is a perceptible pause as lines wrap or move.

Selecting text with keyboard commands could be smoother. When you select a paragraph word-by-word, not only is the final word selected, but so are all the carriage returns and all the space to the margin. When you try to deselect, the penultimate word in the sentence is left highlighted as the other words become deselected.

WordPerfect lacks the ability to count the words in a selected block of text. Only full-document word counts are possible. You can perform a workaround using the spelling checker, which lists the number of words it has checked.

Some features available in version 1.0 are missing in version 2.0. The otherwise much-improved online help now lacks references to the corresponding page in the manual. And

Words and Pictures WordPerfect 2.0 adds a drawing layer to its powerful word processor. As shown here, text (and graphics) can be freely rotated, and polygon and bezier curve tools are available. Graphics can be imported in PICT, GIF, TIFF, EPS, and paint formats.

Mighty Macros WordPerfect 2.0 takes the mystery out of macro making. This macro inserts the current date, a salutation, and a closing to a letter and lets you add an address block, pausing between each operation. The numbers in parentheses define the location of the prompt boxes.

Undelete, which allowed three levels of undo, is also gone. With version 2.0's increased graphics-handling capabilities, multiple undos are a must.

All in all, this is a powerful word processor. WordPerfect is still not perfect, but it's so improved that there are undoubtedly people at Microsoft now looking over their shoulders with real concern, and for good reason.—**Philip Bishop**

See Where to Buy for contact information.

Paint Program

OASIS 1.0

Pros: Lightbox tracing feature; good control of pressure-sensitive brushes.

Cons: No zoom; no antialiased brushes; expensive. **Company:** Time Arts.

Requires: Mac II; 5MB of RAM; System 6.0.5; 32-bit QuickDraw; color or gray-scale monitor. Recommended: Wacom pressure-sensitive tablet; 24-bit color board. **List price:** \$795.

Painting by computer has always been somewhat of a compromise for artists accustomed to using paintbrushes. While there is a variety of paint software available on the Macintosh, the issue of simulating the subtleties of a paintbrush has always eluded even the finest paint programs. Oasis now offers these subtleties. (One bit of general advice: the more unique features of Oasis have been specifically designed to work with the Wacom pressure-sensitive tablet, so if you don't already own one, you might as well factor in the price of the tablet when you plan your software purchase.)

Different Strokes

The basic drawing tools found in Oasis, such as the primitive-shapes tools, the lines, polygons, eraser, and curve tool, all work as you would expect. The Artist and Effects brushes let you reasonably emulate various types of paintbrush strokes and paint styles—including wet and dry paint, pencil, chalk, pastels, and charcoal. These different styles are achieved by manipulating the "wetness" of the brush and the dispersion of the inner and outer edges of the brush stroke. The

program's documentation provides a good starting point with initial settings for different effects. You can control brush size, paint opacity, and color with stylus pressure. A gradient bar enables you to link different colors to specific pressure settings: as you press down on the stylus, the brush smoothly changes color. The Effects brushes also offer a variety of modes, such as smearing, smoothing, pushing, tinting, and more.

The color-palette window offers a straightforward approach to selecting and mixing colors. You can use a finger smearing tool and airbrush to apply and mix colors, or you can use an eyedropper to pick colors from an image window. You can toggle between different color models, including HSB (hue, saturation, brightness), RGB, and CMY (cyan, magenta, yellow). The color-palette window also contains the gradient bar: you drag color swatches onto the bar, and the program automatically creates the intermediate gradients (much like the gradient control in Electronic Arts' Studio/8 and Studio/32). Video artists will appreciate the video safe switch, which insures that a selected color falls within a specific saturation and brightness range. For example, if you attempt to increase a color's brightness, Oasis lowers the saturation value in order to achieve acceptable video output. If you have a Truevision NuVista or NuVista+ or a RasterOps 364 video frame grabber, you can digitize incoming video directly from within Oasis—a handy feature.

Special F/X

Oasis's special-effects filters are generally good. The filters include emboss, reveal (which works exactly like the reveal brush, except that it works on selected regions), sharp, soft, saturation, brightness, contrast, monochrome, video colors (decreases saturation of bright red and blue regions), and others. The overall filter interface is quite gratifying: you are presented with a miniature display of either the currently selected area or the entire image, before and after the chosen effect. As you use the parameter sliders, an approximation of the affected image appears in the dialog (*continues*)

Oasis Lightbox The Lightbox feature enables you to superimpose an active painting window on top of another image document. You can either use the background image as a tracing guide or selectively reveal the background in the foreground image.

Filter Interface Oasis's filter interface displays pre- and postprocessed images, letting you preview an effect without processing the entire selection.

box. Being able to see the changes allows you to experiment with different settings before committing to processing the entire selection or image. You can also specify the normal and special-effects image mix in this dialog box for each of the filters.

A unique Lightbox command lets you overlap one image window on top of another, with the underlying image showing through. You can use this feature to create a new image by tracing with the brushes without modifying the underlying image (you can also specify the degree of transparency of the foreground image window). Or you can use a reveal brush to paint the underlying image into the foreground image window.

Oasis's mask function protects selections from being affected by the brushes and filters. However, the mask can't be saved with the document, you can have only one mask at any time, and the mask is only 1 bit deep, which results in rather harsh edges. The harsh edges almost negate the value of this feature entirely.

Still Thirsty in the Desert

I found Oasis to contain a number of problems for the typical Mac artist. One of the drawbacks of the various brush tools is that the edges of the brushes aren't antialiased, something you would expect from a program of this genre. Another major problem is that there are no zoom controls—you are always working at a 1 to 1 ratio, which can be a real hassle when you're attempting to fine-tune detailed artwork. (According to the company, the next version will have zoom controls.)

There is no facility for rotating images, only for scaling them (through the standard marquee tool). Oasis is also a memory hog—unlike Photoshop or ColorStudio, it has no built-in virtual-memory scheme. While the program can run on a 5MB machine, you'll really need 8MB to do any substantial work, especially when using the Lightbox feature. I also found that a faster Mac II, such as an accelerated IIfx, is more desirable for maximizing the brush-stroke speed and minimizing lag time. Even with a Mac IIfx, I experienced a delay when using larger airbrushes.

At print time, Oasis doesn't allow you to have a lot of control over image output quality. There are no halftone or screen controls; you're basically stuck with the standard printer parameters that are part of each printer's driver. You'll find yourself exporting Oasis images into other programs for printing.

The program's documentation is fairly clean and simple, but lacking in meaningful technical data. The manual could also use some color.

Oasis's biggest drawback is its price: at \$795 this is an expensive paintbrush. If the program could better compete with packages such as Photoshop or ColorStudio, the price would be justified. As it stands, though, many Macintosh artists (specifically those who use a Wacom tablet) will find Oasis a useful addition to the capabilities of Photoshop or ColorStudio, but hard to justify at its current asking price. If you are mainly interested in re-creating real brush effects, Oasis is still worth a test run.

—David Biedny

File-Compression Utility

STUFFIT DELUXE 2.0

Pros: Desk accessory, Finder-menu, and QuickKeys versions included; Finder-like file manipulation within archives; myriad security, IBM-transformation, and scripting features. **Cons:** Installs 48 files on a hard drive; clutters System Folder; Deluxe archives can't be opened by Stuffit 1.5.1; somewhat confusing. **Company:** Aladdin Systems. **Requires:** Mac Plus; System 6.0.2; second disk drive. **List price:** \$99.95.

Stuffit was a shareware gem that worked like a trash compactor: it crunched down any file to consume less disk space. This ability to shrink files made Stuffit a hit with modem users, who, by sending files in compressed form, could cut down the time they spent online. The recipient would use Stuffit to expand the file to its normal, usable state. Because the program was simple and efficient, it became a standard for Macintosh file compression.

Stuffit Deluxe 2.0, the commercial, dramatically enhanced version of the old standby, has an impressive list of features, an ambitious open architecture, and an infinite future.

Sprawling Tendencies

For all but the power user, however, *impressive*, *ambitious*, and *infinite* aren't necessarily desirable qualities in a piece of software. Indeed, one reason for the original Stuffit's success was its simplicity: double-click and go.

Stuffit Deluxe, on the other hand, consists of 48 files and litters the System Folder with an incredible 7 folders. It doesn't clump its files into a single folder, like other support-file-heavy programs. (Aladdin protests that three of these folders are mandatory in System 7 anyway, but that's little consolation to those of us trying to keep our hard drives manageable.) The total package consumes nearly 1.5MB of disk space—over ten times as much as the original Stuffit. The Stuffit Deluxe Installer does let you specify elements of the installation to

The biggest computer news isn't just coming out of Apple. It's going into it.

MACIRMATRAC: THE MOST FLEXIBLE MAC TOKEN-RING BOARD

Despite the myriad of connectivity options that exist today, there's really only one decision to make. MacIRMatrac™ Token-Ring.

With our replaceable RIM technology, you'll never have to worry about buying another token-ring board.

With MacIRMatrac, Macintosh® users can handle many different growth possibilities today and in the future. This unmatched flexibility is the result of our replaceable ring interface module (RIM) technology that allows a single token-ring board to adapt in a variety of ways.

By offering 4 MBPS and 4/16

MBPS RIMs, and 4/16 fiber optic RIMs in the near future, MacIRMatrac is the ultimate solution to meet all your needs.

For instance, if your current cabling method is twisted pair, but you see a move to fiber optic in the future, you need only buy a new RIM to make the change.

And as newer technologies emerge, you can expect new RIMs which will let you migrate easily without purchasing a new board.

We offer the same technology in IRMatrac,™ our convertible PC Token-Ring board. In fact, the RIMs are interchangeable. Plus, you'll have a single source for purchasing, support, training, updates, and upgrades for your Mac, PC and PS/2® token-ring network.

DCA's MacIRMatrac supports all Macs with NuBus (Mac II) archi-

ture and it's fully compatible with AppleTalk®. And in combination with MacIRMA® WorkStation 3270 software, MacIRMatrac now allows you to connect to more SNA environments than with any other Mac-to-mainframe solution.

So now, with this flexibility, you can make the choices that are right for your business without sacrificing your initial investment.

For more information on MacIRMatrac and how to *receive your free token-ring board for a trial period* as part of our exciting Grand LANplan promotion, just call 1-800-348-DCA-1, ext. 68G*.

MacIRMatrac. Because what you get out of your Mac is only as good as what goes into it.

Circle 71 on reader service card

omit; unfortunately, if you don't install everything, later when you try to do something the program beeps and announces that it cannot find something it needs. The Installer desperately needs a Minimum Installation button, like the one in Apple's System Installer.

Feature Frenzy

If you've never worked with file-compression programs before, you have a lot to look forward to: gigantic TIFF files shrink to 5 percent of their original size. Most other files get compressed by half, making file-compression utilities great for maximizing hard disk space.

StuffIt Deluxe works the way StuffIt did: you create a container file called an *archive*, then select files you want to stuff into it. (Most people give the archive's name the .SIT suffix, indicating that it's been compressed with StuffIt.) Taking its cue from Microsoft Word, Deluxe lets you switch between Standard Menus, where the most technical commands are hidden, and Expert Menus . . . a great idea that could be carried further.

According to Aladdin, StuffIt Deluxe also has 70 other new features. Among the most useful: you can view the contents of multiple archives in different windows and drag stuffed files between them (see "Deluxe Interface"). There's more to Deluxe's Finder-like behavior, too. When you double-click on a stuffed folder in an archive, instead of unstuffing the entire folder (like the old StuffIt), the program opens a list of its contents that can be individually unstuffed. If an archive contains a text file or a PICT graphic, you can unstuff and view it without leaving StuffIt Deluxe. The program now allows you to select from a variety of different compression algorithms, each offering a different speed/compression ratio. (Unfortunately, their names aren't much of a selection guide. Your choices are Fast, Faster, Optimal, Best Guess, and Better.) The program's password-based security, virus detection, and IBM-file translators have all been enhanced.

For added security you can embed your signature into the archive. Unfortunately, you're forced to create your signature, using a MacPaint-type

Deluxe Interface In StuffIt Deluxe, every archive has its own window, and you can rename, delete, copy, sort, and move files between them just by dragging. A floating tool palette contains commands for most of these functions.

pencil, when you install the program—even if you have no intention of ever using this feature.

Extending the Metaphor

Of the new features, the cleverest are the extensions of the main program into other formats. For example, two desk accessories come with StuffIt Deluxe 2.0, StuffIt and UnStuffIt—yes, at last you can stuff stuff without exiting your word processor. There's also an INIT called Magic Menu, which puts a new menu on the Finder menu bar (à la DiskDoubler). Click on a file icon, choose Stuff or Unstuff—using the Magic Menu, you never have to encounter a dialog box. There's even an Extension for QuickKeys² that lets you stuff a specific file or folder as part of a macro.

StuffIt Deluxe 2.0 is faster than previous versions of StuffIt, and it's even generally faster than Compact Pro (Bill Goodman shareware). Even when compressing files for which it has special Optimizers (such as sound and text), however, Deluxe is still slower than DiskDoubler 3.1.2, which also produces smaller files in the bargain.

Of Visions and Versions

If StuffIt Deluxe is somewhat overblown, it's only because it was developed by a small, zealous, visionary company that earnestly wants to please everybody. You've never heard of technical support so good—I often found Aladdin reps answering the phone at ungodly hours; they maintain active and interesting folders on America Online, CompuServe, GEnie, and AppleLink; their updates, including version 2.0, have all been free; and they have exciting plans for integration with System 7.

The final example of Aladdin's

goodwill—and another example of the confusion it can create—is that they have released yet another program: the new, confusingly dubbed StuffIt Classic. This shareware version, also called StuffIt 1.6, shares the file format, virus checking, online help, and Finder-like archive structure of Deluxe. (It does not offer the Magic Menu, desk accessories, or other extensible features.) StuffIt Classic is available from user groups and online networks; if you do use it, you're asked to send \$25 to the company.

The upshot: there are *three* current versions of the program, and they're not mutually compatible. StuffIt Deluxe (commercial) and StuffIt Classic (shareware) are new and have the new file format. StuffIt 1.5.1 is the trusty old shareware edition—the real standard, gathered over the years by thousands of Macintosh users and reinforced by millions of online-service files.

In other words, in the interest of building a better program, Aladdin has had to abandon the standard that put StuffIt on the map; it will probably be years before the Deluxe/Classic format totally replaces the early version. Nonetheless, releasing a Deluxe-compatible shareware version was a generous and shrewd maneuver on Aladdin's part.

Compression Conclusions

The power-user features unique to StuffIt Deluxe include the Finder, DA, and QuickKeys extensions; scripting for automated selective backups; and translation of IBM-format Zip and Arc archives. If you require these features, rejoice; StuffIt Deluxe works precisely as advertised, is nicely priced, and is backed by a bright-eyed company.

If you're an ornery cuss like me, however, and resent having a humble utility dump a megabyte of clutter into your System Folder, get StuffIt Classic (1.6). It feels odd to recommend the shareware version over the commercial one, but for the casual user, Classic offers most of Deluxe's advantages without its sprawl. And hey—next time someone wants to create a new standard, how about making simplicity part of the formula?—David Pogue

Tired Of Being Held Up By Shady Characters?

Output from LaserWriter II NT, 300 dpi.

Output from LaserWriter II NT with Accel-a-Writer upgrade, 1200 x 300 dpi, 150 lpi with 26 gray levels

Now you don't have to buy a new printer to get ultra-fast, high-resolution output. The Accel-a-Writer™ LaserWriter® Upgrade instantly converts any Apple® LaserWriter to a higher-speed, higher-quality laser printer. It's the next best thing to owning your own typesetter.

Prints up to 20 times faster. With Accel-a-Writer's high-speed RISC technology, you can output text, graphics and complicated halftones up to 20 times faster — without shady edges and jagged lines. Plus our 3-level Advanced Memory Management puts your printer to work preparing a second document while your first one's still printing.

Works well with others. Accel-a-Writer is fully compatible with Adobe's® PostScript® page description language. It comes with 2MB of memory and expands to hold up to 16MB. What's more, our ISI technology lets you print from PCs and Macs simultaneously, without additional hookups or switch-

ing. All models feature AppleTalk, serial, parallel* and optional SCSI ports for maximum versatility.

Rewards you for trade-ins. Accel-a-Writer comes with a generous trade-in allowance that lets you lower your price even more when you send in the LaserWriter controller it replaces. And installation's simple. It just plugs inside your LaserWriter, with no special tools or service calls needed.

Call toll free. If you'd like to see how easy and affordable it is to upgrade your laser printer, call us toll free at 1-800-926-8839. We'll show you how to stop your laser printer from holding you up, and give you better resolution in the bargain.

*Centronics® parallel interfaces not available for the original LaserWriter and LaserWriter Plus printers.

★
Forecasting and Risk Analysis Software

CRYSTAL BALL 2.0

Pros: The only software defense against spreadsheet forecasting mistakes; easy to use; notably enlightened manual.

Cons: None. **Company:** Market Engineering Corporation. **Requires:** Mac Plus. **List price:** \$395.

The day after the first computer spreadsheet was sold, someone somewhere began using it to make a wildly unrealistic business projection. This was simply the microcomputer version of the "garbage in, garbage out" phenomenon demonstrated back in the days of punched cards and room-size mainframes. Desktop computers gave average citizens the ability to delude themselves with a thoroughness formerly possible only for large corporations. There is, fortunately, a statistical way to sort through the connection between your own assumptions, probable facts, and projected outcomes; and that way is delivered in easy-to-use form in Crystal Ball.

The Art of Seeing

When you try to play "what if" in a spreadsheet, you typically make up a calculation similar to a budget, with cells filled with estimates of materials costs, promotional expenses, salaries, revenues, and other expected financial items, to arrive at an educated guess for profits. In a more sophisticated version, you might make up high, low, and midrange values for all the items. But the fact is that all this makes for a remarkably error-prone way to make an important estimate.

Instead of entering single numbers as values in spreadsheet cells, a more realistic way to make estimates is to give cells all the possible values in a weighted distribution. For example, rather than use a single number for sales, a calculation should be performed over and over with values for sales taking on probable values from a statistical distribution. Furthermore, if all important values in a calculation are actually represented by distributions, you have the most realistic simulation of your actual pro-

spects that a computer can give you. The problem is, a standard spreadsheet can't do this kind of computation without dozens of pages of complicated macro programming. Crystal Ball is the solution to that problem.

Improving the View

To use Crystal Ball, you simply make up a basic spreadsheet computation representing the quantities in a projection as single values, then save the computation as a SYLK file (you can use any spreadsheet that saves files in SYLK format). When you open the spreadsheet in Crystal Ball, you can attach a distribution to any value in the projection. The Crystal Ball spreadsheet preserves formulas but can only substitute distributions for plain numbers, not formulas, in the original spreadsheet; the cells that display results computed with formulas (net present value computations and the like) will now show these results based on the distributions in the simple numeric cells.

To associate a distribution with a numeric value, you select the Define/Change Assumption command from the Cell menu, and pick the distribution you think corresponds to the real-world possibilities (see "Probable Suspects"). (The manual contains an easy-to-follow, comprehensive mini-course in distribution selection.) The ability to correctly select and tailor the distribution is what makes a Crystal Ball forecast statistically superior to the usual hit-or-miss spreadsheet methods. Because you are forced to pick a most likely distribution rather than simply entering your favorite number for a value, the chances of the pro-

gram generating a realistic forecast are greatly improved.

The actual projection uses the Monte Carlo technique, meaning that a random number generator produces values for each of the assumption cells during a series of tests, and gives numerical estimates in the cells you have identified as forecast cells. Monte Carlo methods are compact enough that the projection can run on a basic Mac; if you have more memory you can select Latin Hypercube sampling for faster results. Version 2.0 has improved on a basic Monte Carlo projection. You can select correlations between values if you think you have some valid correlation assumptions. If you think house sales go down as interest rates go up, you can call up a correlation dialog box that lets you set the correlation coefficient, and the program will warn you if this correlation conflicts with assumptions you made elsewhere. You can also now use trend charts to explore in detail the way your uncertainties in a project expand as you extend forecasts further into the future.

Version 2.0 includes a few new spreadsheet-handling and interface improvements. You can open multiple spreadsheets and linked spreadsheets, use cell references instead of numbers in SYLK models, work with standard date and time functions, and leave circular references in iterative calculations. Report output now can have borders, use bold and italic fonts, and display assumption distributions; statistics reporting now includes exact calculated results; and exported result files can include statistics as well as forecast values.

A Prediction

The first version of Crystal Ball provided a unique service to people who make forecasts and risk assessments; the second version offers a particularly refined and feature-rich implementation of this service. It's the only known cure for unrealistic spreadsheet financial projections, it provides a valuable education in practical statistics, and its cost is, to be blunt, negligible compared to the cost of the mistakes it can help you prevent.

—Charles Seiter

See Where to Buy for contact information.

Probable Suspects Crystal Ball gives you a wide range of distributions to use for values in assumption cells, and offers excellent advice on distribution selection. The Custom distribution lets you introduce market research and other real-world data to sharpen your projection.

Backup Programs

DISKFIT 2.0

Pros: Easy to use; can incrementally back up changed files only; reclaims floppy disk space. **Cons:** Poor tape support; limited file selection. **Company:** SuperMac Technology. **Requires:** Mac 512KE; System 6.0; hard drive. **List price:** \$99.95.

NETWORK DISKFIT 2.0

Pros: Retains and restores AppleShare folder privileges. **Cons:** Poor file selection; inadequate scheduling features. **Company:** SuperMac Technology. **Requires:** Mac 512KE; System 6.0; hard drive; AppleTalk or TOPS network. **List price:** \$395.

DiskFit 2.0 and Network DiskFit 2.0 are the latest upgrades to SuperMac's popular backup programs. They add some frequently requested features, reaffirming DiskFit's place as one of the best backup programs for users with smaller hard drives. Time, however, has passed Network DiskFit by.

Both programs create a SmartSet, which is a set of disks containing all the files or documents on the hard drive. SmartSets can consist of applications and system files only, documents only, or both. Unlike some other backup programs, DiskFit maintains files in normal Macintosh format so that you can easily restore a single file from a SmartSet floppy disk to the hard drive. If a file is larger than a floppy disk's capacity, DiskFit breaks up the file to fit on two or more floppy disks.

Incremental hard drive backups couldn't be easier. Start DiskFit, press return, insert your first SmartSet disk, and hit return again (see "Fast and Clean"). That's it. The program scans the hard drive, prompting you to insert only those floppy disks that contain files that have changed since the last backup. Files that have been removed from the hard drive are erased from the backup set, making room for more data. DiskFit places a backup

report in the System Folder that lists the folders and the floppies to which the files have been copied.

Although DiskFit is primarily intended for backing up to floppy disks, the program can handle any removable media that can be mounted on the desktop, including SyQuest, Bernoulli, and magneto-optical cartridges. DiskFit also backs up to some older DC-2000 tape drives, such as the discontinued SuperMac DataStream, but the process is slow. To access a tape drive on the Mac desktop takes a long, long time. Tape drive users are much better off using the software that comes with their drive, or Dantz Development's Retrospect.

DiskFit's included help feature is excellent. And the SuperMac technical-support people I spoke with (not toll-free) were knowledgeable, although I waited on hold for almost ten minutes. They also responded promptly to questions I sent on CompuServe and Connect.

What's New?

DiskFit now lets you select individual folders, although not individual files, for backup. You can exclude files from the backup set by type and creator. This exclusion feature needs to be refined; excluded file types are listed in a scrollable window, but DiskFit doesn't include the actual name of the excluded file type or application. The program also handles larger files than the previous version did; now you can back up files as large as 2 gigabytes. You can view and print the backup report from within DiskFit. And the new Subvolume feature lets you perform a duplicate backup to a folder on another hard drive. Unfortunately, you can't perform a SmartSet backup to a Subvolume, and you can only use the New Folder Selection feature with SmartSets, so Subvolume backups aren't as useful as they might be.

Delayed backups enable you to delay the start of a backup for a specified number of minutes. Most backup programs let you enter a particular time for the backup to begin. The delay feature for floppy disk backups is useless. This feature is mainly meant for tape users, but there are better programs for backing up to a tape drive.

Fast and Clean DiskFit has new features, but the main controls are still clean and uncluttered. After you start the program, it takes just two clicks on the mouse to start your backup.

Network DiskFit

Network DiskFit has much the same features as the single-user version, adding the ability to back up AppleShare or TOPS server volumes while retaining folder privileges. It also lets you back up a local hard drive to a folder on a remote volume. My speed tests showed that Network DiskFit provides acceptable backup speeds over AppleTalk to an AppleShare server, but the program still comes up short in today's network environment. No network administrator would attempt to back up a large network server to floppies; even SyQuest cartridges aren't sufficient. And the program's inadequate scheduling and unattended backup features rule it out. I recommend large-capacity (150MB and heavier) tape drives used with a superior backup program such as Dantz Development's Retrospect for server backups.

A Winner and a Loser

DiskFit has enjoyed a fine reputation for years for its reliability and ease of use. It's still a very good choice for users with hard drives as large as 40MB. A 40MB drive requires almost 30 high-density floppy disks for a complete backup. This is basically the realistic limit; more floppy disks, and you will require the patience of Job. If you have a medium-size hard drive (up to about 150MB) you can still use DiskFit well if you back up to a removable cartridge drive. But if you don't have a cartridge drive, a tape backup is a better choice for medium-size to large hard drives. And finally, network administrators should look elsewhere for their backup needs.

★
2-D/3-D CAD Program

MINICAD+ 3.0

Pros: Refined drawing features; relational database links to graphic elements; intelligent cursor adapts to drawing functions. **Cons:** Needs on-line help. **Company:** Graphsoft. **Requires:** Mac Plus; 2MB of RAM; hard drive. **List price:** \$795.

Although frequently overshadowed by Claris CAD and others, MiniCad+ is a features-for-price value leader in CAD programs. Version 2.0 integrated a spreadsheet, a macro language, and improved drafting and 3-D features. Version 3.0, demanding a higher price and more hardware, is now a direct competitor of such high-end offerings as AutoCAD. The MiniCad+ cursor performs more tricks than a performing poodle; the program's easy-to-use 3-D features have become easier still; a built-in relational database lets you associate all kinds of information with drawing objects; and a DXF translator (for communication with other CAD packages) is now part of the Import and Export commands.

By Design

The basis of MiniCad+ is its strong 2-D drawing section. It has all sorts of editable lines, fills, and arrowheads; splines (cubic and bezier) for curve construction; mirroring; hatching; and provision for creating arrays of circles and other elements. The program provides as many drawing layers as memory allows, user-defined symbol libraries, simple zooms in and out, a constraint palette, and a flexible auto-dimensioning system. If all these MiniCad+ features sound good to you—and they're competitive with most of the popular 2-D drafting programs—but you don't care a whit for 3-D, you might look at Graphsoft's 2-D-only product, Blueprint, a \$295 CAD program.

MiniCad+ 3.0's "smart cursor," a feature implemented to various extents in some other CAD programs as well (Ashlar Vellum, Claris CAD), changes its configuration as it passes over different parts of a drawing, in-

dicating snap points, midpoints and endpoints of lines, intersections, tangents, and parallels. In practice this saves drawing time by eliminating guesswork and faulty positionings. When you select a drawing tool—the rectangle tool, for example—the cursor becomes almost deliriously chatty, spewing out location information in a tiny text box. You can turn it back to a plain arrow cursor if you find all this conversation distracting.

Adding It Up

The smart cursor is an important addition, but MiniCad+ actually serves a different conceptual function than do pure drafting programs. Like comprehensive workstation CAD programs, MiniCad+ is an attempt to automate much of the after-the-drawing work that a real project entails. Real drawings result in orders for components, cost calculations, and lists of machining or construction tasks. Processing this information by hand can be more time-consuming than generating drawings in the first place. That's why version 2.0 featured an Excel-like spreadsheet linked directly to a drawing (spreadsheet cells can also be linked to drawing objects).

The relational database in version 3.0, in combination with the macro facility, is Graphsoft's solution to the problem of automating numeric and object data in a drawing. Objects in a drawing can be tagged, with any type of text or numeric data—the data for the currently selected object appears in a Data Palette. A drawing of an office layout, for example, can include prices, suppliers, catalog numbers,

All Over the Place The smart cursor implementation in MiniCad+ makes a tiny patch of screen a rich source of information. Here the cursor identifies sections of a rectangle; in another mode it changes shape to signal geometric information on lines and line-based structures.

and other information for all the furnishings and fixtures in the office. This information can then be searched. An architect might search for price as a criterion to identify stand-out cost items in the design. The real point of Graphsoft's grand design is that over time you buy or develop libraries of symbols, which have their own data palettes, and develop or buy third-party macros to automate assembly of the symbols into finished drawings. You then have a CAD system in which drawings can be generated, complete with parts lists, vendor sources, and other critical information, in a matter of hours. Graphsoft probably had something like this in mind when it included MiniPascal in the earlier versions (it's still there), but now mere mortals with drafting training can implement this futuristic vision using macros and the new database.

The Final Lines

MiniCad+ 3.0 might not yet be perfect, but Graphsoft is clearly trying. The program no longer runs on a 1MB Plus, but RAM is cheap (you'll be happier with 4MB than with the minimum 2MB). Drawing windows still lack scroll bars, and the menu bar still displays cryptic symbols, but these are quibbles. More serious annoyances are that you must buy all plotter support, and there's no online help (to be fair, a decent help file for a program like this would be huge). Finally, an obstacle to the full use of the program is that the manual is at many points more like a Pascal programmer's guide than a training document for people with a traditional drafting or even standard CAD background. With MiniCad+ 3.0 not only do you get everything *including* the kitchen sink, but you can define a reusable kitchen sink symbol, with its own linked data set of suppliers and prices. The catch is that some of the advanced functions are difficult to use if you don't have a programming background. Even so, with version 3.0, MiniCad+ has gone from very good to great as an advanced drafting program, and it offers lots of power beyond straight drafting to those willing to invest the learning time.

The power of creativity.

Multimedia presentation. Digital audio or video. Desktop publishing. Computer-aided design. Education. Networking.

No matter what you do, you're expressing your creativity through your Macintosh. So don't limit your capabilities – enhance them with a full range of powerful storage solutions from Microtech International.

The power of choice.

You can choose the perfect high performance solution from Microtech's line of award-winning products. The Nova Series of Microtech hard drives has it all – size, speed and reliability. Including up to 1GB of storage capacity, as low as 16ms access times and a five year limited warranty. And Microtech's R50 removable cartridge drive offers you the convenience of transportability.

Choose the endurance and stability of optical storage with Microtech's OR650 magneto-optical disk drive or the CD600 CD-ROM drive. Our T1200 tape backup unit provides a cost-effective way to store gigabytes of data off-line.

As a power user, you can count on Microtech to bring you the latest technology in memory solutions. Our 4MB and 16MB modules give your computer the power boost you're going to need with System 7.0.

The power of Microtech.

Power without dependability is no power at all. Since 1985, Microtech's *Commitment to Quality* has meant reliable products backed by the longest warranties in the industry. Our dedicated service and support team are winners of *Macworld Magazine's Service Hero Awards* and ensure your satisfaction – guaranteed.

When you need quality, performance, value and service, don't be misled by false promises. Only one name gives you the power. Microtech International.

★
Color Flatbed Scanner

MITSUBISHI SC-7500

Pros: 400-dpi resolution; 11-by-17-inch scan area; good registration of red, green, and blue color layers.

Cons: Expensive; poor image quality.

Company: Mitsubishi International. **Requires:** Mac II; 4MB of RAM; hard drive; 8-bit color board; color monitor. **List price:** SCSI version \$8950; GPIB version (without interface board) \$8450.

Most often the reviewer's job is a careful balancing act, a matter of weighing pros and cons and of making recommendations and qualifications. Sometimes, however, rendering judgment is easy. I can sum up my opinion of the Mitsubishi SC-7500 color scanner, for example, in three words: Don't buy one. The SC-7500 achieves the deadly distinction of combining the worst performance with the highest price in its class.

The SC-7500 is a 400-dots-per-inch, 24-bit color flatbed scanner with a scanning area that measures 11 by 17 inches. When this review was written, the scanner worked only with reflective art. According to the company, a transparency attachment with a projected price of \$950 was scheduled for release sometime in the second quarter of this year, however.

The SC-7500 is unique among Mac color flatbed scanners in that it is a true one-pass device. Like virtually all other Mac scanners, the SC-7500 produces a 24-bit file containing millions of colors by adding 8-bit (256-color) red, green, and blue files together. All other Mac flatbed scanners produce the red, green, and blue files using one light sensor, which captures light tinted by red, green, and blue filters or produced by three separate color bulbs. Some scanners make three separate passes, and some take three readings for every scan line as the sensor proceeds across an image.

In contrast, by using three light sensors—each of which has been altered so that it reads only one color of light—the Mitsubishi can read a full 24 bits of color simultaneously. One

might think that this would give the SC-7500 a speed advantage over its rivals, but actually the machine came in on the slow side in my speed tests. The one advantage of the three-sensor design is that scans produced by the SC-7500 are sharper than average because of excellent registration between the red, green, and blue layers. Slight misregistration of the color layers is common in Mac scanners, and can cause blurred edges and softened details.

Perfunctory Programs

The SC-7500 ships with two pieces of software: a ColorStudio module and a stand-alone program called SC-Scan. The ColorStudio plug-in enables users to access basic scanning functions from within Letraset's color image-editing package—which is *not* bundled with the scanner, in case you were wondering. SC-Scan provides more features than the ColorStudio module, and SC-Scan also enables users to avoid some of ColorStudio's limitations (for example, ColorStudio doesn't work with 1-bit black-and-white files at all, and 8-bit gray-scale files in the program take up as much memory as 24-bit color files). Either of the SC-7500's scan programs can

get the job done. Neither will be winning any prizes this year, however.

Both programs suffer from bad design decisions. For example, both programs offer only five settings for scan resolution. This limited field of choice means users will frequently have to either live with scans that take up more memory than is necessary or take the extra step of using a program like ColorStudio to eliminate the unwanted information. And none of the five resolution options corresponds to screen resolution—a frequently used setting in multimedia and other on-screen applications.

A worse failing of both programs is that neither warns you when you're about to begin a scan that requires more than the available disk space. This omission is particularly annoying in the case of the ColorStudio module, since whenever you lose, cancel, or complete a scan in that program—or simply close the scan module for a minute to do something else—the software throws away the prescan. (A prescan is a small, low-resolution scan used in most scan software to select an area of an image for final scanning.) Having to continually redo a prescan would be irritating with any scanner, *(continues)*

WESTI ASSOCIATES, INC.

Dark and Dirty As this comparison shows, the SC-7500 does a poor job capturing color. The image on the right is a conventional separation; the one on the left was color-corrected and separated in Photoshop and printed on an Agfa SelectSet.

but it turns out that the SC-7500 is the second-slowest prescanner in the Mac market, with each prescan taking a full minute and a half.

SC-Scan offers some relatively fancy features like controls for re-drawing gamma curves for on-the-fly brightness correction and the ability to save sets of scan parameters by name for later use. However, it doesn't have one of the basic requirements of a scanning program—the ability to resize an image during scanning. And the program has a generally clunky design that forces users to go through extra steps and to be conversant in unnecessarily techy terms like *xmin*, *ymax*, and *CLUTs*.

The Proof's in the Printouts

So-so software is an annoyance, but in itself it would never be enough to earn a scanner a thumbs-down rating. In the final analysis, a scanner lives or dies by the quality of the scans it makes. To put it bluntly, the Mitsubishi's scans look as bad as any I've seen.

What do you look for in a color scan? Well, one obvious thing is color. The color separations I had made of test photographs scanned with the SC-7500 came back looking very, very gray and colorless. The focus was sharp, as mentioned above, but the colors were extraordinarily murky and not at all pleasing (see "Dark and Dirty").

Numeric testing (in which I read color values off the screen using Adobe Photoshop's histogram) identified one reason, perhaps among many, for the Mitsubishi's poor color response. Tests with standardized red, green, and blue color swatches showed that the scanner has a difficult time seeing red. The red channel is contaminated by green at a higher level than that exhibited by any other Mac flatbed I've tested (see "Affordable Color Scanning," *Macworld*, June 1991). Overall, the scanner also has an unusually strong bias toward blue, but that tendency is easier to correct than the color "cross talk." If you're paying a premium for a 400-dpi scanner, my assumption is that you intend to scan for print separation. I have to say that, for this purpose, the Mitsubishi's results are unacceptable.

To sum up: the SC-7500 is slow, ugly, and inconvenient. That would be bad enough, but it also costs \$8950—over \$1000 more than its 400-dpi flatbed competitors, the Agfa Focus Color (\$7995—not including software) and the Howtek Scanmaster 3 (\$6995 plus \$1200 for GPIB board and Photo-shop). If you need 400 dpi (typically, if you'll be enlarging transparencies or other materials but can't make the 600-dpi price point of \$12,000), both these units provide good-quality scans. The Agfa has an 8¼-by-11¼-inch scan bed, so if you need an 11-by-17-inch bed, get the Howtek or, if 400 dpi isn't important to you, the 300-dpi Sharp JX-450 (\$5995).

Before buying any of those units, however, I'd check into two new models that were announced but unavailable at press time. The Fujitsu M3096 and the Prime Option Phovos 400C are both 400-dpi flatbeds, and both had a projected price of about \$6500. Much more like it, in my opinion.—**Joe Matazzoni**

See Where to Buy for contact information.

Handwritten Form Recognition Software

PAPER KEYBOARD 1.2

Pros: Handles check boxes well; under optimum conditions, saves time.
Cons: Crude interface; requires unnecessary programming; cryptic manual; unreliable import of TIFF files. **Requires:** Mac Plus; 2MB of RAM; System 6.0; Apple, Abaton, or HP ScanJet Plus or any flatbed scanner that generates TIFF files. Recommended: Sheet feeder.
Company: Datacap. **List price:** \$895.

Fast Times is a magazine for high-school students. To capture teenage tastes and trends, its editors wanted to take a nationwide opinion poll of its readers. The problem: how to process the 20,000 mailed-in responses. Typing each into a database would be impossibly tedious.

They discovered Paper Keyboard, a unique program that works in conjunction with a scanner to recognize handwritten responses on printed forms. For *Fast Times*, the solution was successful, because the magazine

The Paper Key During the Paper Keyboard recognition process, the scanned image appears in the background. In the foreground, the program flags letters it's uncertain of—in this case, the *E* in *Blue*—so you can approve or edit them. When you program the form, you specify a confidence level for each field; in other words, you get to specify how insecure the program has to be about a particular letter before it questions you for input.

hired Datacap to do the actual processing of the forms. Had the magazine's editors tried to work the program themselves, they might have discovered that Paper Keyboard is a wonderful concept whose implementation needs some work.

Designing in Formation

Paper Keyboard won't work with any old form—it only works with forms that have been designed with Paper Keyboard in mind. Using the special PostScript font provided, you create a form's blanks by typing a row of blank rectangles, or *dominos* (see "The Paper Key"). The font also includes check boxes for multiple-choice responses, as well as crosshair *anchors* to place in the corners of the form. When you scan a completed form, Paper Keyboard looks for these anchors to orient itself on the page. Dominos, check boxes, and anchors must be placed with white space around them according to Paper Keyboard's specifications, or the form-recognition process doesn't work.

Now you conduct a poll, survey, or questionnaire. This part is tricky, too. You have to persuade the participants to fill out the forms according to Paper Keyboard's rules. Respondents must write in a special block style, based on a model alphabet (which you should include on each form), drawing each letter (*continues*)

On MacAvenue, "Street Price" Means Great Value

We design **quality** into each one of our products and services. Then we set the MacAvenue street price so you get the best deal. And since our price always includes MacAvenue's support services and warranty, you not only get the best price, you get the best **value**.

Take a Better Look

We give you more options. Our own MacAvenue product line of hard drives, monochrome and color displays, modems and scanners gives you a value-priced alternative for Mac peripherals. For example, our hard drive is more than just another pretty case. Its metal interior and plastic exterior — designed like the Mac's — controls air flow and buffers the drive noise. When you work with the MacAvenue drive, all you hear is the sound of one hand clapping. But don't take our word for it. Ask Robert Wiggins, *MacUser's* longtime business columnist, who gives the Protegé drive his "highest recommendation."

Protegé Hard Drives

Capacity	External		Internal	
	Seagate	Quantum	Seagate	Quantum
20+MB	\$345	n/a	\$295	n/a
40+MB	\$395	n/a	\$325	n/a
50+MB	n/a	\$479	n/a	\$349
80+MB	\$525	n/a	\$465	n/a
100+MB	n/a	\$669	n/a	\$539
200+MB	n/a	\$979	n/a	\$899

The 15", ultra-high resolution screen of the Protegé features a complete 8 1/2" x 11" page with no reduction of image size or quality. Complete with video card, it's only \$495. Or get a 2-page view with the 20" Protegé Dual-page Display for a mere \$895. And each Protegé monitor comes complete with After Dark and Now Utilities software — **FREE!** For a second opinion, ask Bob LeVitus, author of *Dr. Macintosh*, who says, "I love the crisp, bright image I get with a Protegé Display. And with the 30-day, no-questions-asked, money-back guarantee, you just can't go wrong. I highly recommend the Protegé Display."

Three Great Reasons to Choose MacAvenue

1 30-Day Money-Back Guarantee
Every hardware product and every office accessory MacAvenue sells will give complete satisfaction. If not, return it in the original packaging within 30 days of purchase for a full refund. Consumable items, opened software, videotapes and shipping costs are not refundable.

2 Toll-Free Technical Support
If you experience a problem with anything you purchase from MacAvenue, call our product support staff at 800-766-6221 weekdays from 8:00 am to 7:00 pm, CST. We can usually resolve your technical problems over the phone.

3 Extended Limited Warranty
For up to 120 days after your purchase, MacAvenue will replace or repair (at our option and without cost to you) any product with which you are not completely satisfied. Call us for a Return Material Authorization (RMA) number. When you have the RMA number, ship the product to us, freight and insurance prepaid. We will pay the freight charges back to you (during the warranty period).

Today's powerful graphics programs require a color display, and MacAvenue offers a bargain on Seiko Trinitron displays, complete with video card. Our price will make you look twice at color.

No Guesswork

We take the guesswork out of choosing Macintosh peripherals and software. Our engineers carefully evaluate every product to make sure it performs to exacting standards. And if you do have a question about a product, you can make a toll-free call to our technical support staff. They'll usually have you up and running smoothly in a few minutes.

We Take Care Of You

We could go on and on about MacAvenue's top-notch services. But the bottom line is that you don't have to worry about buying your system hardware and software from MacAvenue — it's guaranteed.

MacAvenue Announces the End of the Scroll Bar

Constant scrolling or waiting for your screen image to refresh can take the creative joy out of graphic design. So MacAvenue rescues you from the creative doldrums with a larger and sharper image of your whole design. No scrolling.

Our Protegé Display systems are value leaders in large-format Macintosh displays. Sharp screen images, flicker-free refresh rates and convenient ergonomic features such as tilt/swivel base our displays are comparable to Apple and Radius products that can cost twice as much.

MacAvenue™

A Division of CompuAdd Corporation

around the dots in a domino. Paper Keyboard-style lettering looks fairly normal; only the shapes of the 6, 7, J, Q, R, and U are liable to take the form-fillers by surprise.

Pure Speculation

Before scanning the completed forms, you must describe the incoming images to Paper Keyboard by writing a *form spec*. This text file contains programmerese descriptions of every blank or box in the form, including the name of each field; the exact coordinates of each field's corners (in tenths of a millimeter); the length of the field (in characters); the data type (text, numbers, and so on). The process is staggeringly tedious if you're not already a programmer. It's a struggle to figure out the exact vertical and horizontal tenth-millimeter coordinates of every corner of every field, even using PageMaker's centimeter rulers option.

That you're condemned to programming this form spec is ridiculous—what's a computer for? The IBM version of Paper Keyboard will let you indicate the corners of each field simply by clicking; the program writes the form spec automatically.

Scan of Worms

Fortunately, Datacap's developers told me they're happy to help you compose the form spec—if need be, the company even writes it for you (using the IBM version, of course). "We're not going to let you fail," promises a spokesman. Indeed, after a day of frustration, I gave up and let the company write the form spec for me.

To test Paper Keyboard, I distributed a 1-page, 10-question survey to 30 random New York City residents from wide social, age, and ethnic ranges. As an incentive to fill out the form correctly, I gave each a dollar.

Unfortunately, you can scan directly into the program only if you have the Apple Scanner, the HP ScanJet Plus, or the Abaton flatbed. If you use another scanner, you have to save every page as a 1MB-plus TIFF file, which Paper Keyboard can then read. Correction: Can *sometimes* read; Datacap says that subtle variations in TIFF files may prevent Paper Keyboard from reading them. In my tests with a

Seiko scanner, Paper Keyboard choked on about a quarter of the TIFF files, indicating its displeasure by displaying the helpful error message "Tfrdstrp: read@906748 got 17want 1048576018."

Datacap warns, too, that to make the Paper Keyboard process worthwhile you really need a sheet feeder for the scanner. Imagine placing each of 20,000 *Fast Times* poll forms on the glass of a flatbed scanner—knowing that if a page isn't perfectly aligned, Paper Keyboard won't read it.

Top Form

If you've made it this far, you get to the good stuff: the recognition process. Paper Keyboard displays the scanned image of a form in a background window, whipping through field after field. The program reads the handwriting or the check boxes as easily as you or I, and sends the form's tab-delimited data into a text file you can later import to a database for analysis and printing. When it works flawlessly on the first attempt—as it did on 2 of my 30 test forms—it's a breathtaking glimpse of handwriting recognition's future.

If the program has any doubt about the contents of a field, it stops reading and presents a text-editing box, where you can either approve or edit its guess. Paper Keyboard is extremely smart about when to consult you. In every instance, you see immediately why it doesn't recognize a letter: somebody drew outside the domino or crossed something out, for example. You can probably guess the distinctions that it has trouble making: A/R, V/U, T/Y, and so on. As you sit and correct guesses, you wish you'd spent even more time telling participants the importance of careful lettering-around-the-dots. You are happy, however, that you only have to retype the questionable responses, while Paper Keyboard enters everything else.

A number of sloppy interface and programming quirks mar the recognition process, however. If the paper wasn't straight in the scanner—and therefore the program can't locate the anchor crosshairs—there's no way to adjust anything or help the program find the crosshairs; you simply have

to rescan the form. (That will be fixed in the IBM version, says Datacap.) If you edit one of Paper Keyboard's guesses and then change your mind, there's no way to go back and edit your mistake; you have to discard the good data along with the bad and, again, rescan the form.

The Future Isn't Now

If you meet the following conditions, the fledgling Paper Keyboard might be worth considering: You have one of the three supported scanner models, with a sheet feeder. You process enough forms to justify the considerable time, expense, and learning time. The people filling out the forms will take special care in printing any letters (check boxes, on the other hand, work like a charm, requiring much less care). And you're ready to spend long hours working with a poorly designed interface.

If that doesn't describe you, you'll have to wait for the intelligent form-spec version that Datacap promises will eventually appear.—David Pogue

Utility Collection

NOW UTILITIES 2.03

Pros: Wide variety of system enhancements; some elements competitive with top-of-the-line, single-purpose utilities; excellent value. **Cons:** Manual needs work; System 7.0 will make some elements redundant. **Company:** Now Software. **Requires:** Mac Plus; System 6.0.2. **List price:** \$129.

Now Utilities is a wide-ranging collection of system enhancements (most in the form of individual start-up documents, or INITs). In the August 1990 issue of *Macworld*, I compared version 1.0 to an all-in-one-box stereo system: it's functional, less expensive than buying the components separately, but even the best parts aren't anywhere near the top of the line. In response to criticisms such as these, and in recognition of the stiff competition from single-purpose utilities, Now Software has recently introduced Now Utilities (continues)

2.03, which replaces the collection's weakest elements—InstantAccess, MemorySetter, Persistence, and RearWindow—with four new utilities: FinderKeys, Super Boomerang, MultiMaster, and Screen Locker.

FinderKeys (like RearWindow) allows you to select, move, and copy files and folders in windows that are behind the currently active window—without deactivating the currently active window. FinderKeys also lets you select files or folders in Finder windows by name, open selected folders, and if MultiFinder is turned on, launch selected applications, all from the keyboard. But be forewarned: just as FinderKeys eclipsed RearWindow, System 7 will eclipse FinderKeys with its even more comprehensive set of Finder shortcuts.

Super Boomerang replaces InstantAccess and is in direct competition with Aladdin Software's Shortcut. Like Shortcut, Super Boomerang provides quick access to all mounted drives, partitions, and frequently used files and folders. Super Boomerang also creates new folders and searches for lost files—all within an Open or Save dialog box. Unlike Shortcut, which has one somewhat inconvenient menu with submenus, Super Boomerang divides its functions among six menus that are displayed across the top of the dialog box. More important, using Super Boomerang you can also rename, duplicate, and delete files within an Open or Save dialog box; specify a default folder for any application; add a submenu of frequently used files to most applications' File menus; and compress long file names so that more of the name is visible within the Open or Save dialog's scroll box.

MultiMaster, like Icom Simulations' On Cue and Software Innovations' HandOff II, enables you to launch files and applications or switch to another active application (when MultiFinder is running) from a pop-up menu or from a special menu in the menu bar. Unlike its competition, MultiMaster does not let you move between active applications with a single keystroke, but like HandOff II, it can set aside the windows of all but the active application to eliminate MultiFinder desktop clutter. Multi-

Memory Now Utilities' MultiMaster can show you how system and application partitions are organized under MultiFinder, and how memory is used within an individual partition.

Master can also be used to reset an application's MultiFinder partition size (a function formerly performed by MemorySetter) and analyze current memory usage (see "Memory").

Screen Locker, which is also available separately (for \$79), adds screen-saver and security functions that were not part of the original Now Utilities collection. With its handful of relatively static screen-saver options, Screen Locker doesn't hold a candle (or a flying toaster) to the colorful and justifiably popular After Dark (Berkeley Systems) or Pyro (Fifth Generation Systems). The security part of the program shuts off the screen saver and reinstates the main screen only if you enter the correct password. You can configure Screen Locker so that a password is also required at start-up, and you can specify a set of master passwords as insurance, should you forget the main password; Screen Locker also keeps a log of attempted entries. Screen Locker is, however, a very low-level security device—anyone who knows how to turn off an INIT can easily get past it.

A new version of Startup Manager—which allows you to select which INITs run at start-up and in what order, and create different INIT configurations for use on different occasions—fixes many of the old version's flaws. For one thing, Startup Manager no longer changes the names of INITs when you ask it to alter their loading order. For another, to help you locate problem INITs, Startup Manager now allows one-time-only changes to an existing INIT configuration at start-up. Startup Manager also ensures that INIT icons display properly at start-up (a function formerly performed by Persistence),

disables an INIT if it crashes during the previous start-up attempt, and provides a way—for those who know what they're doing—to reset the system heap size (a common need when large numbers of INITs are involved). Although it's not as classy or colorful as my favorite INIT utility, INITPicker (MicroSeeds Publishing), or as feature-laden as INIT Manager (Baseline Publishing), Startup Manager now gives both a run for their money.

Other parts of Now Utilities are more or less the same as in version 1.0: NowMenus adds submenus of desk accessory commands, Chooser choices, and Control Panel files to the Apple menu and adds pop-up menus to any application. DeskPicture replaces the desktop pattern with a black-and-white or color picture of your choice. AlarmsClock displays a digital clock and flashes previously recorded alarms in the menu bar. Print Previewer saves paper by displaying test documents on screen. Customizer, like the freeware program Layout (by Michael C. O'Connor), enables you to alter a variety of desktop characteristics, such as the arrangement of icons and the font used for file names. The WYSIWYG Menus utility displays each font in the Font menu in its own typeface, and groups all the fonts from one family. And Profiler creates a complete system-configuration report, which can be useful in diagnosing problems.

Altogether, Now Utilities 2.03 is a significant improvement over the original version. Although the manual is still rough sledding in places, Startup Manager, Super Boomerang, and MultiMaster can hold their own against the best, and the other elements of the collection are comprehensive in coverage and good enough for all but the most demanding Macintosh owners. With its new, lower price, Now Utilities makes it difficult to justify the expense of collecting a half-dozen or more single-purpose utilities. Anyone who doesn't already own some or all of the alternatives and finds system utilities such as these appealing (and who doesn't?) should find Now Utilities hard to resist.

—Robert C. Eckhardt

Asanté Designed Their 10BaseT Hub Realizing There Are Times When You Have To Be Flexible.

No one likes to be left out. And with the 10BaseT network hub from Asanté™, no one is.

The Asanté 10T Hub™ comes standard with all the right connections: twelve 10BaseT ports, plus one each for thick and thin Ethernet™. The media flexibility you need in any office.

Installation is easy, since the 10T Hub requires no special software.

Every hub ships with interchangeable back panels that allow you to connect using either RJ-45 jacks or a 50-pin connector.

And it ships with interchangeable back panels, so you can make your 10BaseT connections two ways: with simple RJ-45 plugs, or a 50-pin

All 14 ports on our hub may be connected simultaneously for maximum flexibility.

connector for a telephone system punch-down block.

The 10T Hub is just another example of networking leadership from Asanté, a company that brings you a full line of Ethernet cards for all Macintoshes. Like all Asanté products, our hub meets the IEEE Ethernet specifications and is compatible with all popular hardware and software. Reliability is guaranteed with our 5-year, hassle-free warranty.

Plug into the 10T Hub from Asanté. It will turn your office into one big happy family.

Asanté Technologies, Inc.
404 Tasman Dr., Sunnyvale, CA 94089

★
School Administration Software

MAC SCHOOL 3.0

Pros: Flexible; comprehensive; carefully designed. **Cons:** Requires heavy commitment in training and practice; uneven tech support.

Company: Chancery Software.

Requires: Mac Plus; 2MB of RAM; hard drive. **List price:** \$1950 to \$4200, depending on options.

 Mac School is by far the leading Macintosh school-management software package. It can automate, quite efficiently too, every current type of school record. The program is flexible and can be tailored to any special circumstances. It is also complete—Mac School has a module for everything, from library management to course grading to funds accounting.

As independent Mac School consultant Doug Boehme of Hilmar, California, points out, the correct relational-database structure for the records of a school or group of schools has more and trickier kinds of links than do the more familiar client-tracking or customer vertical-market databases.

A+ for Thoroughness

One basic single-user bundle (this cost \$2400 in early 1991, but price changes are expected) includes nine modules: Attendance, Report Cards, Marks, School Setup, Student Details, Report Manager, Teacher Details, Course Details, and Query. The modules are directed from the Mac School Shell, which acts as a sort of internal Multi-Finder for managing all the modules active at one time. The modules themselves have two main strengths. First, they show familiarity with the smallest details of school practice in North America (see "High Marks for Effort"). Second, Query and Report Manager let you extract, view, and present any information from any of the modules in any custom format.

Mac School has anticipated most of the reporting formats you are likely to want if you don't want to design your own. For example, the Report Cards module. Besides allowing for

virtually any grading details (do you want a B+ to count in the grade point average as 3.5 or 3.0?), the module lets the school set a complete range of criteria for honor roll status (no more than three tardies per semester? PE grades don't count? extra points for honors classes?). Most of the Mac School users interviewed for this review—Chancery provided a long list of references and a complete set of software for one suburban junior high school as a *Macworld* test site (and subsequent rich source of comments)—noted that with each release of Mac School (version 2.7 gave way to 3.0 as this review was written) the software's anticipation of their needs is impressively complete.

The other modules, which can be added to an existing basic Mac School setup under the Shell, are Scheduling, Library, Advance Booking, ASCII, Scanning, Guidance, and Health Records. There is an optional District Student Management program for processing records from several schools at a central district office, and a stand-alone modular accounting system called Funds Accounting. Each module makes characteristic demands and offers its own benefits. Scheduling, for example, makes all the student schedules for an entire high school. Using Scheduling for the first time can take longer than doing the same task by hand, but subsequent semester schedules can then be produced in hours. Library makes the school librarian's life a dream once it's set up. If a school already has extensive computerized records, the ASCII module allows the import of all types of record formats into Mac School.

Marks Class									
Mr. Rhodes Scholar		General	Special	Projects	Tests	Vouchers	Students	28	
Department Relations							Books	5	
Grade 12							Tests	14	
Section 1		50.0	0.0	0.0	0.0	0.0	Sum	100.0%	
8th percentage		27.9	0.0	0.0	0.0	0.0	Avg	28.8%	
Class average		50.0	0.0	0.0	0.0	0.0			
Percent of final mark									
Student names		Percent	Dist	Dist	Dist	Dist	Final	Grade	
Dylan Danielle		55.6	Dist	Dist	Dist	Dist	59.5		
Patterson Elaine		6.8	Dist	Dist	Dist	Dist	19.2		
Peters Travis		18.3	Dist	Dist	Dist	Dist	50.0		
Perrin Joanne		21.9	Dist	Dist	Dist	Dist	21.9		
Ramsey Colin		6.2	Dist	Dist	Dist	Dist	35.5

Reynolds Wendy		49.9	Dist	Dist	Dist	Dist	58.9		
Rice Tim		8.4	Dist	Dist	Dist	Dist	32.8		

High Marks for Effort The Marks module accommodates all sorts of grading schemes, with different ways to weight tests, homework, special assignments, and other tasks. As you would expect, the Marks module transfers grades and comments to Report Cards.

Doing Homework

Mac School offers the prospect of efficient record-keeping with potentially fewer administrative or clerical employees. This absolutely does not mean that you can mail a check to Chancery Software and make your school's problems go away. As an administrator at the test site noted, "Each complex module—Scheduling and Report Manager, for example—takes about as much effort to learn effectively as PageMaker." Schools that report the best success typically bought not just the on-site training (\$2400) for a staff group, but also in-house training at Chancery in Vancouver (approximately \$1600 each) for selected staffers who were then capable of training others. Another budget consideration is hardware. In principle you can run this system on Mac Pluses and link them with TOPS. In practice you need loaded SE/30s (the company recommends Classics), and a high-speed printer rather than an ImageWriter if you want to print 700 report cards at a time. All the references Chancery provided offered the same conclusion: if your school has the resources in money and staff time to get enough training, the investment pays for itself and works wonders. If you just buy the software and get minimal training, you'll have traded several thousand dollars for pretty meager results.

Report Card

Mac School gets very good marks for software quality, despite occasional minor mysteries (one school reported its ethnicity data on individual students scrambled in upgrading from 2.7 to 3.0, and Mac School's option-key codes don't match those of other Mac software). Chancery has also addressed the training issue with a variety of programs, none cheap but all first-rate. Customer support quality also fluctuates a bit: most sites report immediate and helpful answers to all questions, while a few complain of waiting days for calls to be returned. On balance, though, the report card is mostly A's. Chancery has done a superior job of understanding its customers' needs, and Mac School as a result is an outstanding product.

—Charles Seiter

VOYAGER 88™

As the industry standard for removable media, SyQuest has racked up a superb record of dependability, flexibility and convenience. It's the cost-effective way to add versatile storage capacity when you need it. And the good news just got better — twice as good, as a matter of fact. This new generation drive, the O·C·E·A·N Voyager88, has double the capacity, very fast access time, and certified increased reliability. It's built to rugged industrial specifications. And with a large capacity of 88MB per cartridge, it is perfect for extensive databases, color graphics or CAD/CAM/CAE. Just think of the convenience and security in having 88MB of data in one small, easy-to-carry cartridge. And best of all, the O·C·E·A·N Voyager88 is available now.

The Voyager88 is available in single or dual drive configuration. Each Voyager88 includes a 88MB cartridge and versatile Compass™ high performance software designed to format and enhance performance of virtually any type of drive. The Macintosh accessory kit also includes Central Point Software's MacTools Deluxe™ utilities. Voyager88 works with Macintosh, IBM, IBM-compatible and Hewlett-Packard computers using the SCSI interface.

★
Network-Management Software

GRACELAN 1.1.1

Pros: Collects data from both Macs and DOS computers; can synchronize clocks over network; logs printer activity; graphically displays topology of network; workstation owner can control what information is relayed to the manager. **Cons:** Can be slow gathering data on a large network; data must be exported to a database program to create reports; searches limited to one criterion. **Company:** Technology Works. **Requires:** Mac SE or Mac II; AppleTalk network. **List price:** 50 users \$395; additional 50 users \$195; unlimited users \$995.

This past year network managers have seen a dearth of programs that make their job easier (see "Managing Networks," *Macworld*, February 1991). Now a new tool called GraceLAN lets a manager determine who and what is on the network, as well as what software and hardware they're using, all with one program.

Query and Control

The GraceLAN application polls the network zone-by-zone to discover what devices are attached to the network. This includes Macs, LaserWriters, PCs, and other network devices such as routers and networked modems. The amount of detail about a particular workstation depends on what INIT is installed in that Mac. If Apple's Responder INIT is installed, the name (from the Chooser) and type of Mac will be displayed in GraceLAN's network map. If the GraceLAN Responder INIT is installed, the GraceLAN program obtains more information about that Mac, including system software versions, type of keyboard, NuBus boards installed, SCSI devices, monitors, INITs, and so on. (Limited information is presented by the DOS program that Technology Works provides for PCs using AppleTalk.)

Network management raises issues of user privacy. Should the network manager know everything (well, almost everything) about a network

user's Mac? How can the network manager provide user support if he or she doesn't know what's on each Mac? GraceLAN offers a reasonable solution to this dilemma—part of the GraceLAN security-level INIT is a cdev with which the user can restrict what's reported back to the GraceLAN application when it queries the user's Mac. The options are Name and Machine Type Only, System Info, All Info, and Make Changes. This last option isn't a report option—it's meant as a control for updating the GraceLAN Responder or synchronizing the Mac's clock to the manager's clock.

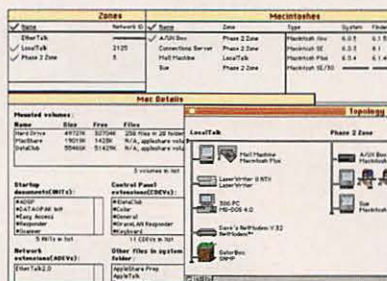

GraceLAN also offers an option for monitoring LaserWriter usage—as long as the GraceLAN administration program is running (even in the background) on the network manager's Macintosh, it can log the activity of selected printers on the network. The current version of GraceLAN creates a log that contains only the name of the user and the print job—it doesn't include other useful information such as time taken to print or the number of pages.

What to Do with It All?

It's often hard enough for a single user to keep track of what software is on the Mac. What's a network manager going to do when all this information is displayed on his or her screen? GraceLAN offers a few ways to select and present the data.

First, the manager can select network devices on an individual or zone-by-zone basis for viewing. To create a map of the network topology, you'd probably want to select all zones; on the other hand, you might only want the one or two zones that correspond to a particular department if, say, you're planning a software upgrade. Or, if you're trying to figure out why a particular Mac continually crashes with a particular INIT, you might select only that Mac for a detailed report.

Designated devices can be selected either from the network topology window or from the text window that lists those devices (there are four text windows—Macs, PCs, Printers, and Others). From any text window you can use GraceLAN's limited search capabilities to select a subset. For example, you can see only those Macs

It's All There This rather complicated screen shot displays GraceLAN's main windows. Across the top (left to right) are the Zones and Macintoshes windows. Check marks in front of a zone (or Mac) indicate items being scanned. The lower windows show the amount of detail GraceLAN can present. On the right is part of the network topology, showing a printer, 4 Macs, a DOS computer, a Net-Modem, and a GatorBox. The Mac Details window shows some of the information about the Mac named AUX Box.

that have System 6.0.5 or a later version. The search facility, however, does not support any Boolean logic to allow you to couple search criteria. You cannot ask to see all Mac SE/30s that have System 6.0.5 and AppleTalk version 49, for example.

You can print or export a copy of the information for future reference. GraceLAN comes with a FileMaker II template to make the compilation a bit easier.

Being There?

One difference between GraceLAN and other competing products (such as Status Mac from Pharos Technology) is its ability to collect system information from the Macs in real time. This can mean that you have to wait until all the Macs are turned on before you can get a full report, and it can mean that a user's work is disrupted while he or she waits for GraceLAN Responder to get the information and transmit it to the GraceLAN program. The GraceLAN Responder is fairly quick, but I did notice a slowdown on some older Macs when the data is being collected. In addition, on a large network, this can mean a lot of network traffic.

If there's some doubt about a report from a particular Mac or group of Macs, you can select them for rescanning (that is, querying them for a new report). Unfortunately, GraceLAN (continues)

The WACOM TABLET

With the cordless pen that writes like a brush.

"The better the tools, the better the artist." That's how one successful

artist explained it when asked why he believes a famous illustrator from an earlier time would have been even more creative with the Wacom Tablet.

It's certainly true for Mac artists today. For the Wacom Tablet brings the new dimension of **creative pressure** to computer graphics. With Wacom's pressure-sensitive pens, the harder you press, the thicker a line becomes. Or you can control the

color, density, or even "wetness" and dryout speed, depending on software.

Now you can use pressure with Adobe Photoshop, ColorStudio 1.1, Digital Darkroom 2.0, Easy Color Paint 2.0, Pixel Paint Professional 2.0, Studio/32, SuperPaint 2.0, Time Arts Oasis and more.

A Wacom pen is a joy for artists. It is ultralight (just 1/3 ounce as there are no batteries or magnets) and very natural and responsive since there's no cord to hinder your freedom.

Vector Drawing, Too. You don't need pressure to benefit from

using the Wacom Tablet. Numerous artists are discovering they can draw faster and more naturally with vector programs such as FreeHand and Illustrator as well as Fontographer.

Isn't it time you benefit from the Wacom Tablet.

Circle 116 on reader service card

doesn't provide an easy method for rescanning the network (or even a zone) to see if devices have joined or left the network. You have to deselect a zone (or zones) and then reselect that zone for a rescan.

GraceLAN should include an easier way to rescan a network, and it should add more-sophisticated search procedures (Boolean logic, for example) to round out some of its management options. Also, GraceLAN could increase the detail in its printer log (including the number of pages per print job, for example) and let users save a PICT file of the network topology.

★ Screen-Capture Desk Accessory

IMAGE GRABBER 2.0

Pros: Desk accessory format; simplest of all screen-capture utilities; Timed Grab captures screens other screen grabbers can't. **Cons:** Desk accessory format; can't save to Scrapbook; Help file needs copy-editing; inconvenient to capture menus.

Company: Sabastian Software.

Requires: Mac Plus. **List price:** \$49.

Press ⌘-shift-3, and any Mac in black-and-white mode takes a snapshot of the current screen image, saving it as a MacPaint file. Taking screen shots has always been useful to writers, manual authors, and training personnel. And magazines; you'll find screen shots all over *Macworld*.

Today, screen-capture utilities are far more convenient, because they let you specify what portion of the screen to capture. They also let you specify what format to save the image in: MacPaint, PICT, Clipboard, and so on. Joining the ranks of Exposure, Capture, ScreenShot, and other programs of this type is Image Grabber 2.0. Image Grabber, however, is a desk accessory, with its own advantages and drawbacks.

When you choose Image Grabber from the Apple menu, the pointer becomes the crosshair cursor. You drag across any part of the screen, creating a dotted-line rectangle. Any-

thing within the bounds of this rectangle is included in the screen shot. When you release the mouse button, a dialog box appears, letting you choose the new image's format or destination. For programmers, there's also an option to save the screen shot as a resource in a new or existing file. (It would be nice if Image Grabber could also send the image directly to the Scrapbook, as its competitors do, so you don't have to name and file every single shot.)

Because Image Grabber is a DA, there's nothing to clutter up the System Folder, nothing to set in the Control Panel, and no chance of conflicts with other INITs. The DA format also makes Image Grabber compatible with any Mac.

On the other hand, Image Grabber's desk accessory format makes it much more difficult to capture screen elements such as menus. With an INIT screen grabber, you can capture anything at any time, even with a menu displayed, because you can press the invocation keys even if the mouse button is down. Image Grabber's normal selection method is useless for capturing menus (and most dialog boxes, for that matter) because you have to use the mouse to choose Image Grabber.

All in Good Time

To handle these situations, Image Grabber has an option called the Timed Grab. This feature works like the Camera DA: you tell the program how long to wait before recording the screen image. So, to capture a menu, you tell Image Grabber to wait for five seconds; in that interval, you pull down the appropriate menu (see "Timing Is Everything"). At the fifth second, Timed Grab takes the shot.

The Timed Grab captures virtually anything on the screen, no matter how unruly or how irregularly written the program is. For example, Image Grabber succeeded in capturing the FlowFazer screen-saver utility. While FlowFazer is a dazzling program, its coding violates some Apple programming guidelines, making INIT-based screen-capture utilities unable to handle it. Prodigy doesn't play by the Mac's graphics rules, either; but Image Grabber captured the screen im-

Timing Is Everything Image Grabber's most interesting feature is its Timed Grab option. This dialog box appears when you press shift while choosing Image Grabber from the Apple menu, and it lets you specify the delay before the DA captures the entire screen image.

age where most INIT-type programs failed (although it crashed Prodigy in the process).

Unfortunately, the Timed Grab captures the entire screen image; you can't isolate a menu, a window, or a dialog box. Therefore you must use a graphics program to erase unwanted screen elements before you can use the screen shot. That's a lot of trouble just for a snapshot of a dialog box.

And while we're on the topic of inconvenience, Image Grabber's on-line help screens—in principle, a wonderful idea—need to be copy-edited or rewritten. Not only do they contain grammatical errors and some very awkward wording, but their text is distractingly riddled with TM and ® symbols—there's one at every occurrence of the word Macintosh, for example. (Legally, the TM symbol must appear only at the first occurrence of a trademarked name.) Sabastian plans to address the sloppiness, as well as the limitation of the Timed Grab, in version 3.0.

Shoot to Win

Image Grabber is certainly the easiest-to-use utility on the market, and probably the least expensive. Image Grabber is great for casual users (and programmers who'd find the resource-creation feature handy). Technical writers, manual authors, or desktop publishers, however, probably should opt for one of the more feature-laden INIT-style programs (or wait for Image Grabber 3.0), because of Image Grabber's inability to conveniently capture menus, modal windows, and dialog boxes.—David Pogue

See Where to Buy for contact information.

Since we know you're pressed for time, we'll skip the standard introduction and get straight to the point.

- Double Helix is the fastest multiuser relational database for

the Macintosh.[®] This, you should know, is not our personal assessment, but rather the conclusive results of MacUser magazine's June 1990 speed-test. And of the four top databases, in five key commands, Double Helix finished first. By considerable margins.

WELCOME TO THE WORLD'S

VERY FIRST MAC-BASED

CLIENT/ SERVER DATABASE.

- What makes Double Helix so fast?

Technically, it's because of our advanced client/server format. Unlike file servers, which slow your system down by shuffling copies around the network, client/server lets all users work directly off a master. This keeps network traffic down. And productivity up.

Client/server keeps everyone moving fast.

In addition to speed, client/server provides another crucial benefit: total referential integrity. In other words, when one user makes a change to the master, the whole network

gets updated—in real-time. On your screen. Right then and there. So everyone has the same data. And everyone's in sync. The end result: a group that's always working in one direction—forward.

- By the way, and for the record, we were the first ever to introduce a Mac-based client/server. And while it was revolutionary at its debut in 1986, it is, remarkably enough, still revolutionary today.

IMMEDIATE GRATIFICATION, RIGHT FROM THE START.

- Here is—and we quote—what MacWorld said in May 1990: "If you need a working database by Friday morning, and it's now Wednes-

day afternoon...your

best bet is Double Helix."

Talk about fast. With

Double Helix in hand

and no prior knowledge

at all, you can, in a matter of hours, mold

Double Helix to conform to your individual

needs. And as your needs change, so can,

with minimal effort, your applications.

Not just built for speed: "Double Helix is the most user-friendly database currently available." MacUser, June 1990

DOUBLE HELIX IS THE MOST

AFFORDABLE MULTIUSER

SYSTEM AVAILABLE. HONEST.

- How do we figure? For one, the

multiuser application is already included in every Double Helix box. And unlike other databases, it doesn't require any special file server software or hardware, saving you additional and quite substantial start-up costs. So with Double Helix, there's nothing more to buy. Nothing more to install. And nothing more affordable.

THE FASTER YOU GET GOING, THE FASTER YOU GET GOING.

- We've just spent the last 456 words talking about how fast and affordable Double Helix is. Now you can spend the next 14 numbers confirming it all for yourself. Call 1-800-323-5423, ext. 234 and we'll send you out a test flight demo and Quick Start instruction guide of your choice right away. After all, if you stayed with us this long, you've got no time to waste.

Double Helix

Now With Mirror's New Low Pricing, There's No Reason To Buy A No Name.

Some unfamiliar hard drives have popped up lately in the back pages of industry magazines. Most promise cut-rate prices, and quick delivery. Easy come, easy go.

Mirror believes a big part of what you buy in a Macintosh hard drive is a company that's going to be around longer than the warranty. One that's as dedicated to quality, service and support as it is to low prices.

And Mirror's been around almost as long as the Mac itself and doing better than ever. Last year was one of record sales and growth. Macintosh users have come to rely on us for quality products and superb service. Now you can purchase a Mirror drive for one additional reason...low price.

Now, thanks to higher volume and improvements in operating efficiency, Mirror is able to offer some of the most attractive drive prices found in any part of the book. We've done it without cutting corners and still back it with a complete 2-year warranty and a 30-day money back guarantee. So not only is owning a Mirror drive a safe buy, it's also now a very smart buy.

by Lawrence Stevens

This month I look at a forms generator, a utility for printing or displaying fonts, a résumé application, two games for children, and two other products

One Shot 1.0

One Shot (\$99.95 from Baseline Publishing), a forms generator, provides the tools to design invoices, report cards, receipts, and so on. It also has the spreadsheetlike ability to apply functions or formulas to any data-input fields you create, so that, for example, a field at the bottom of an invoice can automatically calculate and display the total of all purchases, or a column on a report card can display average test scores. To help you program forms, One Shot provides 150 mathematical and logical functions, almost as many as you'd find in a major Macintosh spreadsheet.

One Shot enables you to satisfy a wide range of functions using only the mouse. For example, you can enter formulas using an on-screen number pad, or have numbers appear with two places after the decimal point by pointing and clicking through pop-up menus.

One Shot is a desk accessory, so it runs even on 1MB Macs. Its forms-generating capabilities are easier to use and take less time to learn than those of Excel, Wingz, or Full Impact, and One Shot is less expensive and requires less RAM.

TypeChart 1.0

TypeChart (\$99.95 from Octavo Productions) provides an easy way to print or view charts of System fonts. The program displays a dialog box listing all installed fonts. You select the fonts you want to chart and then select one of the five chart types; for example, Headline shows the fonts in sample headlines in all sizes from 16 to 127 points; Text shows them in

sample paragraphs from 5 to 14 points; and Styles shows them in plain, bold, italic, bold italic, outline, shadow, condense, and underline.

The charts can be printed, displayed on screen, and shown in split-screen mode for making comparisons.

Of course, you could use a word processor to create a sample text document and format the document to show your typefaces in various sizes and styles, but that can be a time-consuming job.

Comparing Fonts One of the uses of Octavo's TypeChart is to compare fonts on screen. In this example, the screen splits into four windows, each displaying a different font.

ResumeMailer 1.01

ResumeMailer (\$49.95 from Individual Software) provides many of the tools needed for a successful job hunt. Its modules help you create résumés; draft and mail inquiry, cover, and thank-you letters; remember appointments; and keep a record of job-hunting activities. The program includes a calendar, a word processor (with a good spelling checker), a mail merge feature (easier to use than Microsoft Word's), and two unique modules that help you compose résumés and letters.

To use ResumeMailer, you select one of three types: Chronological, Functional, or Performance. Each type offers several formats; for example, Chronological has eight formats including Academic, Management, and Computer Professional. The program then asks for information such as experience, education, and hobbies. Once you have entered the information, the program automatically generates a professionally formatted résumé.

The letter module includes Broadcast (or inquiry), Cover, and Thank You letters. For each letter type you choose from stock paragraphs, which you can then personalize (see "Personalizing Letters").

digiMatic 1.0

Using a digitizer or digitizing tablet you can measure objects in a drawing by selecting points on an object with an input device such as a wand, stylus, or mouse. (The manual also suggests trying a Kurta tablet or Bit Pad Plus.) Architects use digitizers to scale blueprints; machinists, to measure parts in drawings; and students, to re-create a graph found in a journal. If you can scan the drawing you want to measure, digiMatic, a \$229 desk (continues)

accessory from FEB Software, can measure the on-screen image just as a real digitizer measures a drawing on paper.

digiMatic is easy to use. You click on two points in the drawing and indicate the scale. The program then creates a table containing the numeric values of the indicated points in either tab-delimited text or PICT format.

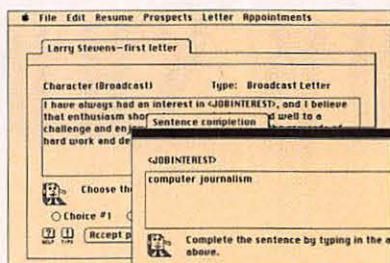

The manual does suggest two nonscanner methods of using digiMatic, but neither is entirely satisfactory. If you have a transparency of the drawing, you can tape it to the Mac screen and use the cursor, which should be visible behind the transparency, to click on the points you want to measure. Or place the drawing under the mouse and click when the edge of the mouse aligns with the points you want to measure. While I found the transparency method better than using the mouse as an input device, neither method is as precise as using digiMatic on screen. These methods might, however, be acceptable for applications that do not require absolute precision.

digiMatic is not only less expensive than a hardware digitizer, it works with all Macs, even with the older 1MB machines.

Enchanted Journey

Enchanted Journey (Jumping Frog Productions, \$39.95) provides six games intended for 5- to 12-year-olds, each based on an interesting scene such as a medieval castle, a haunted house, or a city street. There are three types of games: jigsaw puzzle, memory game, and find-the-object hunt (see "Puzzling Out a Medieval Scene"). After completing each game, children can manipulate many of its graphic elements (for example, they can reposition the medieval scene's jousting knights). Enchanted Journey is lavishly animated (the animations were made with MacroMind Director) and includes excellent sound.

I have two quibbles with Enchanted Journey, however. I would like a variety of games; for example, why couldn't there be a different game for each scene? Second, I think most children over 10 will find the games boring compared to the video games they are used to. But for the

Personalizing Letters To help you craft letters, ResumeMailer presents a number of stock paragraphs. Choose an appropriate one, via radio button, and the program displays phrases that you must personalize. In the above example, I replaced <JOBINTEREST> with the phrase "computer journalism" to personalize the final letter.

Puzzling Out a Medieval Scene You first select the number of puzzle pieces (8, 12, or 16). Enchanted Journey then lets you view the complete scene for 10 seconds, after which it displays a jumbled version. To win, you have to click on the square where the piece that's highlighted in the lower right corner ought to go.

Clothing Ensembles After you input some personal information, Manage Your Closet suggests purchases. You select Style, Color, and Price Point using pop-up menus (left). The fields in the middle show the items to buy. The boxes at the right list outfits that combine items.

younger set, Enchanted Journey is fun and offers practice in cognitive skills and hand-eye coordination.

Trick or Treat

Kindergartners through fourth graders, according to BES Software, can use this Halloween-theme game to practice arithmetic. Trick or Treat (\$39.95) uses graphics and ghostly sounds to entice kids to solve addi-

tion, subtraction, multiplication, and division problems (type of problem, time limit, and difficulty level are user-selectable). For each correct answer, the child's stash of trick-or-treat candy increases; for each missed answer, it decreases.

While Trick or Treat's graphics and sound initially attract, the game is somewhat repetitive. Used sparingly, Trick or Treat is an excellent complement to an arithmetic class, but the novelty soon wears off.

Real Estate Investment Analysis 7.0

Real Estate Investment Analysis (\$295 from RealData) provides complex Excel templates for analyzing real estate investment income. Taking current tax law into account, the templates help you determine cash flow and potential profit and loss on rental property. The advantage of this program is that it lets you enter a wide range of expenses and creative rental and loan options. It accepts percentage rent, for example, where the lessee (normally a retail outlet) pays a percentage of gross sales as rent. The program can also compare conventional mortgages, money notes, and rollovers.

Real Estate Investment Analysis is excellent for a real estate investor who owns commercial property or a number of apartment units. For owners with one or two income properties, I recommend the simpler and less expensive Excel templates in Real Estate Analysis (Heizer Software) or the real estate sections in Microsoft Excel Money Manager (Microsoft Press).

Manage Your Closet 1.0

Manage Your Closet (MYC) is a \$29.95 HyperCard stack from Woodbridge Information Solutions that helps you select clothing purchases, plan what to wear for the next 30 days, decide what to pack for a trip, and select clothing in your closet to discard. MYC stores data and offers clothing suggestions. You enter information about your body shape, coloring, clothes budget, and general style, and MYC makes purchase recommendations and generates charts of what to wear with what in your present wardrobe (see "Clothing Ensembles").

NEW PRODUCTS

Edited by Mary Margaret Lewis

This section covers Macintosh products formally announced but not yet evaluated by Macworld. All prices are suggested retail. Please call vendors for information on availability.

HARDWARE

84MB Removable Cartridge System

Removable cartridge system that formats to hold 84MB and uses a SyQuest drive mechanism. System has average access time of 20ms and is designed for backing up fixed hard drives or for storing or transporting large data files. System comes bundled with Retrospect Remote backup utility software. \$1795. MicroNet Technology, 714/837-6033.

84MB Removable Cartridge System

AVR Scanners

Gray-scale and color scanners that emulate the Apple Scanner for software compatibility. AVR 3000/GS Plus Greyscale Scanner can scan 256 levels of gray at 300 dpi and can be upgraded to a color scanner. AVR 3000/CL Plus is capable of scanning 16.8 million colors (in 24-bit color)

at 300 dpi, and scans an 8½-by-11-inch page in less than 1½ minutes. AVR 3000/GS Plus Greyscale Scanner \$2090; AVR 3000/CL Plus Color Scanner \$2590. Advanced Vision Research, 408/434-1115.

Cache-In

Compact cache board for the Mac IIci that, when installed, leaves room inside the IIci for a 5¼-inch hard drive. \$299. Applied Engineering, 214/241-0055.

Cache-In

FlexScan Low VLF Monitors

Series of color monitors that are compatible with the Macintosh II. Models 9080i and 9400i have intelligent controls that enable user to adjust the horizontal and vertical scanning frequencies to meet the requirements of specific applications. Can save frequency settings; monitors remember up to

FlexScan Low VLF Monitors

24 combinations. Model 9080i has 16-inch display; model 9400i has 20-inch display. Both models support 24-bit color. 9080i \$1929; 9400i \$3899. Nanao, 213/325-5202, 800/235-2202 outside California.

LaserScript LX

Six-pages-per-minute, 300-dpi, PostScript-compatible printer. Both Mac and IBM PC-compatible. One paper tray handles both letter- and legal-size paper; prints on labels, transparencies, stock paper, and envelopes. Comes with 2.5MB of memory that is expandable to 4.5MB. \$1995. Abaton, 415/683-2226.

LaserScript LX

PaintWriter Printer

180-dpi personal color ink-jet printer that comes with a QuickDraw printer driver designed for screen-to-printer color matching. Printer has throughput speed three times faster than that of the HP PaintJet printer. \$1395. Hewlett-Packard, 415/857-1501.

PaintWriter Printer

ViewFrame Spectra Projection Panel

Color liquid-crystal-display projection panel projects computer graphics and data when placed on a standard overhead projector. Active matrix LCD yields colors with high contrast to make the panel suitable for animation. \$5995. nView, 804/873-1354, 800/736-8439.

ViewFrame Spectra Projection Panel

Xante Accel-a-Writer

Printer-resident controller that lets user allocate memory to increase printer resolution and processing speed, and allow more virtual memory to download fonts. Available in three versions. Accel-a-Writer I upgrades the original LaserWriter and LaserWriter Plus; Accel-a-Writer II is for LaserWriter II printers, and Accel-a-Writer III upgrades the Personal LaserWriters SC and NT. \$2495. Xante Corporation, 205/990-8189.

SOFTWARE

4th Right

Collection of 80 external procedures that are designed to extend 4th Dimension's capabilities in (continues)

using AppleTalk, arrays, buttons, the Clipboard, variables, utilities, and windows, as well as its capabilities in creating strings and printing. 2MB min. memory. \$195. Digital Concepts, 503/244-4460.

All the Right Type

Classroom tool for teaching students computer keyboard skills. Designed for grades 4 through 12, and can also be used for adult classes. Program comes with practice session, or teachers can make up their own. Includes built-in word processor. 512K min. memory. Didatch Software, 604/299-4435, 800/665-0667.

The Book of MIDI

Interactive HyperCard stack providing an overview of MIDI, computers, synthesizers, and music,

The Book of MIDI

and describing how they relate. Does not require MIDI hardware. 1MB min. memory. \$39.95. Opcode Systems, 415/369-8131.

The Continuous Image Photometry System

Image-analysis and photometry system that is capable of processing multiple simultaneous images for use in applications such as animations. Creates a continuous video image composed of multiple full-screen frames, keeping all the segments to scale. Program uses image-enhancement functions such as

color filtration; RGB color identification; zoom; pan; overlay; subimage insertion; and automatic and manual feature recognition, modification, and measuring. System includes Video Frame Grabber software for a RasterOps board, but does not require a frame grabber board. 3MB min. memory. Application \$565; with interface for accepting user-written routines \$1835. Visionalysis, 401/624-9214.

ElseWare BarCode Kit

Bar-code utility for creating and printing industry-standard Postnet bar codes, postal FIM bars, Code 39 bar codes, UPC packaging symbols, and two of the five main shipping bar codes. Includes PostScript fonts that can be used with most database, page-layout, and word processing

programs. Includes ZipBars font, a HyperCard stack for creating Postnet bar code-EPS files, and ZipFix digit-calculating utility. Also has templates for MacWrite, Word, PageMaker, QuarkXPress, FreeHand, and Illustrator that indicate where to place Postnet bar codes and FIM bars on an envelope. 1MB min. memory. \$179.95. ElseWare, 206/547-9623.

Enchanted Journey

Animated software for children that includes six fantasy worlds complete with graphics, digitized sound, and mobile figures

Enchanted Journey

Pick a Macintosh.[®]

The complete PostScript[®] printer

No matter which Mac you pick, we've got a PostScript printer to go with it. Personal or shared.

Home office. Home run. Take the 6 ppm microLaser PS17. At only \$2,144*, it's ideal for home or professional use, giving you 17 Adobe[®] PostScript scalable fonts.

Plus it's only 13.4" wide and 14.2" deep —

a natural desktide companion for any Mac. In fact, *MACWORLD* says, "The likable little microLaser is the best all-around value."† **Company office. Great company.** For more power where power counts, there's the \$2,644* microLaser PS35 with 35 scalable fonts. *MacUser* calls it "The clear winner in the personal printer category.... It gives you

more bang for the buck and outperforms all its competitors in most performance tests."‡ **Shared office. Shared printer.** Now here's the right match for one Mac or many. In fact, the 16 ppm microLaser XL is a natural fit for an AppleTalk[®] network. And like its slightly smaller cousin, this workhorse printer offers you either 17 or 35 scalable fonts, priced at

for creating individual stories and scenes. The child enters the fantasies through one of three games (memory, hidden-object search, and puzzles); there the child can drag figures around the screen. Double-clicking starts one of the more than 100 animations that are hidden throughout the scenes. 1MB min. memory. \$39.95. Jumping Frog Productions, 801/451-0517, 800/523-3764.

FastTrack Resource

Resource-allocation tool for managing people, rooms, equipment, time, activities, and services. Creates resource reports that can be formatted as Gantt charts, histograms, resource tables, activity tables, or combinations of these. 1MB min. memory. \$235. AEC, 703/450-1980, 800/346-9413.

FastTrack Resource

The Geometer's Sketchpad

Tool for teaching geometry on the Mac. Designed to help teachers and students construct figures—from simple textbook figures to working models of the Pythagorean theorem—and to create perspective drawings, fractals, and animated sine waves. Includes text capabilities that enable students to title, label, and annotate their work. Uses on-screen recording feature to create scripts of

constructions, and can be used in conjunction with an overhead projector to illustrate classroom geometry lessons. 1MB min. memory. Single-user version \$169.95; ten-user lab pack \$399.95. Key Curriculum Press, 415/548-2304, 800/338-7638.

The Geometer's Sketchpad

GraphicsVu

Graphics filter that reads ANSI-standard graphics metafiles and displays any metafile images on screen.

GraphicsVu

Runs in color. Images can be saved to disk as PICT files and can be edited with draw or paint programs. 4MB min. memory. \$125. Perkland Associates, 215/889-1674.

Greek Practice

Language software that has been designed for use with text-book courses on biblical Greek. Program intended for beginning, intermediate, and advanced students of the Greek language. (continues)

Pick a microLaser.TM

family solution from Texas Instruments.

\$4,144* and \$4,644*, respectively. Mac and microLaser. The perfect pair. Whichever microLaser you pair with your Mac, there are bonuses microLaser offers that other printers can't. Like easy-to-use controls and upgrades you can do yourself — without tools or technicians. And because it's compatible with the Apple LaserWriter[®],

microLaser works like it was made for the Mac. Even when you use its multiple paper trays, because each microLaser comes with TI's Paper Tray Manager software.

Find out where you can pick the right microLaser for your Mac. Call 1-800-527-3500.

guage. Package comes with 15 HyperCard stacks that can be used as flash cards for vocabulary and grammar practice. Helps student review inflections as well as parts of speech. Written by Dale Russell Browne. 1MB min. memory. \$69.95. Duke University Press, 919/684-2173.

International Graphics Library CD-ROM

More than 200 CD ROM images for use in multimedia presentations and desktop publishing. Contains images of currency, stocks, dollar symbols, coins, and gold bars; maps and flags of numerous countries; outlines of the 50 states; the earth, as it looks from the moon; and images of United States presidents. Images are in 24-bit color TIFF, gray-scale TIFF, and other

formats. 2MB min. memory. \$299. Gazelle Technologies, 619/536-9999.

MacEDI

Software that provides a Mac interface to the Electronic Data Interchange (EDI) protocol. Takes files from 4th Dimension or Excel and translates them into the EDI format for transmission with communications software. 2MB min. memory. \$1950. Digit Software, 301/593-8952.

MacNumerics

Mathematics program designed for mathematics students at the high school and university levels. Includes 12 tools that cover basic requirements for calculus and other higher mathematics, beginning with graphs and points in the Cartesian coordinate plane, and continuing on

through integral and differential calculus. Program displays function graphs that depict roots, slopes, and areas. 1MB min. memory. \$189.95. Spring Branch, 319/927-6537.

Mac-To-Mac

File-transfer and text-conferencing software that consists of FileShare and TextPhone DA. Operates over AppleTalk network and enables users to send or retrieve any number of files in the background, and to initiate a two-way text conversation. Includes answering machine and message center capabilities. 1MB min. memory. 5-pack \$250; 10-pack \$350; 50-pack \$1500. Caravelle Networks, 613/596-2802.

Manage Your Closet

Software to keep track of your wardrobe; assist you

in planning what to wear; and advise you on which items might have been good buys, which should be worn more frequently, and which work well together. 1MB min. memory. \$29.95. Woodbridge Information Solutions, 415/424-9051, 800/522-5939.

MathCard

HyperCard-based mathematics program that is designed to assist children in learning to add, subtract, multiply, and use a calculator. Program uses a series of flash cards, a pop-up calculator, and aural and

MathCard

SuperANOVA

If you analyze data using general linear models (ANOVA, ANCOVA, MANOVA, MANCOVA or regression), you should be using SuperANOVA™. SuperANOVA is a revolutionary approach to data analysis, combining powerful statistics with full presentation graphing features.

Critics have been unanimous in their praise for SuperANOVA:

"If you work with statistics professionally, buy this program." —*Macworld*

"The interface is as elegant and intuitive as I have ever seen in a program of this complexity." —*MacUser*

"SuperANOVA has simply set a new standard for classical general linear models programs."

Sound interesting? Just call (800) 541-1261, Dept. Q60, for the name of your nearest Microsoft reseller. And change that mess on your desk into a masterpiece in the conference room.

Microsoft®
Making it all make sense®

visual feedback to teach fundamentals of mathematics. 1MB min. memory. \$14.95. Arch Cape Software, 301/680-8004.

MIDI TrackLog

HyperCard-based utility for musicians, composers, and musical arrangers. Provides inventory of keyboards, sound modules, controllers, and instruments used in creating and arranging a song. Organizes patches, cable and channel assignments, and track comments; produces centralized, user-updatable track reports for each song, sequence, or recorded cue. 2MB min. memory. \$39.95. Intervision Software Company, 714/534-6278, 714/530-4178.

Mr. File

Desk accessory alternative to the Finder that copies,

erases, and searches in the background, and performs standard disk-management operations. Lets user customize the way files are grouped regardless of which disks they reside on. 1MB min. memory. \$99. Softways, 408/978-9167.

NetMinder LocalTalk

LocalTalk network-analysis tool that includes packet decoding and packet collection using filters and triggers. Features include data capture, data analysis, and the ability to decode all AppleTalk protocols including ATP, RTMP, ADSP, ASP, PAP, NBP, MacIP, and Netway 1000. Packets can be selectively captured using filtering criteria such as protocol type, source and destination address, and protocol data. 2MB min. memory. \$395. Neon Software, 415/283-9771.

Personal Training for QuarkXPress 3.0

Five audiocassette- and disk-based tutorials for self-paced, interactive instruction for QuarkXPress 3.0 page-layout program. Each tutorial consists of 90-minute audiocassette, practice disk, and command summary card. Tutorials consist of Beginning QuarkXPress, Master Pages, Text Formats, Color & Type, and Tips & Techniques. 2MB min. memory. \$79.95. Personal Training Systems, 408/559-8635.

Professional Medical Practice Management

Series of four medical-practice-management modules: DC (Doctors of Chiropractic) Plus, MD (Medical Doctors) Plus, DO (Doctors of Osteopathy) Plus, and PT (Physical Therapists) Plus. Each

module is an integrated medical accounting system with specialized billing for the medical practice. Package generates a variety of reports, lets practitioner search database using a specialized set of criteria, and processes electronic claims for submission to insurance carriers. 2MB min. memory. Each module \$2995. Hamilton Computerized Business Solutions, 800/445-9918.

QPID

An office-automation and office-management program designed for client tracking, scheduling, time billing, and appointments. Generates quotations, invoices, and purchase orders; also produces user-defined reports, mailing labels, and graphs. Exports and imports data to and from word processors and

Impressive any way
you look at it.

spreadsheet applications to create mail merge documents, summary records, and sales lists. 1MB min. memory. Single copy \$695; five-pack \$2500. GT Omnicom, 416/365-1436.

Southwest Collection

EPS clip art collection containing eight volumes of illustrations representing southwestern themes. Includes borders, pottery and baskets, rugs and blankets, jewelry, kachina faces, garments, bead design. 1MB min. memory. \$129.95. Grafx Associates, 602/327-5885, 800/628-2149.

Southwest Collection

Svinga

Illustrated multimedia trek through the country of Zimbabwe. Contains more than 3000 pages of text plus over 1000 maps, pictures, and drawings. Includes information about Zimbabwe agriculture, animals, insects, birds, fish, arts, culture, economics, geography, history, towns, villages, and archaeological sites. Describes 75 national parks and safari areas. 1MB min. memory. \$99. CD-ROM Inc., 303/231-9373.

The Translator

English-to-Japanese language translator for the Mac. Translates 10,000 to 20,000 words per hour. Documents can be typed in or scanned with an optical character reader and imported using a Mac desk accessory. Translator's standard dictionary holds

25,000 words and can be customized. Program requires 20MB hard drive and the Japanese Kanji-Talk Operating System. 2MB min. memory. \$1799. Qualitas Trading Company, 415/848-8080.

Vette

Street racing game in which players drive one of four Corvette models through a simulation of the streets of San Francisco. Cars are maneuverable and are equipped with a rearview mirror so players can check for police. Game provides three levels of

Vette

difficulty. Players on two computers hooked via an AppleTalk network or using modems can play each other. 1MB min. memory. \$59.95. Spectrum Holobyte, 415/522-3584.

VideoClips

Application for recording, editing, and playing back live video sequences. Allows user to store and retrieve digitized video sequences. Frame rate, resolution, and size are user selectable. Video-capture rate, window size, and duration of a sequence are limited by hard drive capacity and throughput. 4MB min. memory. \$295. Workstation Technologies, 714/250-8983.

IT'S ABOUT TIME SOMEBODY PUT HARD DRIVES IN THEIR PLACE.

Not in front, on the side, over or under.

But all the way to the back (which is why we named this hard drive Bacster™). And it does have a tendency to go unnoticed.

What doesn't go unnoticed is the Quantum drive inside with effective access times as low as 8ms* and 50, 100 or 200 MB capacities.

There's also the free copy of Silverlining™ that comes with every La Cie drive. Silverlining is the #1 rated hard drive management program that gives you up to 30% more speed

than the competition.

And wait, there's more. A free copy of Norton Utilities® for the Macintosh® (A total software value of \$300).

Here's something bold and new. A two year limited warranty† unlike any other because it's renewable.

If anything goes wrong with your Bacster Quantum drive, call La Cie. We'll repair or replace it immediately, and renew the warranty for another two years.

And since La Cie is a Plus Development company (backed by \$400 million in assets), you can rest assured we'll outlast our warranty.

If that's not enough to convince you, maybe this will. Visa and Mastercard accepted. Volume discounts available. Free delivery. Call now.

- For Mac Plus & SE
- Free Silverlining and Norton Utilities

COLUMBUS WAS GIVEN \$14,000 TO DISCOVER THAT THE WORLD ISN'T **FLAT**. NEW ERA WILL GIVE YOU \$100 TO DISCOVER THIS FOR YOURSELF!

If Columbus had not made his historic journey, we might still be waiting to fall off the end of the earth. He realized that a Flat world made no sense at all ... so why continue living in one?

If you're still using a Flat file database, now is the time to step up to Relational power. And if you're uncertain as to the true limitations of a Flat file system ... try to imagine a Flat world! If you've already stepped up to Relational power, a new ship has entered the race. Introducing

nuBASETM **FOR THE MAC**
A Powerful Relational Database

Thanks to the Mac, Relational databases no longer require a team of programmers to create custom applications. And to prove it, we're making this offer:

Include any original database application disk with your order, and New Era will give you a \$100 rebate on nuBASE For The Mac.

Offer valid only through New Era Software

nuBASE allows you to create distinct relationships between independent files and records. Your files will actually communicate with one another. One entry can perform multiple tasks.

Create customized reports and entry screens that combine information from multiple files. So the next time you're studying your customer files trying to determine who's buying what, when, where, and how ... you'll know with the click of a mouse.

nuBASE utilizes the Mac's Graphical User Interface to display the relationships between files. So there is never a doubt as to how your files are communicating with one another.

Whether you are a novice user or an experienced programmer, nuBASE allows you to create powerful management systems quickly and easily. Pre-existing Application Templates offer a comprehensive understanding of the nuBASE advanced procedural language. You'll be designing custom applications in no time.

Whether your needs call for a simple mailing list, or a complex multi-file inventory and order management system, nuBASE is all you need to get your jobs done quickly and professionally.

For further details on how nuBASE can make your world go round, or to place an order, call 1-800-325-2604.

Quick Tips

NIXING THE LASERWRITER START-UP PAGE, PLUGGING IN ABROAD, TIME AND DATE STAMPS IN WINGZ FOOTERS, AND MORE

D

BY LON POOLE

id you ever wish you had another hand to press the shift key while clicking to select multiple objects in the Finder or a graphics program, or the ⌘ key while doing repeated copy-and-paste operations with the ⌘-C and ⌘-V shortcuts? Try

using the Sticky Keys feature of Apple's Easy Access software, which comes with the Macintosh system software. You install Easy Access by dragging its icon to the System Folder (with System 7, the Finder puts it in the Control Panels folder) and restarting. "Third Hand" explains how to use the Sticky Keys feature.

Unexpected Turn-on

I just bought a Mac IIci with 4MB of RAM, an 80MB hard drive, an Apple 13-inch color monitor, and a Datadesk Switchboard keyboard. I love the setup but lately I think gremlins inhabit my IIci. It frequently turns itself on, usually when I shut off the machine with the power switch after a bomb. Unplugging the keyboard doesn't help; I have to unplug the computer itself. My dealer has never heard of this. Any suggestions?

Mark Astmann

Ridgewood, New Jersey

Rotating the power switch while pressing it locks it in the on position. Apple put lockable switches on the IIci, IIcx, and IIxi so those models could be used as unattended file servers that would automatically restart after a power outage. Make sure the power switch is unlocked. After you press it to shut off your IIci, it should pop out completely and the notch in it should be horizontal.

Too Many Files Open

I have erratic problems printing from my Mac IIci, often getting the message "Error -42" or "Printer cannot be opened." I usually have Microsoft Word 4 open, along with Omnis 3 Plus, and use Apple's Print-Monitor software for background printing. Sometimes quitting Omnis 3 lets me print from Word 4. If that doesn't work, I try saving my Word documents, quitting Word, and then opening again. Other programs such as ReadySetGo 4.5 have similar printing problems. I don't seem to have trouble printing from an SE (upgraded with a 68030 accelerator), which is a TOPS server on the network.

The IIci has three partitions on its hard drive and one folder from the server. In addition to TOPS, the Mac has Tempo II, DiskExpress II, and Suitcase II. Can I avoid this problem? My Apple dealer is stumped.

H. Willy Chu

Dunn, North Carolina

Trying to open too many files at once causes the problems you describe. The Mac normally limits the number of files open concurrently to 40. That may seem like a lot, but everything you mentioned opens multiple files. Each open program means at least one open file. Each open Word document means two additional open files (one for the docu-

ment and one for a temporary work file). Omnis 3, like any relational database, opens several files. Every disk or server icon on your desktop counts, and so do all the suitcase files you have open. Small wonder the printing software can't open a new file in which to save page images for background printing. Unfortunately, very few application programs handle this increasingly common situation with any grace at all.

Fortunately, you can use Suitcase II (Fifth Generation Systems, 504/291-7221 or 800/873-4384) to modify your start-up disk to increase the files-open limit. Follow the instructions in the Suitcase II manual for increasing the number of open suitcase files; this has the effect of increasing the limit of open files. You can also increase the limit using the Set File Count utility that comes with MasterJuggler (ALSoft, 713/353-4090).

Traveling Mac

Your new book gives some useful information about using your Mac in other countries. For example, I

(continues)

THIRD HAND When you need a third hand to press one or more modifier keys— ⌘ , shift, option, or control—activate Sticky Keys. A symbol at the right end of the menu bar reports the Sticky Keys status (System 7 also gives you audio feedback). Here's what you'll see on screen when you (1) turn on Sticky Keys by pressing the shift key five times quickly; (2) press a modifier key you want held down, or press additional modifier keys and then a letter or number key (for a combination keystroke); (3) press a modifier key twice, with a slight pause between presses (to lock it down); (4) turn off Sticky Keys by pressing shift five times again.

didn't realize that both my LC and my monitor work at 220 volts, 50Hz with nothing more than an adapter plug. You also mention that I can get the transformer my ImageWriter I needs from Electronics Plus. Where is it?

Matthew A. Neuberg
Swarthmore, Pennsylvania

A True, the LC has an international power supply and so does Apple's 13-inch, 640-by-480 color monitor. However, the 12-inch, 512-by-384 color monitor commonly used with the LC requires 120 volts, 50Hz to 60Hz. To use the 12-inch color monitor with 220-volt power, you need a good-quality, grounded, isolation step-down transformer that changes 220/240 volts to 110/120. Other Apple equipment that requires a transformer: Mac 128, 512, Plus, and Classic; LaserWriter II series; and Personal LaserWriter series. Check the nameplate or owner's manual of each piece of equipment for acceptable voltage and frequency ranges (in hertz).

The transformer should be rated to handle the total wattage of all equipment you attach to it. If you use a cheap voltage converter, it will ruin your equipment. You may be able to find a transformer at a local electronics supply store, or you can order one from Electronics Plus (800/321-4524 or 415/457-0466). (At this writing, Radio Shack did not carry them.)

Also, take along a multioutlet power strip with surge protection. You'll have a tough time finding one after you leave the country.

LaserWriter Start-up Page

Q I've heard I can configure the LaserWriter so it does not print a start-up page every time it is turned on. How?

Bill Pope
Cambridge, Massachusetts

A You can turn the start-up page off (and on again) using the Widgets utility program, which is part of MockPackage Plus Utilities from CE Software (515/224-1995 or 800/523-7638). Also, a LaserWriter Font Utility program that lets you control the start-up page may be included with Apple's System 7 software package (it was distributed with prerelease versions); ask your Apple dealer.

Macintosh 101

Q I'd like to learn how the basics of Macintosh system hardware and system software are designed and how they interact. The level of complexity I desire is comparable to that of a *Macworld* feature article.

Roger F. Anderson, Jr.
Raleigh, North Carolina

A Read the book *Technical Introduction to the Macintosh Family* (Addison-Wesley, 1987). Although it doesn't cover the latest hardware and software developments, it clearly explains the concepts behind the Macintosh user interface and ties the concepts to the ROM toolbox. The book also clarifies Macintosh graphics, system software, files and volumes, memory management, operating system, resources, and hardware.

The book is aimed at experienced users and novice programmers. It doesn't assume you know how to

program or will ever want to. All special terms are carefully defined, making the book easy to read.

A Few Bytes More

TIP: Recently I needed to copy files to floppy disks, only to have the Finder tell me that "the file is too large" by 1K or some small amount. The floppies had seen some file shuffling, which can enlarge the desktop file, and I remembered that rebuilding the desktop file can free up some disk space. I tried it and it freed up enough space to copy the necessary files over.

Adam Frix
Columbus, Ohio

To rebuild the desktop file on a floppy, press ⌘ -option while inserting the disk. For a hard drive, keep pressing ⌘ -option during start-up until the Mac asks if you want to rebuild the desktop on that hard drive.—L.P.

Original Zero

TIP: Often I need to reset the zero point of PageMaker's rulers to its original position, after moving it to measure an object. (It seems like it would be a trivial addition to allow resetting the zero point by double-clicking the intersection of the rulers.) For a long time I would manually drag the zero point back there. Finally the secret was revealed to me. You simply choose Page Setup from the File menu, make no changes, and click OK.

Sterling Ledet
Powder Springs, Georgia

Quark Recovery

TIP: Since surviving the pain of document losses, I have discovered some methods for recovering QuarkXPress 3.0 documents. If a document freezes and precipitates a crash when you scroll or manipulate one of its pages, the document file is bad. Get around this by dragging its thumbnail-view pages into a new document with the same page setup. The master pages come along for the ride.

If you get a "Bad File Format" error when attempting to open a document, that document is history. You can recover most of the text with Microsoft Word's Open Any File command. [To get at that command, press the shift key while pulling down (continues)]

TIME AND DATE STAMP

Taxes, reorganizations, and "let's make one more small change in this spreadsheet before it goes to committee" are given in the corporate world. So how do you keep track of which one is the most recent version? Although most word processors feature easy time and date stamping in footers, spreadsheet developers generally seem to have considered it a low priority. Robert H. Blalock of DFW Airport, Texas, suggests this method for adding automatic updating to a Wingz page footer.

Sheet						
= "LCR 5-Year Plan—Branch 6330 &p"						
	AA	AB	AC	AD	AE	AF
1						
2						

1. Enter the spreadsheet name and the Wingz auto-page-numbering code, &p, into a cell (AA1 here).

Sheet				
=now()				
	AA	AB	AC	AD
1	LCR 5-Year Plan—Branch 6330 &p	33309.73		
2				

2. Enter the formula =now() in two other cells (AB1 and AC1 here).

Sheet				
=now()				
	AA	AB	AC	AD
1	LCR 5-Year Plan—Branch 6330 &p	03-12-91	05:37PM	
2				

3. Under the Number submenu of the Format menu, apply the MM-DD-YY format to the first cell (AB1 here) so it shows the date of the most recent change to the spreadsheet. Apply the HR:MN AM format to the second cell (AC1 here) so it shows the time of the most recent change.

Sheet				
=celltext(AA1)&" "&celltext(AB1)&" "&celltext(AC1)				
	AA	AB	AC	AD
1	LCR 5-Year Plan—Branch 6330 &p	03-12-91	05:40PM	
2	LCR 5-Year Plan—Branch 6330 &p	03-12-91	05:40PM	

4. Combine the contents of the three cells as text in a fourth cell (AA2 here) using the celltext() function and the concatenation operator. Make that cell the footer by selecting it and choosing Report Footer Range and then Report Footer Right (or another of the footer alignment commands) from the Report submenu of the Sheet menu. Then choose the font, size, style, and other attributes for the footer from the submenus of the Format menu.

LCR 5-Year Plan—Branch 6330 1 03-12-91 05:40PM				
--	--	--	--	--

5. This is how your finished page footer should look.

'Til Death Do You Part.

In an unprecedented move, Key Tronic Corporation introduces the first limited "lifetime warranty" for our new MacPro Plus™ keyboard!

We're so sure of the reliability, so proud of the quality and so committed to customer satisfaction that we've decided to put our product on the ultimate line. If your MacPro Plus should quit working before you do — and it's our fault — we will repair or replace it. Free!*

Warranties are important — but so are product features. The MacPro Plus is compatible with all Macintosh® computers. The

105-key layout offers productivity features such as interchangeable Caps Lock and Ctrl keys, period/comma lock capability, adjustable key feel and dual legend keycaps to provide easier, more efficient use of your Mac.

If that's not reason enough to use a MacPro Plus, we'll throw in a free copy of Tempo II™, a macro package from Affinity Microsystems (\$149.00 suggested retail price), and the connecting cable you need for your Mac (\$14.95 suggested retail price), just for the asking. This means you get a \$368 value in a

\$179.00 keyboard, plus a warranty against manufacturer defects that lasts a lifetime.

All you have to do is ask for the Key Tronic® MacPro Plus — the first and last word in keyboard performance, value and reliability!

Call us for more information at 1-800-262-6006. In Canada, call 1-800-348-6006 or outside the U.S.A. call 509-927-5515.

*So long as the original purchaser owns the product. Some additional conditions apply. See full text of warranty.

 **Key Tronic®**

Circle 289 on reader service card

NO ONE HAS TO KNOW YOU DID ALL THIS MINUTES BEFORE THE MEETING.

The meeting is in an hour. And your presentation is the main event. It's in your head, but not on paper—much less on overheads. It's important to communicate professionally and persuasively, but there's not enough time to prepare. Or is there?

Persuasion: first choice for last minute.

Aldus® Persuasion™ 2.0 is the fastest way to create impressive visuals for all your meetings. In fact, all the overheads above were created in just 30 minutes. That's productivity no other

method or Macintosh® program can beat—and test results prove it.

Simply type text into Aldus Persuasion's outliner, and your visuals are automatically formatted. Persuasion 2.0 is a complete solution for creating organization charts, diagrams, and a variety of graphs, with features like 36 pre-designed templates, spell-checking, and a

library of clip art. So all you provide is the content—Persuasion does the rest.

And when you're ready to print, choose from output options to suit

your needs: black-and-white or color overheads, or 35mm slides from a film recorder or nationwide service bureaus.

Of Persuasion's many accolades, *MacWeek* summed it up best: "...the best presentation package available."

Need more persuasion? Call **800-333-2538, Department 2D3**, for free literature or a \$4.95 demo disk.* Because with Aldus Persuasion 2.0, your presentations will look like you spent days, not minutes. And we'll never tell.

In a recent performance test, Persuasion outpaced other Macintosh programs.

The Creative Edge in Business.

Getting Started with System 7

A HANDS-ON LOOK AT SOME OF SYSTEM 7'S MOST POWERFUL NEW FEATURES

BY JIM HEID

If you've read "Confessions of a System 7 User" in this issue, you have a good idea of why everyone is talking about the latest update to the Mac's fundamental system software. Never before has the Mac's system software offered so much to

such a wide range of users. Novices will appreciate System 7's balloon help and the way System 7 simplifies many of the technicalities that have made the Mac more complex in recent years. Mac veterans will adore System 7's vastly improved Finder, its built-in file-sharing, and its interapplication communication (IAC)—its ability to allow programs to exchange data automatically.

So where do you start? First, get the upgrade package (and its first-rate manuals) from your Apple dealer. Use the Before You Install disk for an intro to System 7's key enhancements. Then scan the hard drive with the BYI disk's compatibility checker—an electronic reconnaissance squad that searches the hard drive for anything that might have problems coexisting with System 7. I discovered remarkably few incompatibilities when working with prerelease versions of System 7, and chances are

your experiences will be as favorable. But use the BYI disk to be sure.

If the compatibility checker reports no serious problems, install the System 7 software. Then sit down at the Mac and continue reading for a hands-on look at some of System 7's hottest new features.

Doing More at Once

In my January 1991 column ("Getting Started with Mac Operating Tech-

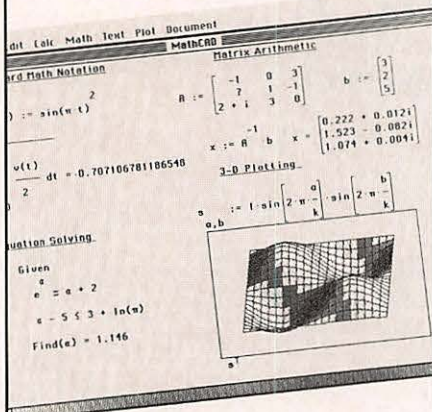

niques"), I briefly covered the benefits of *MultiFinder*, which lets you run two or more programs at the same time and switch between them with a mouse click. *MultiFinder* also lets time-consuming operations such as printing take place *in the back-*

ground while you work, and it makes managing disks and files easier, since you don't have to quit a program to get to the desktop. However, many Macintosh users have avoided *MultiFinder*'s multitasking benefits, primarily because 1MB Macs lack sufficient free memory to run more than one program at once. Even a 2MB Mac is taxed by complex programs like *PageMaker 4.0*.

With System 7, multitasking isn't just a good idea—it's the law. You no longer have the option of using the one-program-at-a-time Finder. That's one reason why System 7 requires a minimum of 2MB of RAM. If you find yourself cramped with 2MB now, you'll quickly want more after upgrading to System 7.

You can get a feel for the benefits of multitasking by starting a couple of programs and switching between them using the *application menu* (at the right edge of the menu bar) or (*continues*)

Technical calculations made easy!

Perform engineering and scientific calculations faster... and with fewer errors.

- **Mathcad 2.0 does your numerical analyses quickly, easily... and inexpensively!** The live document interface™ lets you integrate equations, text, and graphics on your computer screen. You can see what you solve and update your equations and graphs with a single keystroke.
- **You do the thinking while Mathcad does the work.** Mathcad picks up where calculators and spreadsheets leave off. With over 120 commonly-used functions built-in, Mathcad can handle your formulas, exponentials, differentials, cubic splines, FFTs, and matrices.
- **Applications Packs customize Mathcad to your work.** Ten different packs are available for electrical, mechanical, civil, and chemical engineering, and other technical applications.
- **Mathcad works on your Macintosh, PC, or UNIX workstation.** More than 120,000 engineers, scientists, and educators are already using Mathcad to turn their computers into powerful workstations that can handle virtually any technical application.

Call 800-MATHCAD to request a free demo disk!

SWITCHING STRATEGIES

System 7 provides several ways to switch between programs that are already running: by using the application menu (1); by

double-clicking on the grayed icon of an open application (2); and by clicking within the window of an inactive application (3). To indicate

that it's OK to switch to a different program while a file operation takes place, the Finder displays this new type of dialog box containing a title bar (bottom left), which replaces the old-style box (bottom right).

one of the other switching techniques System 7 provides. Or try out the new and improved Finder's ability to copy and search for files in the background (see "Switching Strategies").

You Can Run—And You Can Hide

One problem with the old System 6 MultiFinder was that after you'd opened a couple of programs, your screen became cluttered with windows. Returning to the Finder or switching to a specific program was often cumbersome. System 7's application menu provides two Hide commands and a couple of options that allow for tidier desktops and more efficient switching.

The Hide Others command hides all open windows except those of the *active* application—the one whose menus are in the menu bar. You use this command if an inactive program's windows are obscuring something on the desktop, such as the Trash icon, or simply to reduce distracting clutter.

The Hide command always includes the name of whatever program is active—because it hides only the windows of that program. (If the Finder is active, for example, the

command reads Hide Finder.) You might, for example, want to temporarily hide a spreadsheet's window so you can access another file on the desktop, or to hide a game's window when the boss shows up.

Another alternative is to switch to another program and hide the current program's windows in one fell swoop. Just press the option key while choosing the second program's name from the application menu or while clicking in a window of the second program. This option-switch trick is handy for jumping back to the Finder: press option while clicking on the desktop, and the active program is hidden while the Finder is activated.

Incidentally, hiding an application is *not* the same as quitting it. Not only is a hidden program still open, if it's performing a background operation (such as transferring a file over a modem) when you hide it, the operation continues uninterrupted as well. And if you check out the application menu, you'll see that the program is still listed, but its icon (not its name) is grayed, indicating its hidden status. Choose the program's name, and its windows appear in a flash.

FONT MOVING SIMPLIFIED

To install a font, drag its icon to the icon of the System Folder. The Finder recognizes that you're moving a font and asks if you'd like to stash it in the System

file (bottom). Click on OK, and the Finder installs it for you. If you've already opened the System Folder, you can install the font by dragging it directly to the System file's icon. If you've already

opened the System file, you can drag the font to the System file's window.

To remove a font, open the System file by double-clicking on it. A window appears listing the contents of the System file. Locate the font you want to remove, and drag its icon out of the System file's window. To delete the font permanently, drag its icon to the Trash. For storing fonts you want to keep for future use, consider creating a folder with a name such as Inactive Fonts.

Nor does hiding a program save any memory. If memory is tight but you want to start another program, you need to quit one or more of the programs you've already opened. Remember that you can display a memory-usage graph by choosing About This Macintosh from the Apple menu when the Finder is active. You can use this graph to gauge how your Mac's memory is being used and to determine how much free memory remains. You can also fine-tune your program's memory requirements by using the Get Info command. For more information, see the System 7 manuals as well as "More for Your Memory" and "Getting Started with Memory," *Macworld*, April 1990.

Truth in Type

System 7's TrueType outline fonts let the Mac display and print sharp text regardless of size. With the *fixed-size*, or bitmapped, fonts used by previous System versions, that wasn't the case; the Mac needed a separate, space-consuming font description for every size you used. If you chose a size for which no description existed, the Mac scaled an existing size, which resulted in lumpy, jagged-edge text.

To see for yourself, start up a word processor and choose Helvetica

from its Font menu. (You will notice that in the program's Font or Size menu, every size appears in outline style—System 7's way of letting you know that they are outline fonts.) Type a sentence, and then select the text you typed. Next, choose some different sizes of Helvetica—try some tiny ones such as 6-point and some huge ones such as 127-point. (In Microsoft Word, choose Character from the Format menu to specify these oddball sizes; in Claris's MacWrite II and T/Maker's WriteNow, choose Other from the Size menu.) As you zip from size to size, the benefits of TrueType fonts will become clear.

If you have some old, fixed-size fonts you're fond of, you can still use them with System 7, but you get good results only when you use sizes that have bitmapped descriptions. If you choose a size for which no bitmap exists, it's back to the scaling world and its ugly side effects.

If you use Adobe Type Manager (ATM), you'll be glad to know it works well under System 7. Indeed, TrueType and ATM complement each other nicely—TrueType creates sharp text at any size for fonts in its own format, and ATM does the same for downloadable PostScript printer fonts (*continues*)

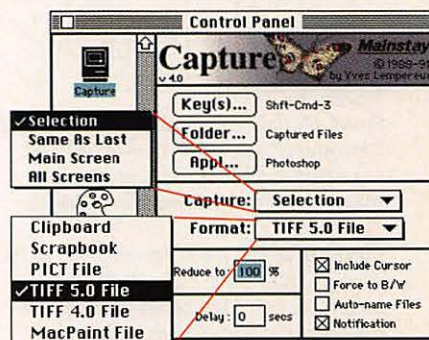

TRADE UP TO CAPTURE 4.0

Here's your chance to trade up to the professional screen capture utility — Capture 4.0 — for only \$49.95. Save over 60% off the \$129.95 suggested retail price!

We've taken a 5 mouse award winner that already resides in the MacWorld INIT Hall of Fame and made it even better. Now you can save captured images in TIFF, PICT or MacPaint formats. Capture any selection, multiple screens, pulled-down menus, dialog boxes — even 24 bit color. And it's System 7.0 friendly, as well.

For first time screen capture buyers, see your dealer or contact Mainstay for more information on Capture.

TRADE UP DETAILS: Take a screen shot of your System folder, using any Mac screen capture utility — *Camera™*, *Desk Camera™*, *Exposure Pro™*, *Fkey™*, *Flash It™*, *Image Grabber™*, *MenuPicture™*, *Screen Dump™*, *ScreenShot™*, *Screen Snap™*, *Snaploft™*, *SnapShot™* etc. Print & send it with your credit card number & expiration date or a check for \$49.95 plus tax (CA residents) and \$5.00 shipping charges. Save over 60% off the suggested retail price! Act now!

OFFER EXPIRES AUGUST 31, 1991.

You Made the Right Choice Once...

Why Stop Now?

High-Performance Laser Printers from LaserMaster

▶ PostScript® Printing for Macintosh II Users.

Power. Flexibility. Control. When you bought a Macintosh® you knew you were getting something special. A LaserMaster™ printer will make you feel that way all over again.

Choose from 400 x 400 dpi resolution all the way up to 800 x 800 TurboRes® with LaserMaster's full line of high-performance laser printers for Macintosh II users.

LaserMaster printers offer superb PostScript printing — starting at just \$2,195. The compact MaxWriter 400 delivers crisp 400 x 400 dpi resolution, while the MaxWriter 600 gives you 600 x 600 TurboRes output. Looking for more performance and higher resolution? The LaserMaster 800 gives you 800 x 800 TurboRes output at up to eight pages per minute.

If you already own an Apple® LaserWriter, you may be interested in a resolution boost from our complete line of printer controllers. Go from 300 dpi print quality up to 800 x 800 TurboRes in seconds.

▶ TurboRes Technology.

TurboRes, our patented resolution enhancement technology controls the position and height of pixels on the printed page and eliminates rough, stair-step edges between pixels. We've taken the power of TurboRes and combined it with Microsoft's® PostScript-compatible TrueImage™ software to give you the best possible print results — right from your desktop.

▶ AppleTalk® and Ethernet Network Compatible

Need a fast network printing solution? All of LaserMaster's Macintosh printers are accessible through the Chooser using Ethernet or LocalTalk® cabling. The result? Your LaserMaster printer is available to *any* Macintosh on the network.

▶ Typographic Versatility

LaserMaster includes a collection of 50 premium Type 1 format typefaces with each of its products. Selected from the libraries of URW, ITC and Digital Typeface Corporation,™ LaserMaster typefaces offer

you an expressive range of serif, sans serif and decorative typestyles. And, you can continue to use Type 1 fonts from Adobe® Bitstream® or Monotype® type libraries.

▶ Free Sample Output

See for yourself the difference a LaserMaster printer can make in all of your PostScript printing — call LaserMaster today for more information and a free sample of actual output, (612) 944-9696, Dept. 655.

Macintosh gives you the power to create your best. Now LaserMaster gives you the power to print it. ■

Circle 342 on reader service card

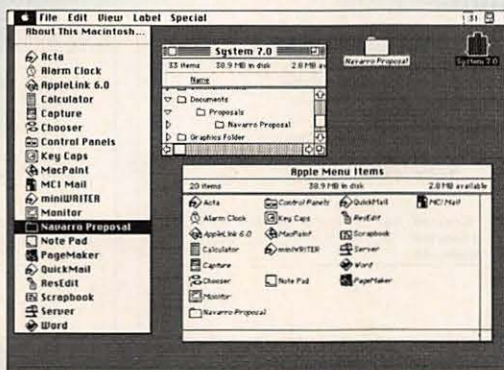

MAKING AN ALIAS

Aliases are small files that give you quick access to the items they're associated with: files, folders, applications, or even disks.

To create an alias, select the icon of the original item, then choose

Make Alias from the Finder's File menu. The alias (which looks just like the original except that its name is in *italics*) appears alongside the original, but you can move it wherever you like.

Here, aliases have been created for the folder named Navarro Proposal, which is nested within the Proposals and Documents folders. One alias has been moved to the Apple Menu

Items folder (within the System Folder), which puts it on the Apple menu, while a second alias sits on the desktop. The original folder can now be accessed without opening any disk or folder windows, either

by choosing the alias from the Apple menu or by double-clicking on the alias on the desktop.

(those font files you stash in your System Folder and that are downloaded to a PostScript printer's memory during a print job). You can also use font-management utilities such as Fifth Generation's Suitcase II with System 7, although System 7's streamlined approach to installing and removing fonts makes such activities less valuable unless you frequently switch between sets of fonts.

A Better Finder

System 7's greatly improved Finder makes installing and removing fonts very similar to dragging files into or out of a folder (see "Font Moving Simplified"), but you'll notice these operations take quite a bit longer than dragging files. That's because the same technical gymnastics that were performed by the Font/DA Mover utility under previous systems now take place behind the scenes. In System 7, the Finder is the gymnast. (So forget Font/DA Mover—if you try to run it under System 7, a message appears telling you that it isn't needed.) Just remember to quit any programs or desk accessories before trying to

install or remove a font; System 7 can't install or remove fonts when any programs are running because Mac programs can't update their Font menus on the fly.

And the Finder finally lives up to its name, providing a Find command that lets you locate an item by specifying part of its name or using other criteria. The Finder streamlines the Mac's operation in other ways.

- You can select an icon by typing the first few characters of its name. Combine this technique with the ⌘-O keyboard shortcut for the Open command, and you can open a document or application without touching the mouse. Other keyboard shortcuts let you open and close folders and expand or collapse the outline view of a disk or folder; for a list of these and other shortcuts, choose Finder Shortcuts from System 7's Help menu.
 - You can open a document by dragging its icon to an application icon. When you do, the application icon becomes highlighted. Release the mouse button, and the Finder opens the document. This trick is handy for

importing a text-only file into a word processor. For example, to start Microsoft Word and open a text-only document, drag the text-only document to the Word icon.

- You can install a system-related file—a font, INIT, control panel (a cdev—one of the files whose icons appeared in the old Control Panel DA), printer driver, and so on, simply by dragging it to the System Folder. The Finder then asks if you'd like to put them in the appropriate folders within the System Folder.

A Tidier System Folder

Those folders within the System Folder hold many of the icons that cluttered the System Folder in previous system versions. The Control Panels folder replaces the old Control Panel desk accessory, which has gone to the great Trash icon in the sky. The new approach is far more flexible: you can open any control panel by double-clicking on it, you can move often-used control panels to the Apple Menu Items folder, and you can have more than one control panel open at once.

The Preferences folder is designed to hold the preferences files that many programs create as they run. Most current programs stow their preferences files in the top level of the System Folder, and will need to be updated to take advantage of the Preferences folder.

The Extensions folder holds printer drivers and INITs. The former are now officially called *Chooser extensions* by Apple; INITs (sometimes called start-up documents) are now called *system extensions*.

The Startup Items folder holds anything that you want the Mac to open automatically after starting up, such as often-used programs, documents, control panels, or desk accessories. Don't let the Startup Items folder's name confuse you—this folder does not hold INITs.

System 7's subdivided System Folder has important ramifications for INITs. In earlier System versions, all INITs and cdevs with INIT components live in the System Folder and load in alphabetical order. In System 7.0, INITs still load alphabetically, but from a few different places. First, Sys-

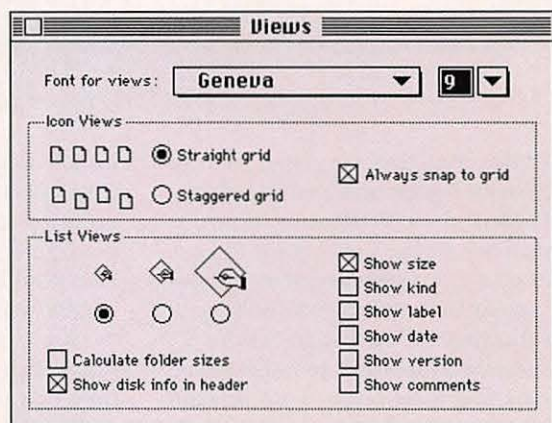

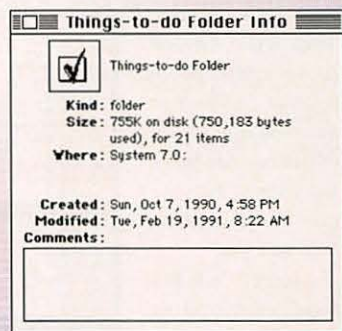

tem 7 alphabetically loads the extensions in the Extensions folder, followed by those in the Control Panels folder, and then those in the top level of the System Folder. You need to keep this loading order in mind when troubleshooting INIT conflicts. Also, if you use an INIT-management utility such as INITPicker, you must put it in the Extensions folder so that it loads before other INITs.

Aliases and the Apple Menu

One of System 7.0's most useful features is the *alias*, a small file that acts like an electronic remote control for a file, folder, program, or disk. Aliases have 1001 uses, but the most common is to give you convenient access to a file or program that you've buried within other folders (see "Making an Alias"). For example, you merely double-click on an alias you've created for your word processor to open the actual application, without opening its folder. And you can have multiple aliases—in

CUSTOM ICONS

System 7.0 lets you customize the icons of most items by using the Get Info window. First, select an image in a graphics program and choose Copy. Next, select the icon in the Get Info window; if the icon can be modified, it appears within a rectangle (left). Finally, choose Paste, and the Mac scales the graphic to fit and turns it into an icon (right). The icon for this folder is from HyperCard 2.0's Icon Ideas stack.

IMPROVING YOUR VIEW The Views control panel lets you decide how the contents of disks and folders are displayed. For automatic icon cleanup, select *Always Snap to Grid*. You can choose any of three different list-view sizes, as well as which information you want shown. **Tip:** To create small list-view windows when you click a window's zoom box, uncheck most or all of the Show options.

various locations—for the same item.

A newly created alias icon looks exactly like the icon of the file or program it points to. The only difference is that it has the word *alias* in its name, but you can change the name to anything you like; you'll still know the item is an alias because its name appears in italics. If you need to quickly locate the item that an alias points to, select the alias, choose Get Info from the Finder's File menu, and (continues)

NOW DISAPPEARING AT A LOCATION NEAR YOU.

Susan Middleton © 1987. All Rights Reserved.

The fact is, it's already too late to save at least 48 California plants and animals.

It's not too late, however, for another 800 that are on the brink of extinction.

From the diminutive kit fox (pictured above) to the majestic desert bighorn sheep, there's still time...but only if we act now.

Since 1959, the California Nature Conservancy has saved 277,000 acres of wild land. And it's been done by using a novel approach—we've bought it.

You see, our philosophy is to use the money we receive to buy land and therefore save valuable, irreplaceable plant and animal life.

We can't do it alone. Please help us by sending a tax-deductible contribution to The Nature Conservancy at 785 Market St., San Francisco, California 94103 or call 800-582-2273 for more information. You'll be saving some of California's most important resources.

Remember, the loss of another species is a loss for all generations who follow us.

To Protect and Preserve

click on the Find Original button. And aliases are smart—you can move and even rename the item that an alias points to, and the Mac will still find the item when you open its alias.

Aliases team up well with the new and improved Apple menu, which gives you quick access to anything you can open, including programs, documents, folders, control panels, and

aliases. To add an item to the Apple menu, simply put it (or its alias) in the Apple Menu Items folder, which is located within the System Folder.

More Customizing Options

In last month's column, I discussed numerous Finder-customizing projects, most of which required resource-editing utilities such as Apple's

ResEdit and Michael C. O'Connor's Layout. In System 7, you can perform many of the same customizing tasks—as well as some new ones—without any additional utilities.

The Views control panel lets you tweak the way the Finder displays disk and folder contents (see "Improving Your View"). The Always Snap to Grid option is handy. It puts the Finder in what I call Felix Unger mode—it always cleans up after you, snapping icons that you drag to an invisible grid, keeping them neatly aligned.

Another customizing task involves disabling the warning message that appears when you choose Empty Trash. It's easy: Select the Trash icon and choose Get Info. When the info window appears, uncheck the Warn Before Emptying box. Keep in mind that this removes an important safety net, so don't choose Empty Trash unless you really mean it.

Speaking of Get Info, its window is the gateway to two more customizing options. You can use the Get Info window to change the icon of a file, folder, or disk (see "Custom Icons"). You can even paste a scanned image into an icon—a handy way to preview a scanned image without starting up a graphics program.

(continues)

So You're Feeling Squeezed

Ouch. Another typical day at the office—rush projects, training seminars, capital crunches and trade shows—just for starters. No need to panic. *Now there's help.*

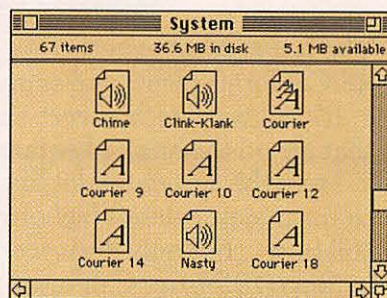

Rent a PC or a workstation from Genstar—Apple, IBM, Compaq, Toshiba or Sun Microsystems. Get the equipment overnight and keep it as long as you want. Imagine using state-of-the-art equipment with no obsolescence worries. Plus, you can expense, rather than capitalize, to take the pinch off your balance sheet.

One call and we're on your team. Together, we'll find the best way to take the squeeze off. Call toll free today.

GENSTAR
RENTAL ELECTRONICS, inc.

1-800-422-3300 (US)

1-800-387-6646 (Canada)

WINDOW ON THE SYSTEM FILE When you double-click on the System file, a window appears listing its fonts and sounds. You can play a sound or see a font sample by double-clicking on an icon. Note that a TrueType font's icon has several type sizes in it. A fixed-size (bitmapped) font icon shows just one size, and the icon's name indicates the size. Notice that no desk accessories appear in the System file window. System 7 still lets you use DAs, but you no longer have to install them with Font/DA Mover. Instead, they reside in separate files, and you open them by double-clicking on their icons. In short, DAs work more like stand-alone programs.

And the Winner is...

MacGlare/Guard™

But you are the real winner when you use MacGlare/Guard™—the ultimate relief from eyestrain, fatigue, and headaches caused by glare. OCLI's patented Invisiglass® coating eliminates 99% of the glare, stops annoying flicker, enhances contrast and improves readability.

In fact, MacGlare/Guard™ has the same patented coating that was honored by the Academy of Motion Picture Arts and Sciences. That's right! In 1968, OCLI received a Class II Scientific or Technical Award "for the development of an improved antireflection coating for photographic and projection lens systems."

There are also models available that shield the user from 99.99% of the low frequency E-field electromagnetic radiation. Combine all this with safety glass, and you have features you just won't find in any other filter. MacGlare/Guard™ filters are available in your choice of blue or neutral gray glass, and custom fit your Macintosh so perfectly you won't even know it's there. But your eyes will!

So, for the award-winning technology that's used in the movies and on your monitor, get a MacGlare/Guard™ filter. For more information, call toll free 1-800/545-OCLI (6254).

MacGlare/Guard™ The Best You'll Ever See!

MacGlare/Guard filters fit all Mac, Mac SE, Mac SE-30, Mac Plus, Mac II Color, Apple Two-Page Mono, Apple Color RGB, SuperMac and Mac 512K models. Priced from \$79.95.

HOW TO

A document's Get Info window contains a Stationery Pad check box that lets you turn a document into a *stationery pad*, a template you can use as a starting point for new documents. Candidates for stationery pads include a custom letterhead, a newsletter template, or a fax cover sheet. When you open a stationery pad, the Finder makes a copy of the pad, leaving the original unchanged. Thus you can reuse the same document without worrying about accidentally replacing its contents.

As you work with System 7.0, you'll discover that many of its features become even more powerful when you combine them. For example, say your office has one Macintosh whose hard drive has been made available to everyone via System 7's file-sharing features. You can create a stationery pad for a document on that shared hard drive, then make an alias of it, and then stash the alias in the Apple Menu Items folder on

your own hard drive. From then on, whenever you choose the alias's name from the Apple menu, the Macintosh will connect to the shared hard drive if necessary, make a copy of the stationery pad, and then open the copy—a multistep process reduced to one mouse-click.

There's far more to System 7 than I have room to describe here. In upcoming columns I'll take a closer look at some of System 7's subtleties, especially IAC. With IAC and *AppleEvents*, programs (or more accurately, versions of them updated for System 7) will be able to work together in remarkable ways. IAC lets you move information from one program to another *and* have the information updated automatically when you change the original. *AppleEvents* allows separate programs to work together intimately, exchanging data and even controlling each other.

In the meantime, the best way to master System 7's new features is by

experimenting. Explore the Finder's new menu commands. Turn on the balloon help feature and point to everything you see, including files and folders within the System Folder. The Finder provides over 1300 help balloons that succinctly explain its menu commands, the System Folder's components, and the Mac's user-interface elements. If you're just getting started with the Mac, you'll develop a better understanding of how it works. And if you've used earlier versions of system software, you'll feel like you've discovered the Mac all over again. ■

Contributing editor Jim Heid focuses on a different aspect of Mac fundamentals each month. For more on System 7.0, see his latest book, Macworld Complete Mac Handbook (IDG Books Worldwide), an updated, expanded collection of more than 40 Getting Started columns.

Insights on WordPerfect 2.01

HINTS FOR MAKING WORDPERFECT DOCUMENTS A LITTLE CLOSER TO PERFECT

BY CHARLES SEITER

Longtime Mac enthusiasts who have been typing away for years in MacWrite, Microsoft Word, or WriteNow will probably be surprised to hear that most of the time WordPerfect is the second-best-selling Mac word processor on the

market. The first version, released after formidable delays (at one point, in fact, WordPerfect Corporation was marketing the beta version to the public), had an impressive array of power features but a quirky, PC-influenced, and decidedly un-Mac-like interface. Version 2.01 is coded from scratch and offers still more power while managing to bring its interface into closer conformity with the expectations of users trained on the Mac. To appreciate the power of WordPerfect 2.01, it is worth getting past the beginner's level. Here are some hints for doing just that. Special thanks to Marsha Terry and Kathryn Pond-Sargeant of WordPerfect Corporation for their advice and for reviewing these tips.

Style Is Everything

One of the main differences between 2.0 and earlier versions of WordPerfect is 2.0's Styles feature. It is a welcome addition, since everyone simply expects styles in a high-end word processor. The first thing you might want to know about style is how to change the parameters of Normal, the default style that ships with the program. Go to the Layout menu, pick Styles, and select Edit from the pop-up menu that appears. Scroll down the list of styles to Normal, select it, and click on the Edit Contents button. Now you can define the style you want

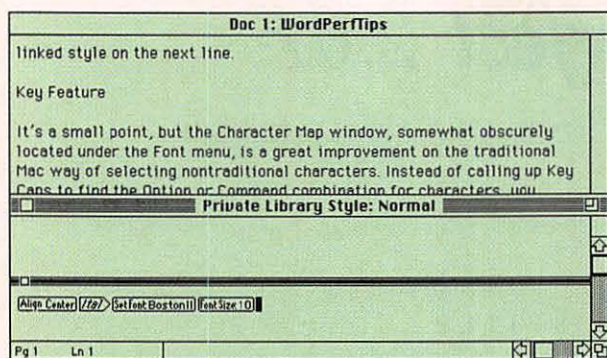

The best method for developing new styles that have at least a few elements in common with an existing style is to use the Based On and Link To options, which appear when you select New from the Styles pop-up menu. Based On makes the current

using the standard menus; just pick font, font size, columns, or other formatting information from the menus, and watch the program record the information in the styles-editing screen that opens at the bottom of the current document (see "Taking Note of Styles"). Note that, even if it may seem more convenient to pick style information from the Ruler—as you can in Word—the style option is available only from the menus.

style a base; you simply call up the appropriate items from the Layout, Font, and Style menus to make any changes (see "Based on Basics").

Link To makes it easy to format complex layouts with several styles. If, for example, you are creating a newsletter that has a heading with a distinctive font and margins, you can save time by linking two styles. First, create the text style with the font and
(continues)

margins (or columns) you need and save it with an appropriate name, like NLText. Next create a Heading style separately. Finally, select Link To and choose NLText from the choices in the scrolling list. When you create a document, you select the Heading style from the Style menu and type in the headline. Then press enter on the numeric keypad and the program switches you to the next linked style, in this case NLText. The enter key signals WordPerfect to start the linked style on the next line.

Merging with Macros

Macro programming can seem a daunting proposition for users whose main interest is basic word processing. WordPerfect makes macro programming fairly simple by offering a Record facility that can access all the capabilities of the Search menu and the Tools menu (including Graphics)—often you can produce a useful macro with just a few keystrokes.

Even simpler than the Record feature is the use of the macros already provided in the current shipping version (2.01). Two of these

macros are particularly useful. The first is Tables. When you select Tables, WordPerfect prompts you to provide the number of rows and columns you wish, and the macro sets up a boxed table for insertion of data. The other macro that you're likely to use extensively is the standard Labels Layout, for printing mailing labels.

Macro Power

A little work with the macro manual can often save lots of time. Suppose, for example, that you have a mailing-list file in another program and you try to use it with a form letter generated in WordPerfect. Immediately you realize that the rest of the software world is set up to use tab-delimited databases or lists (fields are separated by tabs; records are separated by returns). By creating a basic macro, you can bring a tabbed text file into WordPerfect, but the program can't read the file unless fields are marked with WordPerfect's own end-of-field symbol and the records end with its end-of-record symbol.

If you have a list of 500 names and addresses, you are not going to want

TAKING NOTE OF STYLES To change the default style for documents, call up Normal from the list of styles and choose Edit Contents. Your changes are recorded in the style-editing window at the bottom of the screen.

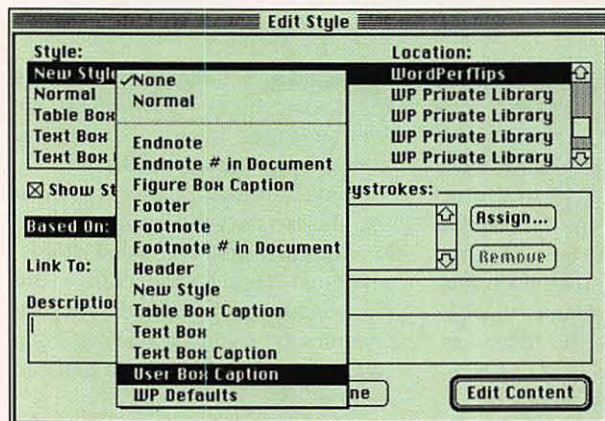

to replace all those tabs and returns by hand. But macros can make the replacements semiautomatically. One simple way to create such a macro is to turn on the Record function from the macro menu after you open the imported tabbed text document—be sure your cursor is at the beginning of the document.

In the dialog box that appears, enter a name for the macro; choose either the Private Library or the current document in the Save In pop-up menu; and click on New to dismiss the dialog box. Now choose Find Code from the Search menu, scroll down to tab in the list that appears (or press T to get there fast). Next click on Find (you'll see that the cursor jumps to the first tab in the open document), then click on Remove, and close the Find Code window. Now choose Merge from the Tools menu and double-click on End of Field in the scrolling list that appears. Finally, choose Stop Recording from the Macro menu and click on Yes when the program asks if you want to save your changes.

What you have at this point is a little one-at-a-time replacement macro. If you have 500 records, you probably want something a little more automated. By selecting Edit from the Macro menu you can call up your macro as a text file (see "Making Macros"). You can add a loop that repeats the one-time replacement as many times as you want. Suppose each record contains five fields. Then the whole file has 2500 tabs to be replaced. If you add the following lines in the macro-editing window, the macro will execute 2500 times.

```
Assign(Var01;0)
Repeat
  (core replacement macro you just recorded)
  Assign(Var01;Var01+1)
Until(Var01=2500)
```

This macro merrily makes all the replacements you need. Now go through and record a macro for changing all the hard-returns to End of Records (using the same Find Code and Merge list you used in the first case), and make that macro repeat 500 times instead of 2500. After you (continues)

BASED ON BASICS The Based On option in WordPerfect styles lets you tinker with an already developed style. You will be able to see your changes explicitly recorded in the style-editing window—this makes it easy to track small differences between styles.

INSIGHTS

HOW TO

MAKING MACROS

This little sample shows, at least, that the macro language is easy to understand, even if the diminutive (and nonmodifiable) type in the macro-editing window calls for acute vision.

run both macros, the file is properly formatted for merging with a WordPerfect document.

This, by the way, is the least sophisticated way to get the job done; an experienced macro programmer would write a loop that searches for and replaces each kind of delimiter automatically until the loop reaches the end of the file, so the user doesn't have to keep track of file length. But the above procedure works, it's easy to debug, and it lets you get a glimpse of macro power.

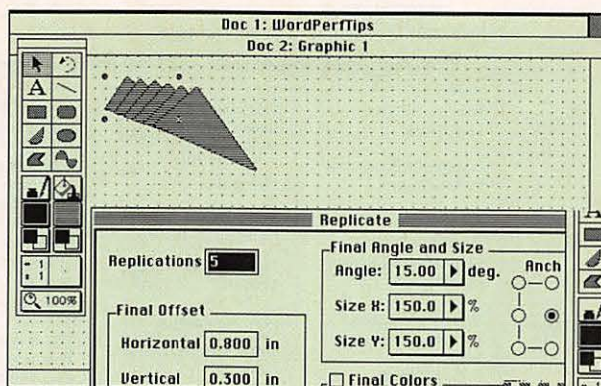

Switched-On Macros

If you name a macro OnStartup and use WordPerfect's Librarian feature to copy it into your USA Private Library (the new 2.01 name for WP Private Library), that macro runs every time WordPerfect is started. Often this approach is convenient if you are working on a project that calls for unusual document formats or graphic constructions embedded in documents. You can also put start-up macros into the Common Library for network users.

Similarly, if you name a macro OnOpenDocument and save it in your document, the macro executes automatically when you open that document in WordPerfect. This trick doesn't work if you open the document simply by double-clicking on the Desktop icon, but this apparent limitation in function means that you can easily choose whether to run the macro or not.

Page Layout for the Amateur

The Text Box feature of WordPerfect can be used to seam together professional-looking one- or two-page flyers in a hurry. Basically, when you open a text box you get a miniwindow for word processing (the text box can handle WordPerfect's full range of fonts, styles, and columns), which can be dressed up with attractive frames and borders. A text box can also be positioned (using box handles), numbered, and captioned. So, if you have a number of short text items to arrange on a page, one maneuver is to put all items smaller than a page-
(continues)

POWER DRAWING

The Replicate command in the Arrange menu of the Graphics window in WordPerfect is a veritable artwork factory—you can replicate any graphic selection while scaling, rotating, translating, and even color-blending the set of copies.

Your ticket

to information, innovation and incredible savings.

Preregister now for MACWORLD Expo/Boston and get \$10 to \$15 off your ticket price.

The largest Macintosh event in the world will be in Boston Tuesday, August 6 through Friday, August 9, 1991, at the World Trade Center and Bayside Exposition Center. This year's MACWORLD Expo/Boston will fill you with information on the latest hardware, software, peripherals and services. It will thrill you with innovations that make the Macintosh easier to use. It will stir your imagination with new ways to put your Mac to work.

And that's not all. Return the attached preregistration card with your payment by July 1, and you'll receive incredible savings — \$15 on all Conference Sessions* and Exhibits (\$65 now, \$80 cash at the door), or \$10 off Exhibits-only admission (\$15 now, \$25 cash at the door).

When you preregister, you'll save time as well as money. We'll send your admission badge early, so you can walk right into MACWORLD Expo, right past the long lines at the door. With 50,000 people expected to attend this world-class event, preregister now and maximize your time on-line at the exhibits, not in line.

If you go to one computer show this year, make it MACWORLD Expo.

Whether your Mac is in your office, studio, home, lab or classroom, you'll find something new at MACWORLD Expo. And if you don't have a Mac yet, come and see what you've been missing.

Networking. Spreadsheet analysis. Databases. Education. Research. Word processing. Accounting. Law. CAD-CAM. Forecasting. Design. Publishing. Illustration. Animation. Music. Programming. Entertainment. You'll see it all.

More than 400 companies will be exhibiting in two locations, spread over 300,000 square feet. And for your convenience, there's free shuttle service connecting the World Trade Center and the Bayside Expo Center during show hours.

Ten conferences in one.

This year, MACWORLD Expo/Boston is bigger than ever with ten conferences in one. Each conference series will be all inclusive and have its own focus. Create your own agenda. Spend as much time as you'd like at any or all of them.

MACWORLD Expo Boston Show Hours

Exhibits and Conference Programs

Tuesday, August 6
10 a.m. to 6 p.m.

Wednesday, August 7

BY JULY 1 AND TAKE

\$10 - \$15 OFF

YOUR TICKET PRICE

Use this ticket to preregister for MACWORLD Expo/Boston by July 1 and save \$10 to \$15.

The largest Macintosh event in the world will be in Boston from Tuesday, August 6 through Friday, August 9 at the World Trade Center and the Bayside Expo Center. And when you preregister by July 1, you'll save time and money.

Please choose your package and fill out the form completely. Incomplete forms will be returned. One form per person; make photocopies for additional people. Please do not staple check to form. Send completed forms to:

**MACWORLD Expo/Boston,
P.O. Box 4010, Dedham, MA 02026.**

Registration forms received after July 1 will be returned. Purchase orders cannot be accepted. Registration fees are nonrefundable. Call the MACWORLD Expo/Boston Hotline at (617) 361-3941 for more information.

Please register me for:

☐ Package One \$65

Conference sessions* and exhibits. Pre-register by July 1 (\$80 cash only at the door).

U.S. Attendees: You will be mailed your badges on or about July 24. Be sure to check box indicating where badge should be sent. All other badges will be held at the Preregistration Counter at the Bayside Expo Center for pick up beginning Monday, August 5.

International Attendees: If you're preregistering from outside the U.S. and want your badge sent to you instead of picking it up at the Bayside Expo Center, check the appropriate box below and add \$45 to your preregistration fee. Fill in your exact street

address (no P.O. boxes) and include your telephone number and country code. We will Federal Express your badge directly to you.

Bonus for All Attendees: All registration fees include a 6-month, \$7.50 paid subscription to MACWORLD Magazine. (The basic subscription rate is \$30 for 12 issues.) We'll include a subscription request form in the preregistration package we return to you in the mail.

☐ Package Two \$15

Admission to exhibits only. Preregister by July 1 (\$25 cash only at the door).

☐ (Check if applicable.) I'm an International attendee and would like my badge shipped by Federal Express. Enclosed is an additional \$45.

Please send my registration badge and further information to:

Please check one: ☐ Home Address ☐ Company Address

Last Name _____ First Name _____

Street Address _____

City _____ State _____ Zip _____

Country (Other than U.S.) _____ Telephone _____

If mailing to company address:

Title _____

Company _____

☐ Check enclosed (make payable to MACWORLD EXPOSITION) Amount \$ _____

☐ Master Card ☐ Visa ☐ American Express Amount \$ _____

Account Number _____ Expiration Date (include all numbers) _____

Card Holder Signature (Signature necessary to be valid) _____

If card holder is other than registrant, please print cardholder's name below:

Last Name _____ First Name _____

Cash only at the door. After July 1, you must register at the show.

Please check the appropriate information:

01. ☐ Manufacturer (non-computer)
02. ☐ Manufacturer (computer industry)
03. ☐ Distributor/dealer/retailer/service
04. ☐ Business
05. ☐ Legal services
06. ☐ Communications/publishing
07. ☐ Education
08. ☐ Government
09. ☐ Consultant
10. ☐ Transportation

*MACWORLD Expo conference sessions are on a first-come, first-served basis with no guaranteed seating and are subject to change without notice. All registration fees are nonrefundable. Do not staple check to form. Send completed form, with check or money order to: MACWORLD Expo, P.O. Box 4010, Dedham, MA 02026.

MW791

The Designer Mac. The latest trends and tips for graphic artists, ad agencies, architects and engineers.

The Macintosh in Multimedia. The dazzling developments surrounding the exciting integration of video, sound, animation, and graphics.

Mac Programmer/Developer Forum. The place for novice and veteran techies to meet, learn and brainstorm.

Future Technologies on the Mac. Cutting edge innovations destined to make the Mac even more powerful and versatile.

The Mac in Entertainment. Demonstrations, trends and how-to's for this fascinating new application area.

The Business/Professional Macintosh. Solid advice and case studies for corporate, small business, legal and health care users.

The Mac in Education. How teachers and administrators — from kindergarten through college — can use the Mac to great advantage.

Maximizing your Macintosh. Share experiences, get new ideas and insider's tricks at these advanced insider workshops.

Getting Started with Mac LC. A brand-new conference for those who are brand-new to the Mac.

You-Asked-For-It. Special requests, newest market developments and the perennial favorite, Mac User Group Extravaganza (MUSE).

UGWUMP (User Group Welcoming/Unwinding/Meeting Place). "People networking parlor" for user groups. Share success stories, exchange newsletters and literature. Learn how to start a user group in your area, and more!

Save 5% to 45% when you fly American Airlines.

MACWORLD makes it possible to save money getting to and around Boston. American Airlines will automatically discount your fare from 5% to 45% when you call 1-800-433-1790 and ask for Star File #S0580AL.

Reduced rates for hotels and cars.

What's more, you'll get a reduced rate when you book your reservation directly at one of the hotels listed here. Just mention you're coming to MACWORLD Expo. But hurry, these rooms fill up fast.

And if you plan to rent a car, you'll receive a great rate from Avis when you tell the reservations operator that you're a MACWORLD Expo attendee. Just call 1-800-331-1600 and ask for Worldwide Discount #B136000.

Don't miss out on incredible preregistration savings.

The deadline to receive your preregistration discounts of either \$10 or \$15 is fast approaching. So fill out the attached form today and send it in with your payment (check or credit card). And if the form is missing from this ad, or if you have any other questions, just call the prerecorded MACWORLD Expo information hotline at **617-361-3941.**

MACWORLD Expo.
For all that's new in the world of Macintosh, it's just the ticket.

**MACWORLD
EXPOSITION**

* All conference sessions are on a first-come, first-served basis with no guaranteed seating. MACWORLD Expo is sponsored by Macworld, the Macintosh™ Magazine, an IDG Communications publication. MACWORLD Exposition is an independent trade show produced by World Expo Corporation, and managed by Mitch Hall Associates and not affiliated with Apple Computer, Inc. MAC and MACINTOSH are trademarks of Apple Computer, Inc. World Expo is an IDG company, the world's leader in information services on information technology.

COMPUTER BUSINESS TODAY AN 8-PART SPECIAL EDITION

In Today's tough competitive corporate climate timely technology decisions can have a profound effect on a corporation's performance capabilities, at every level.

"Computer Business Today" is a fast-paced special edition of Business Today whose format is strictly application-oriented "Hands On" information, with the end user in mind.

An Elite assembly of the industry's state-of-the-art products will be showcased each week beginning May 12. Pictured below is a representative window to a range of technologies featured that harness the impact of computer technology to create and solve task-specific applications from Telecommunications to Networking -- solutions that today's marketplace demands.

Super Cordless Mouse, Super Mouse II w/Microsoft Windows 3.0, and Z-Scan hand held scanner by Z-Nix Company -- a new line of computer input devices for improved productivity.

Open Plan 4.0, a major upgrade to Welcom Software Technology's project management software package now includes Project Executive, a new graphical interface that lets users input and view data from three perspectives.

FORVAL AMERICA'S SA14400 super-high speed standalone, dial-up modem for personal computers/workstations -- 14.4Kbps base speed with up to 4:1 data compression and exceptional accuracy.

Magnus 1.35 gigabyte capacity data cartridge by 3M -capable of supporting the high densities of the new QIC-1350 recording format.

The TurboPS Series by NewGen Systems -- a family of advanced PostScript compatible printers, distinguished by higher resolutions (up to 1200 x 600 dpi) and faster processing speeds.

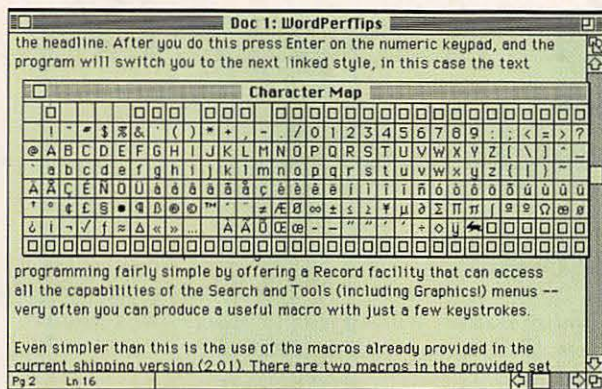

Gandalf Data -- The Access Hub 132 10 BASE-T compliant LAN wiring hub with the Access Manager network management system -- allows creation of Ethernet networks with graphical user interface and fault management capabilities.

Diskette duplication services by Corporate Disk Company - catering to the specialized needs of corporations and software developers.

"Computer Business Today". For People who use computers. Tuesday evenings, Friday and Sunday mornings. Check your local listings for time and channel information.

length column of text into text boxes. That way you can drag text boxes, and any graphics boxes you have, around on the page just as if they were independent pieces of paper and you were doing traditional high-school-news-paper pasteup, except that the pieces are floating on a Macintosh screen and are still editable.

This tip comes in handy for publications that have repeating headlines, or information boxes. You can create a headline or text, in a text box, with the style parameters that you want. These boxes can be stored, placed into a page layout, and moved around like objects. For short documents you can juggle text boxes to produce PageMaker-style results without having to worry about picas, or consulting a manual.

Quick Pix-Fix Tricks

The graphics environment in WordPerfect 2.01 is full of large and small amenities. If you double-click on the color tool in the Draw palette, for example, you can edit color selections, producing novel blends or rainbows (you can also edit the pen pattern by double-clicking on it). The same is true for the monochrome tools—essentially you get a FatBits-like edit capability for the fills.

Another slick feature is graphics cropping. To crop an image you simply hold down the option key while you size the graphics box that automatically surrounds images in WordPerfect documents. This trick works for graphics created in WordPerfect as well as for imported art. When you hold down the option key as you move the handle of the graphics box inward, the box becomes smaller, but

the graphic remains the same size. If you move the handle outward, the image remains stationary, but the box enlarges to include more of the image. This is not only a fun tool to use, but it can make a dramatic impact on the art you create as well.

Finally, you can make complex repeated graphics easily in WordPerfect 2.01 using the Replicate command, which is under the Arrange menu in the drawing window (see "Power Drawing"). Note that you can specify offset position, size change, and rotation of each repeated figure independently.

Character Map Key

Instead of calling up Key Caps to find the option- or ⌘ -key combination for characters, you simply pull up the Character Map and click on the character you want (see "Lots of Character"). It's probably not the preferred way to type rapidly in French, but if you just need to find an occasional ™ or ∞ symbol it's wonderful.

Sharing the Wealth

If you've found a tip or shortcut not mentioned here, spread the word to other Macworld readers by sending it to *Quick Tips*, and if you've got suggestions for products you'd like to see covered in *Insights*, send them to *Insights*, Macworld, 501 Second St., San Francisco, CA 94107. \square

See *Where to Buy* for contact information.

As a Macworld contributing editor, Charles Seiter is no stranger to either his keyboard or the world of word processors.

LOTS OF CHARACTER
If you aren't a heavy user of umlauts, you'll find WordPerfect's Character Map (under Font) the fastest way to pick out non-ASCII characters for text. You can leave the map open while you work on a document.

CALL FOR ENTRIES

MACWORLD

Macintosh Masters IV Art Contest

ROBYN MILLER

HIDEAKI EBATA

CATHY MALKASIAN

WIN PUBLICITY AND PRIZES

Grand-prize and category winners will receive hardware and software prizes. Winning entries will appear in *Macworld's* annual Macintosh Masters Art Contest feature article.

DEADLINE

Macworld must receive all entries by Monday, July 8, 1991.

JUDGES

- Patrick Coyne (Editor and Designer, *Communication Arts*)
- Hugh Dubberly (Chairman, Computer Graphics Department, Art Center College of Design, and Creative Director, Apple Computer)
- John Lasseter (Animation Director, Pixar)
- Jane Palecek (Art Director, *In Health*)
- Robert Riley (Curator of Media Art, San Francisco Museum of Modern Art)

CATEGORIES

- Animation
- Fine Art
- Graphic Design
- Illustration
- Informational Graphics (charts, maps, diagrams, graphs)
- 3-D Modeling and Rendering
- Technical Illustration (medical drawing, architecture, and mechanical design—no drafting)
- None of the Above

RULES

Maximum four entries per person. Entries will be judged on technical innovation and aesthetic value. Send disk copy and hard copy of each entry (submit animations on disk or VHS-format tape). Entries will be returned only if accompanied by preaddressed packaging with correct postage. *Macworld* is not responsible for loss or damage. Entries must be original and entrant must have all permissions necessary for *Macworld* to use the artwork. Submission provides *Macworld* with a nonexclusive right to use or publish your work in any manner in connection with the art contest. *Macworld* employees and their relatives are not eligible. For more information, call 415/978-3149.

With each entry include this form or a photocopy (FILL OUT COMPLETELY AND SIGN), a detailed technical description of how you produced the work, and \$10 per entry. Send entries to: Macintosh Masters IV Art Contest, *Macworld*, 501 Second St., San Francisco, CA 94107, USA. Make checks payable to *Macworld*.

UPDATES

Here's our list of some of the latest versions of Mac software that were announced at the time we went to press. We hope you'll find it useful. The first price is the upgrade cost for registered owners; the second price is the current list price. (Send your update announcements to Updates, Macworld, 501 Second St., San Francisco, CA 94107.)

DataPrism version 1.1 allows local sorts on data that has been retrieved from server. Supports Oracle's SQL Connect connection to DB2 servers, and Oracle and Rdb servers through the Sequ-

Link system from TechGnosis. Brio, 415/961-4110. Free; \$345 new.

FileMaker Pro version 1.02 prevents corruption of files being converted from FileMaker II to FileMaker Pro, eliminates out-of-memory conditions when printing to the Hewlett-Packard DeskWriter, is compatible with all GCC Technologies printer drivers, and fixes bugs that affected repeating and sliding field features. Claris, 408/987-7000. Free; \$299 new.

SAM version 3.0 can be updated with new

virus-definition files from the Symantec BBS or the company's 24-hour virus news line. Includes a scaled-down version of the SAM Intercept module for systems with limited memory. Supports System 7.0. Symantec, 408/253-9600. \$29; \$99 new.

WordPerfect version 2.0 includes a graphics editor with drawing tools. Figures can be sized, scaled, or cropped. Automatically wraps text when figures are placed on a page. WordPerfect Corporation, 801/222-5000. \$89; \$395 new.

The best reason to buy new Aldus FreeHand over Illustrator is not for what it can do, but for what it can undo.

New Aldus FreeHand® 3.0 gives you more freedom to experiment. Because, unlike any other design and illustration software, Aldus FreeHand gives you "Undo" and "Redo"

commands for up to 99 steps. With Adobe Illustrator® you only get one.

And that simply gives you more confidence to explore greater design options with Aldus FreeHand.

The new on-screen "Colors," "Styles," and "Layers" palettes also make it easy to experiment with different colors, lines, fills, and graphic styles with a quick click of the mouse.

And while you are experimenting, you'll appreciate its smoother and faster drawing abilities, as well as its enhanced text and graphic capabilities.

To receive a free brochure, call 800-333-2538, Dept. 2M.

To upgrade, call 206-628-2320. And find out everything new Aldus FreeHand 3.0 can do and undo for you.

Aldus FreeHand gives you the option of drawing in a color Preview mode (left) so you can see what you're doing. You can draw only in a keyline mode (right) with Illustrator.

MACDIRECT

Specialists in Mac Storage

FUJITSU

"The world's most reliable drives"

Fujitsu is one of the world's largest manufacturers of hard drives for a good reason: They make the most reliable products available. Hard drives with an incredible mean time between failure that are warranted for up to five years. All featuring the "zero defect" reliability Fujitsu Mainframe and Super computers are famous for. At MacDirect, we ship hundreds of Fujitsu's 5.25" and 3.5" special Macintosh-version drives every month. So don't let your drive get you down. Order a Fujitsu from MacDirect today.

- All 3.5" Drives are available in zero footprint or micro cabinets as well as internal for all Mac's
- All 5.25" Drives are available in zero footprint external or as internals for the Mac II, IIfx, and IIfx

Fujitsu 3.5" Drives

3 Year Warranty. *50,000 Hours MTBF

		Internal	External

45DR SyQuest, two carts	1050
150t Teac Tape Backup	595
DATdrive™ 2.0GB DAT Backup	1495
OptiDisk™ 600 Sony Optical Drive	3250
OptiDisk™ 1000 Tahiti Optical Drive	4390

The 45R uses SyQuest cartridges, available as single, combo or dual removables.

OptiDisk™ 600—the least expensive way to store your data.

Internal & External Disk Drives

		Internal	External
40L*	(Maxtor)	\$270	\$390
52L*	(Quantum)	280	400
80L*	(Maxtor)	380	500
105L*	(Quantum)	440	560
120	(Quantum)	640	760
170	(Quantum)	690	810
210	(Quantum)	750	870

*Low power internal drives that meet Classic, IIsi & LC power specs.

Seagate MacWren Drives

	Internal	External
300	\$1250	\$1400
330	1450	1600
330*	1290	1410
425	1550	1670
415*	1790	1910
600	1590	1740
650	1740	1890
1000	2550	2700
1350	3490	3640

*Highest capacity internal drives for Mac cx, ci, SE and SE30. These also work in the II and IIfx.

UltraCombos and DAT Combos are excellent choices for network servers or for use in graphic, pre-press and CAD applications, where storage and workable hard drive space is imperative.

Combo Drives

105/45R	\$1050
170/150t	1420
170/DAT	2400
210/DAT	2500
425/45R	2040
425/DAT	3340

Macworld finds our drives quietest.

"The quietest of the 64 drives tested...fast—three of the twelve fastest tested were Third Wave's...and finally, 'a good bargain.'" -Macworld, March 1991.

UltraCombo

300/45R	\$1990

XAPSHOT brings 24 bit images to the Mac.

Take a look at the new XAPSHOT still video camera from Canon. XAPSHOT allows you to import high quality still video images to your MAC using a frame grabber. It stores up to 50 images on 2" diskettes and can be connected to your TV for previewing. Great for video, slide graphics and print work.

XAPSHOT	\$429
XAPSHOT Bundle—24 bit frame grabber	749

SIMMpack for the Classic

SIMMpack, the new Classic upgrade board from Logica makes use of your old 256k SIMMs in 1mb Classics. Save at least \$50 and as much as \$250 on every Classic by allowing the re-use of 256K SIMMs. Available in four configurations:

SIMMpack

Board only (0 mb)	\$45
(0 mb) with drive bracket*	63
(0 mb) w/40mb Maxtor	315
(0 mb) w/80mb Maxtor	445

*Remove SIMMs & drive from IIsi, install in Classic.

LC VRAM SIMM & 2 mb SIMM now available.

SIMMs—lowest prices, no CFCs

Third Wave, an environmentally conscious company, manufactures a full line of 1, 2 and 4 mb SIMMs without releasing harmful CFC's into the atmosphere. Call for manufacturer direct prices on SIMMs for all Macs, NTX printers, IBM (1x9, 4x9 and PS2) and SIPP's. LC VRAM \$109

See our complete line of video boards and monitors for every budget.

COPY SOFTWARE ILLEGALLY AND YOU COULD GET THIS HARDWARE ABSOLUTELY FREE.

Software piracy isn't just a crime. It's a shame. Because most people who do it aren't even aware that it's illegal. If you copy software that's protected by copyright, you could lose your job, face a civil suit, pay a \$100,000 fine and

possibly be imprisoned. So get the facts now. To request more information, contact the Software Publisher's Association at 1-800-955-7721. Because in a court of law, ignorance is one thing you won't be able to plead.

Don't Copy That Floppy

The Magic 88 Removable

\$599

Over **88MB** storage from our Magic SyQuest 45R bundled with the Sigma Designs Double-Up NuBus Compression Board and Disk Doubler software. Instantly compress files 2 to 10 times smaller. Works with any Macintosh drive.

Hard Drives and Storage

"The Magic 45 is one of the best SyQuest drives available, offering high speed and high quality."

Remember when
computers were
going to change
the world?

Homelessness. Child abuse. Environmental disaster. Through CompuMentor, people who know how to solve computer problems are matched up with resourceful, exciting organizations working to solve human problems.

In the last two years, we've put computers to work for more than 200 non-profits in the San Francisco Bay Area. Now it's

possible for you to replicate this miracle in your own area.

For your free start-up kit, just write or call our director, Daniel Ben-Horin.

Individual and corporate support is also welcome.

Together, we can make sure computers keep their promise.

CompuMentor

Teach Your Kids a Lesson They'll Never Forget.

With all the benefits of fitness — stronger heart and lungs, reduced stress, increased energy — isn't it time you started a regular exercise program with your children? The good fitness habits they develop now could give them a healthier, happier lifetime — a gift they'll appreciate long after their toys

and games are gone. Just find those physical fitness activities you all enjoy and exercise at least three times each week. For yourself and those you love, start today. Make fitness a family affair.

Fitness is feeling GREAT!

The Macworld Catalog Advertising Rates & Information

The Macworld Catalog section is a monthly link-up for advertisers and volume purchasers of Macintosh-related products and services. The Catalog offers advertisers a low-cost marketing opportunity and provides readers with a timely, easy-to-use menu for product buying.

Display ads are sold by column inches (2" minimum). Standard red is available as a second color. Text-only listings are available for a minimum of three issues at \$520 per issue.

For more information on *The Macworld Catalog*, call 800/888-8622.

Mac Rescue™ to the Rescue

6 megs of RAM for Classic Macs. Burial at sea for the Classic Macs? Never! There's years of productive life in all enhanced 128K and 512K Macs. Mac Rescue gives them the functionality of a Mac Plus, up to 4 megs of RAM plus a 2 meg RAM Disk and a SCSI Port. The obedient daughterboard snaps on the motherboard in minutes. One year warranty. RAM Disk software available.

A RAM Disk instead of a hard disk. In many situations, the RAM Disk eliminates the need for a hard disk, you just load the application(s) into RAM and use the floppy drive for data transfer.

We design, make and market 256K, 1 meg and 4 meg SIMMS, Softstep® memory expansion modules and

reports of my
demise are
barefaced lies!

Mac Rescue™ an upgrade board for Classic Macs. All have a one year warranty. Call today.

give NewLife™ to your old mac

NewLife 1

- CPU upgrade for the Mac 128K, 512K and 512Ke
- 20% faster than a Mac Plus
- SCSI port for hard disk drives
- 8 SIMM sockets allow up to 4Mb using 256K and 1Mb SIMMs

NewLife 2

- CPU upgrade for the Mac 128K, 512K and 512Ke
- Connect a larger monochrome monitor to your system
- Lets your Mac run current software
- 20% faster than a Mac Plus

NewLife 25Plus

- 68030 accelerator and 68882 math co-processor running at 25 MHz for the Mac 128K, 512K, 512Ke and Plus
- yielding Mac IIci performance levels

NewLife 25SE

- 68030 accelerator and 68882 math co-processor running at 25 MHz for the Mac SE
- yielding Mac IIci performance levels

NewLife SE video display interface card

- add a low-cost larger monitor to your SE system
- flexible connectorization scheme supports most PC and Mac monitors

... and
for the ultimate
in computing power,

NewLife 33 SE

- accelerator running at 33 MHz for the Mac SE
- performance in the Mac IIx class

these ... at a fraction
of the cost

So take that old Mac out of the closet and put it back to work with today's software.

The World's Most Popular OCR

For tens of thousands of Macintosh® users around the world, *OmniPage*™ is the OCR product of choice, replacing needless keystrokes – just about eliminating the need to type. In fact, 8 out of 10 Macintosh users have made *OmniPage* their Omnifont OCR software of choice.

With *OmniPage* you can scan pages of text, numbers – even graphics – in minutes; and take it directly into almost any word processing, spreadsheet or database file. With *OmniPage* your computer can read virtually any font, no matter what size, or column format – so reading a magazine with multiple fonts and columns is just as easy as reading a single-page business letter.

Believe it or not there are still some Macintosh users out there who haven't

gotten the word about *OmniPage* – the fastest and most accurate OCR software on the market today. And that *OmniPage* can really make a difference in their business or profession – especially when it comes to turning around business reports, desktop published documents or presentations. Not to mention some of the other possibilities; including manuals, invoices, resumes, legal contracts, price lists, financial statements – multiple-page, compound documents.

Unleash the untapped power of your Macintosh. See for yourself why *OmniPage* has received *worldwide* acclaim and recognition as the OCR software product of the 90s. *OmniPage* from Caere, the Complete Recognition Company.

CAERE®

CLAIMS Vs. ACCLAIMS

A lot of manufacturers say they have the best trackball, but only the Kensington Turbo Mouse® has the awards to prove it.

MacUser gave it the coveted Five Mice. And the readers of Macworld magazine voted it "Best Input Device" — not just once but *four years in a row*.

What makes Turbo Mouse outshine the rest?

Superior optical hardware and unique software are the difference.

A light click sends the signal quietly and instantly.

One button transmits a normal mouse command. The other locks the button in the

down position for extended selection and graphic applications. You decide which button performs what function.

Press both buttons simultaneously, and our time-saving chording

feature executes one of seven useful commands such as "save," "print," "quit," or "undo."

Navigating the screen is easy. A comfortable ball position makes the cursor easy to move.

And a smooth ball movement means no jumping or sticking.

What's more, Turbo Mouse has unique software that lets you adjust both acceleration and double-click speed to exactly match the

way you work. Move the ball slowly and the cursor moves pixel-by-pixel. Move it fast and it speeds across even the biggest screen.

The next time you read another claim for a trackball, remember the one that has earned all the acclaims. Turbo Mouse.

For a free brochure, and the dealer nearest you, call 800-535-4242. Outside the U.S.A., call 415-572-2700.

KENSINGTON.
